Minutes of the Third Joint Meeting of the

ADVISORY COMMITTEES ON REGIONAL LAND USE PLANNING AND REGIONAL TRANSPORTATION SYSTEM PLANNING

DATE: January 15, 2014

 TIME: 9:30 a.m.
 PLACE: Tommy G. Thompson Youth Center, Meeting Room 5 Wisconsin State Fair Park 640 S. 84th Street Milwaukee, Wisconsin

Members Present

Committee on Regional Land Use Planning

Julie Anderson Directo	or of Public Works and Development Services, Racine County
Chair	
Robert J. Bauman	Alderman, City of Milwaukee
Andy M. Buehler	Director of Planning Operations, Kenosha County
Harlan E. Clinkenbeard	City Planner, City of Pewaukee
Michael P. Cotter	Director, Walworth County
	Land Use and Resource Management Department
Brent DesRoches (alternate for Sheri Schmi	t) Planning and Forecasting Engineer,
	Wisconsin Department of Transportation
Daniel F. Ertl	Director of Community Development, City of Brookfield
Vanessa Koster	Planning Manager,
	City of Milwaukee Department of City Development
Jeffrey B. Labahn Director	r, Community Development and Inspections, City of Kenosha
Mark Piotrowicz	City Planner/Operations Manager, City of West Bend
Sandy Scherer (alternate for Jason Fruth)	Senior Planner,
	Waukesha County Department of Parks and Land Use
Karen Schmiechen (alternate for Sheri Schn	nit) Program and Policy Analyst,
	Wisconsin Department of Transportation
Douglas Seymour	Director of Community Development, City of Oak Creek
Todd Stuebe	Director of Community Development, City of Glendale
Randy Tetzlaff Di	rector of Planning and Development, City of Port Washington
Mike Thompson (alternate for Eric Nitschke	e) NR Region Program Manager, Southeast Region,
	Wisconsin Department of Natural Resources

Committee on Regional Transportat	ion System Planning
Fred Abadi	Director of Public Works, City of Waukesha
John Bennett	City Engineer, City of Franklin
Scott Brandmeier	Director of Public Works and Village Engineer, Village of Fox Point
David E. Cox	Village Administrator, Village of Hartland
Brent DesRoches (alternate for Sher	i Schmit) Planning and Forecasting Engineer,
	Wisconsin Department of Transportation

Gary Evans	
Michael Eriedlanden (alternate for Dart Snanseller)	waukesna County Department of Public works
Michael Friedlander (alternate for Bart Sponsener).	
Michael Giugno	Annoning Director, Milwoukee County Trensit System
Tom Crise	Managing Director, Minwaukee County Transit System
10III OIIsaDiit	Aldormon City of Milwoulcon
Nik Kovac	Community Diannan Endered Highway Administration
	U.S. Department of Transportation,
Michael M. Lamons Directo	r of Public Works and City Engineer, City of Konosha
Michael Loughron (alternate for Chassen A. Korber	Department of Public Works
Michael Loughlan (alternate for Ghassan A. Korbar	i) Department of Fublic Works,
John Nordho (alternata for Sandra Bagunrá)	Wissonsin Department of Transportation
John Nordbo (alternate for Sandra Beauple)	City Engineer City of Milweykee
William D. Saga	Director of Engineering Village of Mt Discont
Villian D. Sasse	Dublic Information Assistant Milwaukaa County
Varan Schmigshan (alternate for Shari Schmit)	Drogrom and Policy Analyst
Karen Semmeenen (anernate for Sheri Semmit)	Wisconsin Department of Transportation
Laslia Sillatti (alternata for Jannifar Conda)	Mayor's Office. City of Milwaykaa
Mike Thompson (alternate for Eric Nitschka)	MP Dagion Program Managar, Southoast Dagion
while mompson (anemate for Ene witsenke)	Wisconsin Department of Natural Resources
Donnis Vaccorino Sonior Budget er	Misconsin Department of Natural Resources
Dennis Taccarno Senior Budget an	Department of Administration City of Milwaukaa
	Department of Administration, City of Milwaukee
Guests and Staff Present	
Stephen P. Adams	Public Involvement and Outreach Manager, SEWRPC
Ann Dee AllenSenior H	Public Involvement and Outreach Specialist, SEWRPC
Eric D. Lynde	.Principal Transportation Planner/Engineer, SEWRPC
Benjamin R. McKay	Principal Planner, SEWRPC
Kevin J. Muhs	Senior Transportation Planner, SEWRPC
Susan Morrison	Bureau of Planning and Economic Development,
	Wisconsin Department of Transportation
David A. Schilling	Principal Planner, SEWRPC
Kerry Thomas	Executive Director, TransitNOW
Kenneth R. Yunker	Executive Director, SEWRPC

CALL TO ORDER

Ms. Anderson called the joint meeting of the Advisory Committees on Regional Land Use Planning and Regional Transportation System Planning to order at 9:30 a.m., welcoming those in attendance. Ms. Anderson stated roll call would be accomplished through circulation of a sign-in sheet.

REVIEW AND APPROVAL OF MINUTES OF THE MEETING HELD ON NOVEMBER 18, 2013

Ms. Anderson asked if there were any questions or comments on the November 18, 2013, meeting minutes. There were none. She then asked for a motion to approve the meeting minutes. On a motion by

Mr. Labahn, seconded by Mr. Clinkenbeard, the November 18, 2013, meeting minutes were unanimously approved.

UPDATE ON VISION 2050 EFFORTS

Ms. Anderson noted there are three sub-items under this agenda item, including discussion of results of visioning activities to date, the draft VISION 2050 Guiding Statements, and development of sketch land use and transportation scenarios.

Results of Visioning Activities to Date

Ms. Anderson asked Mr. Muhs of the Commission staff to provide an overview of the results of visioning activities to date. Mr. Muhs noted initial visioning activities had been completed since the last report to the Committees on November 18, 2013. He stated the additional results were similar to the results previously reported to the Committees. Mr. Muhs also noted the second series of visioning activities and provided the opportunity to rate the draft series of VISION 2050 Guiding Statements. These workshops also include visioning stations where attendees can provide input on how to translate the Guiding Statements into sketch land use and transportation development scenarios. He noted the second series of workshops and five of the eight workshops hosted by organizations have been held. Mr. Muhs stated staff will compile the results of the second series of workshops once they are complete and post the results on the VISION 2050 website. He noted the results of the initial visioning activities are also on the VISION 2050 website (http://vision2050sewis.org/Vision2050/TheResults).

Draft VISION 2050 Guiding Statements

Ms. Anderson asked Mr. Muhs to review the draft VISION 2050 Guiding Statements (see Attachment 1). Mr. Muhs stated the input obtained during the initial visioning activities resulted in the draft series of Guiding Statements, intended to facilitate development of sketch land use and transportation development scenarios. The sketch scenarios will, in turn, form the basis of detailed alternative land use and transportation plans. He noted a first draft of the Guiding Statements was e-mailed to members of the Committees prior to the meeting for comment, staff having adjusted the draft Guiding Statements based on these comments. He stated the Guiding Statements will be further revised based on input from the second series of visioning workshops and any additional comments from members of the Committees. A revised set of Guiding Statements will be reviewed at an upcoming joint meeting of the Committees.

Development of Sketch Land Use and Transportation Scenarios

Ms. Anderson asked Mr. Muhs to provide an overview of possible sketch land use and transportation scenarios. Mr. Muhs noted an outline of possible land use and transportation scenarios was distributed to members attending the meeting (see Attachment 2). He stated the scenarios are meant to be conceptual alternatives of how the Region might look and function in the future, representing a range of possible futures for land use and transportation development that could achieve the Region's initial vision as generally identified by the Guiding Statements. He stated the third series of visioning workshops will focus on scenario planning. Members of the public could choose from the options shown in the outline or Commission staff could create pre-existing options and present them to the public at the workshops for comment. Mr. Yunker stated both the guiding statements and scenario outline will be revisited for approval by the Committees at a future meeting. He stated the Committees will be given the opportunity to review and comment on each individual guiding statement and the individual components of the scenario outline. Mr. Polenske asked if the data presented in Chapter II of the plan report will be used to

evaluate the scenarios. Mr. Yunker responded the data presented in Chapter II is inventory data and staff is developing indicators that will represent possible outcomes of various scenarios. He noted the scenarios are intended to be more broad and conceptual than the alternative plans and the evaluation of scenarios will not be as in-depth as the evaluation of alternative plans.

REVIEW AND CONSIDERATION OF PRELIMINARY DRAFTS OF THE FOLLOWING CHAPTERS OF SEWRPC PLANNING REPORT NO. 55, "VISION 2050: A REGIONAL LAND USE AND TRANSPORTATION SYSTEM PLAN FOR SOUTHEASTERN WISCONSIN"

- Volume I, Chapter II, "Existing Conditions and Trends: Population, Employment, and Land Use"
- Volume I, Chapter III, "Review of Currently Adopted Regional Land Use and Transportation System Plans"

Ms. Anderson noted there are two sub-items under this agenda item, including a review of Volume I, Chapter II of the plan report and Volume I, Chapter III of the plan report.

Volume I, Chapter II, "Existing Conditions and Trends: Population, Employment, and Land Use" Ms. Anderson asked Mr. Schilling of the Commission staff to review the preliminary draft of Volume I, Chapter II, "Existing Conditions and Trends: Population, Employment, and Land Use," of the regional land use and transportation plan (the chapter is available on the SEWRPC website: <u>http://www.sewrpc.org/SEWRPC/VISION_2050/2050RegLandUseTranspPlan.htm</u>). The following comments and discussion points were made during the review:

- 1. Mr. Bauman asked if race/ethnicity data are available by County. Mr. Yunker responded that this data would be included in the Chapter.
- 2. Mr. Yaccarino asked if data on wage trends are available. Mr. Yunker responded that this data is available in SEWRPC Technical Report No. 10, *The Economy of Southeastern Wisconsin*, and it can be included in the Chapter. Mr. Yaccarino asked if the Technical Report includes property value data. Mr. Yunker responded that it does not. Mr. Polenske suggested presenting the wage data by County. Mr. Bauman suggested including data for the City of Milwaukee because of the disparity between the City and the rest of Milwaukee County and the Region. He noted data on the availability of personal vehicles as an example. Mr. Yunker stated the data requested on race/ethnicity and income will be presented by county and the City of Milwaukee. He noted data on personal vehicle availability will be presented in Volume I, Chapter IV, "Inventory of Travel Facilities and Services," of the plan report.

Ms. Anderson asked if there were any further comments on the chapter. Hearing no further comments, Ms. Anderson asked for a motion to approve as revised the preliminary draft of Volume I, Chapter II, "Existing Conditions and Trends: Population, Employment, and Land Use." Mr. Clinkenbeard moved and Mr. Cox seconded the motion to approve the chapter with the understanding that the revisions suggested by Mr. Bauman and Mr. Yaccarino will be incorporated. Mr. Bauman asked if the purpose of the chapter is to describe the physical condition of the Region and broad population levels or if it is to show the human condition of the Region, noting the Milwaukee area's status as one of the most segregated large metropolitan areas in the Country. Mr. Yunker responded the chapter is intended to provide a high level snapshot of the Region, and the data requested will be added and presented for each Country and the City of Milwaukee. Ms. Koster suggested waiting for the vote on approval of the chapter until a revised draft can be reviewed. Mr. Yunker stated the planning process is running on a tight

schedule; however, waiting for approval of this chapter will not delay the start of other work. Mr. Thompson noted WDNR staff would provide some suggested edits regarding the air quality section following the meeting. Mr. Yunker indicated that Commission staff would incorporate these suggested edits. Mr. Grisa noted additions to the chapters during past regional planning efforts have typically been handled through review and approval of the meeting minutes. Mr. Polenske noted these additions change the scope of the chapter, and it may be helpful to see them in the context of a revised draft of the chapter. Mr. Yunker stated staff appreciates the current motion and noted that the suggestions are for additions to the draft chapter and not for revisions to the existing text. He stated a full revised draft could be considered for approval at a future meeting if the current motion and second are withdrawn. Mr. Clinkenbeard withdrew the motion and Mr. Cox withdrew the second. Mr. Polenske moved and Mr. Bauman seconded to layover consideration of the chapter to a future meeting to address the additions as discussed. The motion was approved unanimously.

[Secretary's Note: Following the meeting, Commission staff revised Chapter II as follows:

- Added information on the total population and households in the four largest cities in the Region and the remainder of those cities' respective counties.
- Added information on the minority and non-minority population and personal income levels in each of the seven counties, the four largest cities in the Region, and the remainder of those cities' respective counties.
- Added information on the job/housing analysis conducted as part of the recently adopted regional housing plan.
- Incorporated suggested edits to the air quality section received by WDNR staff following the meeting.]

Volume I, Chapter III, "Review of Currently Adopted Regional Land Use and Transportation System Plans"

Ms. Anderson asked Mr. Lynde of the Commission staff to review the preliminary draft of Volume I, Chapter III, "Review of Currently Adopted Regional Land Use and Transportation System Plans," of the regional land use and transportation plan (the chapter is available on the SEWRPC website: <u>http://www.sewrpc.org/SEWRPC/VISION_2050/2050RegLandUseTranspPlan.htm</u>). The following comments and discussion points were made during the review:

1. Mr. Kovac referred to Map III-2, and noted it shows growth between 2000 and 2010 that is both consistent and inconsistent with plan recommendations. He then noted that regional plan recommendations are advisory. Mr. Piotrowicz noted the need for town and county comprehensive plans to be consistent and asked if the county comprehensive plan has to be consistent with the regional transportation system plan. Mr. Yunker responded county comprehensive plans are not required to be consistent with the regional transportation plan. He noted the State comprehensive planning law does have language referencing consistency between county comprehensive plan transportation elements and the regional transportation plan, but it has not necessarily been followed. Mr. Clinkenbeard stated a regional level government would be needed to enforce consistency between comprehensive plans and regional plans. He stated that one purpose of the regional plans is to present basic planning data needed to develop local and county plans. He stated the regional land use plan is critical to the development of the regional

transportation plan, which is required by the Federal government. The land use plan, he noted, is advisory and must be realistic and take into account political feasibility. Mr. Yunker stated local and county governments must complete nine planning elements that are required by the State comprehensive planning law. He noted the Commission drafted a letter to the State Legislature urging the inclusion of a regional planning commission review requirement; however, no such requirement was included in the law.

- 2. Mr. Clinkenbeard referred to Map III-4, "Status of Major Parks Recommended Under the 2035 Regional Land Use Plan," and asked why Ryan Park in Waukesha County is not shown. Mr. Yunker responded the status of Ryan Park will be addressed in the meeting minutes.
 - [Secretary's Note: Major parks have an area of at least 250 acres and provide opportunities for a variety of resource-oriented outdoor recreational activities. Ryan Park is 204 acres in size and does not provide opportunities for a variety of activities. The development of Ryan Park will be monitored and its status will be updated at such time that it meets the major park criteria.]
- 3. Mr. Saunders referred to Map III-3 and noted the 76th/Brown Deer Road major economic activity center (formerly known as Northridge) is shown as having dropped below the threshold employment level in 2010. He noted other uses for this area are under consideration and it may warrant a longer term analysis. Mr. Yunker noted this particular analysis considers employment status as of 2010. He stated the City of Milwaukee comprehensive plan will be consulted to determine whether the area should be identified as a planned major economic activity center in the 2050 regional plan.
- 4. Ms. Koster noted the Milwaukee River Corridor is in the Milwaukee River Greenway Overlay Zone in the City of Milwaukee, which differs from a traditional conservancy zoning district. Mr. Yunker responded the overlay will be addressed in the chapter text.
 - [Secretary's Note: The following footnote has been added to the last full sentence on page III-13 after the term "local conservancy zoning":

"The portion of the Milwaukee River encompassed by primary environmental corridor in the City of Milwaukee between North Avenue and Hampton Avenue is covered by the Milwaukee River Greenway Overlay Zone. This overlay zone allows protection of the primary environmental corridor and sustainable development that is compatible with the City's comprehensive plan."]

5. Mr. Sasse referred to Map III-5, "Protection of Primary Environmental Corridors in the Region," and noted the Pike River Corridor in Racine County is not shown.

[Secretary's Note: The portion of the Pike River Corridor located in Racine County is classified as Secondary Environmental Corridor.]

6. Mr. Bauman asked if it was necessary that a highway project be identified in the recommended regional transportation plan in order to receive Federal funding. Mr. Yunker indicated that the Commission prepares a transportation improvement program (TIP) which lists all transit and

arterial highway projects proposed to use Federal funding over a four-year period, and that projects in the TIP need to be consistent with the regional transportation plan.

- 7. Mr. Yunker referred to Map III-8, "Public Transit Element of the Regional Transportation System Plan: Year 2035," and noted the recommended plan identifies high-speed rail and the Milwaukee Streetcar under fixed guideway routes. He then noted Map III-9, "Potential Rapid Transit Commuter Rail and Express Transit Bus Guideway/Light Rail Lines Under the Recommended Year 2035 Regional Transportation Plan," shows potential corridors for upgrading rapid and express transit service from bus lines to fixed guideway facilities. Mr. Ertl asked about the status of high-speed rail in the regional plan. Mr. Yunker responded discussion will be added regarding its implementation status.
 - [Secretary's Note: The following text has been added under a new subsection titled "High-Speed Rail Service" before the subsection titled "Rapid Transit Service" on page III-23:

"The planned high-speed rail line between Chicago, Milwaukee, and Madison will be developed and overseen by WisDOT, which received Federal funding for the project in January 2010. The planned high-speed rail line is intended to be part of an initial phase in the development of a Midwest high-speed rail network, developed in partnership with other Midwest states and Amtrak. Implementation of the planned Chicago-Milwaukee-Madison high-speed rail service will include improvements to Amtrak's existing Hiawatha Service operating between Chicago and Milwaukee and infrastructure improvements to allow service to continue to Madison, with trains reaching maximum speeds of 110 miles per hour between Milwaukee and Madison."

In addition, the following text has been added as a new paragraph following the first paragraph on page III-42:

"Implementation of WisDOT's planned Chicago-Milwaukee-Madison high-speed rail line was indefinitely postponed following withdrawal of the majority of the Federal funding awarded to the project by the U.S. Department of Transportation (USDOT) in December 2010. Despite its postponement, this proposed service remains a part of WisDOT's longrange state rail plan scheduled to be completed in 201. In addition, WisDOT is continuing efforts to increase service and improve travel times of Amtrak's existing Hiawatha Service operating between Chicago and Milwaukee."]

8. Mr. Kovac noted several communities prepared station area plans as part of the proposed Kenosha-Racine-Milwaukee (KRM) commuter rail line, demonstrating the link between land use and transportation planning. Mr. Lynde noted the station area plans were endorsed by most of the communities. Mr. Yunker noted some communities may incorporate the station area plans into their comprehensive plans, based on their perception of the status of the KRM project. Mr. Clinkenbeard asked if the KRM project is still in the regional plan. Mr. Yunker responded it was not removed from the 2035 regional transportation system plan.

- 9. Mr. Yunker referred to text on page III-41 and noted the public transit element of the 2035 regional transportation plan recommends a near doubling of public transit service by the plan design year. He noted that the plan assumed local dedicated funding, a regional transit authority (RTA), and adequate State funding would be provided to achieve this recommendation. Mr. Bauman stated the State Legislature could provide adequate funding to implement the public transit element of the 2035 transportation plan, similar to State funding of highway expansions, and that an RTA may not be necessary to achieve the plan's recommended transit service improvement and expansion. He noted the State committed to funding 10 percent of a proposed light rail line in the 1995-96 State biennial budget, and that the State had also committed to funding a certain portion of the proposed KRM project. Mr. Yunker noted local governments must provide a match to State funding from their property tax levies, and that the purpose of the text was to demonstrate that State legislation allowing for local dedicated funding and RTAs almost passed. He indicated that transportation funding would be considered during development of the recommended year 2050 regional land use and transportation plan.
 - The financial plan for the KRM commuter rail line—included in the New [Secretary's Note: Starts application submitted to the Federal Transit Administration in June 2010 and subsequently withdrawn in July 2011-assumed State capital assistance for the project under one or both of two State programs. The State Section 85.064 Commuter Rail Transit System Development program called for the State to pay up to half of the non-Federal share of annual project capital costs, at a maximum of 25 percent of project costs. The State Section 85.11 Southeast Wisconsin Transit Capital Assistance Program could have paid up to half of the non-Federal share of annual project capital costs or 25 percent of project costs, whichever is less, up to \$50 million. The financial plan assumed State operating assistance for the project under the State Section 85.20 Mass Transit Operating Assistance Program, which has provided has provided about \$100 million annually to fund local urban public transit system operations in Wisconsin.]
- 10. Mr. Yunker noted the text on the bottom of page III-41 and stated the amount of transit service in the Region has declined from the time of plan adoption in 2006 to 2012. There was a decrease of 7 percent in fixed-route bus service and an increase of 17 percent in demand-responsive service, which resulted in an overall 4 percent decrease in service.
- 11. Mr. Stuebe noted Map III-13 does not show portions of Port Washington Road in the City of Glendale. Mr. Yunker responded Port Washington Road is likely lying under IH-43 on the map because of their close proximity. He stated staff will modify the map to make Port Washington Road visible (see Attachment 3).
- 12. Mr. Lynde referred to the second paragraph on page III-43 and noted Kenosha County adopted a comprehensive bike plan in 2013, which could be referenced in the chapter as a recent example of a plan intended to implement the recommendations of the 2035 regional plan's bicycle and pedestrian element.

[Secretary's Note: The second paragraph on page III-43 was revised as follows:

"A number of local and county plans have been completed or are in development that will help to implement the recommendations of the regional plan's bicycle and pedestrian element. Examples include the Kenosha County Comprehensive Bike Plan completed in July 2013 and a bicycle plan for the City of Milwaukee that recommends a broad range of measures to improve conditions for bicycling in Milwaukee."]

- 13. Mr. Giugno referred to the third bullet on page III-45 and noted the Milwaukee County Transit System will not be installing "next bus" information signing at bus stops, but will instead be making next bus information available using new mobile technologies.
 - [Secretary's Note: The second sentence of the third bullet on page III-45 was revised as follows:

"Milwaukee County Transit System has initiated implementation of "next bus" information technology that is expected to be completed in 2014."]

- 14. Mr. Bauman referred to the discussion of vehicle-miles of travel (VMT) forecasts starting on page III-47 and asked if the latest VMT estimate for the Region is from 2008. Mr. Yunker noted that data from 2011 will be available soon and will be incorporated into the chapter. Mr. Bauman noted there appears to be a nationwide trend of declining annual VMT. Mr. Yunker indicated that the year 2050 forecasts will likely include a flattening trend in VMT, and noted that a recent report had been published by WISPIRG concluding that there had been about a 21 percent decrease in VMT per capita between 2006 and 2011 in the Milwaukee urbanized area. He referred to a handout distributed by Commission staff presenting the data for 2006 and 2011 used by WISPIRG in its report (see Attachment 4). He indicated that data for the Milwaukee urbanized area are reported to the Federal Highway Administration (FHWA) by the Wisconsin Department of Transportation (WisDOT), and that between 2006 and 2011 WisDOT changed their method of estimating VMT. He pointed out that the data showed a decline in VMT in the Milwaukee urbanized area almost entirely due to a 77 percent decline in VMT on local streets, which would not appear to be reasonable.
 - [Secretary's Note: Tables III-14 and III-15 were revised (see Attachment 5) and the last three sentences of the first paragraph on page III-48 were revised as follows:

"The latest regional vehicle-miles of travel estimate is for the year 2011, using WisDOT traffic counts in the Region for the years 2008 through 2012. In 2011, it is estimated that there were 40.9 million vehicle-miles of travel on the Region's arterial street and highway system on an average weekday. Forecast year 2011 vehicle-miles of travel in the Region under the year 2035 regional transportation plan totaled 43.5 million arterial system vehicle-miles of travel on an average weekday, approximately 2.6 million vehicle-miles, or about 6.4 percent, less than the estimated Region arterial vehicle-miles of travel on an average weekday in 2011."]

- 15. Mr. Bauman referred to the public transit bullet on page III-51 under the Summary and Conclusions Section for Part Three and stated the text regarding implementation of the public transit element of the year 2035 regional transportation system plan should be much stronger. He noted no new forms of public transit have been implemented and there was a 7 percent service decline in the existing fixed-route public transit system between 2006 and 2012. Mr. Bauman noted that implementation of the regional plan should result in positive outcomes, such as increased access to jobs and orderly growth. He suggested adding text that explains implementing in the interest of the public good and there are negative consequences to not implementing the plan. Mr. Yunker responded discussion about the consequences of not implementing the 2035 regional plan will be added to the chapter and will be reflected in the meeting minutes (see Attachment 6).
- 16. Mr. Clinkenbeard stated county and local governments are largely responsible for implementing the regional land use plan and the regional transportation plan serves the land use plan. Mr. Yunker responded this will be included in the discussion about the consequences of not implementing the regional plan. Mr. Yunker also noted there have been some successes in implementing the regional plan that can also be included in the discussion. An example is the protection of environmental corridors, which was not embraced by communities when first proposed in the 1960s, but is now widely embraced. Mr. Piotrowicz asked if all elements of the 2035 plan would be included in the discussion. Mr. Yunker responded all elements will be included. Mr. Clinkenbeard suggested avoiding political factors. Mr. Yunker stated the discussion will only include the consequences of not implementing the 2035 regional plan, such as decreased job accessibility.

Mr. Yunker noted the chapter as presented to the Committees could be approved and the suggestions discussed today will be added to the chapter. He stated that chapter additions can be approved by the Committees through review of the meeting minutes. Ms. Anderson asked if there were any further comments on the chapter. Hearing no further comments, Ms. Anderson asked for a motion to approve as revised the preliminary draft of Volume I, Chapter III, "*Review of the Currently Adopted Regional Land Use and Transportation System Plans.*" Mr. Clinkenbeard moved and Mr. Stuebe seconded the motion to approve the chapter with the understanding that the suggestions will be added as discussed. The motion was approved unanimously.

DISCUSSION OF SCHEDULE AND LOCATION OF FUTURE MEETINGS

Mr. Yunker stated the next joint meeting of the Advisory Committees is scheduled for March 12, 2014. He noted the Tommy Thompson Youth Center is not available and staff is considering suggestions for alternative locations received from members of the Committees. Mr. Yunker also noted there may be a need to hold a separate meeting of the Advisory Committee on Regional Transportation System Planning in February. He stated staff will notify members of both Committees of the meeting date in the next few weeks. He noted members of the Advisory Committee on Regional Land Use Planning are welcome to attend.

PUBLIC COMMENTS

Ms. Anderson asked if there were any public comments. There were none.

ADJOURNMENT

Ms. Anderson thanked everyone for attending and asked for a motion to adjourn the meeting. Mr. Clinkenbeard moved and Mr. Sasse seconded the motion to adjourn. The meeting was adjourned at 11:38 a.m.

Respectfully submitted,

Benjamin R. McKay Recording Secretary

PCE/DAS/BRM/EDL VISION 2050 - Joint AC Minutes - Mtg 3 - 1/15/14 (00215994).DOCX (PDF: #216795)

Attachment 1

DRAFT VISION 2050 GUIDING STATEMENTS

The following 15 draft VISION 2050 *Guiding Statements* express a preliminary vision for land use and transportation in the Region based on the key values and priorities expressed through initial visioning activities. These statements are intended to serve as a guide for how the Region should move forward and for developing "sketch" future land use and transportation scenarios. Note: no priority is implied by the order of these draft Guiding Statements.

One Region, Focusing on Our Future

1. Strengthen Existing Urban Areas

The individual character of desirable neighborhoods, including natural, historic, and cultural resources, should be preserved and protected and blighted neighborhoods should be renewed. New urban development and major job centers should occur through infill development, redevelopment, and development adjacent to existing urban areas.

2. Maintain Small Town Character

Small town character is part of the Region's identity. The individual character of communities in rural areas, including natural, historic, and cultural resources, should be preserved and protected.

3. Balance Jobs and Housing

Links between jobs and workers should be improved by providing affordable housing near job centers, increasing job opportunities near affordable housing, and improving public transit between job centers and affordable housing.

4. Achieve More Compact Development

Compact development creates desirable neighborhoods that are walkable and have a mix of uses, such as housing, businesses, schools, and parks. Future growth should occur in areas that can be readily provided with public services and facilities, and infill and redevelopment should be encouraged.

5. Preserve Natural Resources and Open Spaces

Natural resources provide many environmental and recreational benefits that cannot be replaced if they are eliminated or disturbed. Future growth and transportation investments should preserve and protect valuable natural features, including lakes, rivers, wetlands, floodplains, groundwater, woodlands, open spaces, natural areas, and fish and wildlife habitats.

6. Preserve Farmland

Productive farmland is vital to the health and economy of the Region. Future growth and transportation investments should preserve and protect productive farmland.

7. Be Environmentally Responsible

Sustainable land and transportation development and construction practices should be used to minimize the use of nonrenewable resources and reduce impacts on the local, regional, and global environment, such as impacts on air and water quality.

8. Develop an Integrated, Multimodal Transportation System

Safe, efficient, and convenient travel in the Region requires an integrated, multimodal transportation system, which provides choices among transportation modes. This system should provide a sufficient level of service for all modes to effectively serve the travel demand generated by the Region's land development pattern.

9. Develop an Expansive, Well-connected Bicycle Network

Bicycle and pedestrian travel in the Region should be encouraged as an alternative to personal vehicle travel. The network should provide on- and off-street bicycle connections that are safe, secure, and convenient.

10. Achieve a Robust, Regional Transit System

The Region's transit services should accommodate the travel needs of all residents, including travel that crosses municipal or county boundaries. Transit service should be fast, frequent, safe, and convenient in order to provide an alternative to personal vehicle travel.

11. Provide a High-quality Network of Streets and Highways

The Region's streets and highways need to be well maintained in order to continue to carry the overwhelming majority of personal and freight traffic in the Region. As roadways are reconstructed, modern design improvements should be included, with a focus on improving the efficiency and safety of the roadway and incorporating bicycle, pedestrian, and transit accommodations.

12. Ensure that Goods Move Efficiently

The considerable needs of the Region's businesses, industries, and freight companies must be a factor in the development of a balanced transportation system. Barriers to the efficient movement of goods within the Region and between the Region and other areas should be identified and addressed.

13. Prepare for Change in Travel Preferences and Technologies

New and expected trends in travel behavior should be considered when developing the Region's transportation system. Technologies that improve the ability and capacity to travel should also be considered.

14. Make Wise Infrastructure Investments

The benefits of specific investments in the Region's infrastructure must be weighed against the estimated costs of those investments. The limited funding available to the Region for infrastructure investments must be spent wisely.

15. Work Together Toward Common Goals

Cooperation and collaboration at the local, county, State, and Federal levels is necessary to address the land use and transportation issues facing the Region.

Attachment 2

DRAFT OUTLINE OF SKETCH VISION 2050 LAND USE AND TRANSPORTATION SCENARIOS

The following provides an outline of initial possible "sketch" land use and transportation scenarios developed by Commission staff for consideration by the Advisory Committees on Regional Land Use Planning and Regional Transportation System Planning. These scenarios are meant to be conceptual alternatives of how the Region might look and function in the future, representing a range of possible futures for land use and transportation which could achieve the Region's initial vision, as generally identified by the Guiding Statements.

LAND USE OPTIONS

- A. **<u>Baseline</u>** (Continuation of current trends.)
- B. Orderly Urban Growth (Similar to adopted Year 2035 Regional Land Use Plan. New development to occur largely as infill or redevelopment in existing urban centers, and at the immediate outer boundary of existing urban centers. Medium and high urban development densities will be emphasized, resulting in a reversal of trends in declining urban density.)
- C. <u>Compact Transit-Oriented Development</u> (New development to occur along major transit lines and particularly at transit stations. Emphasis on high urban development densities.)

HIGHWAY OPTIONS

- Maintain Existing System (Improvements limited to modernization to current design standards.)
- B. <u>Capacity Expansion</u> (Beyond improvements to current design standards, reconstruction of existing facilities to include additional traffic lanes and construction of new arterial facilities to address existing and future traffic congestion.)

TRANSIT OPTIONS

- A. <u>Maintain Existing System</u> (No improvements or expansion of service. Continuing current trends would result in service reduction.)
- B. <u>Significant Improvement/Expansion of Existing Services</u> (Near doubling of transit service including expansion of service area, hours, and frequency of service.
 Development of true express lines and service. Service to remain provided solely by buses.)
- C. <u>Significant Improvement/Expansion Including Fixed-Guideway Network</u> (Beyond a near doubling of transit service—including areas, hours, and service frequency—fixed guideway transit systems—rail or bus—would be developed.)

BICYCLE OPTIONS

- A. Incremental Accommodation and Off-Street Network (Bicycle facilities—bike lanes, wider curb lanes, paved shoulders—would be provided as arterials are reconstructed, and a regional system of off-street facilities would be developed.)
- C. <u>Expanded Accommodation and Off-Street Network</u> (Beyond bicycle facilities provided as part of arterial reconstruction, higher levels of bicycle accommodation would be provided—such as protected bicycle lanes—in key bicycle corridors. A regionwide system of off-street bicycle facilities would also be developed.)

#216782

Map III-13 (Revised)

FUNCTIONAL IMPROVEMENTS TO THE ARTERIAL STREET AND HIGHWAY SYSTEM IN MILWAUKEE **COUNTY: PROPOSED AMENDED YEAR 2035 REGIONAL TRANSPORTATION SYSTEM PLAN**

ARTERIAL STREET OR HIGHWAY

THE FOLLOWING NOTES SUPPLEMENT THE RECOMMENDATIONS PORTRAYED ON THIS MAP:

1. Each proposed arterial street and highway improvement, expansion, or preservation project would need to undergo preliminary engineering and environmental studies by the responsible State, county, or municipal government prior to implementation. The preliminary engineering and environmental studies will consider alternatives and impacts, and final decisions as to whether and how a plan and project will proceed to implementation will be made by the responsible State, county, or municipal government (State for state highways, County for county highways, and municipal for municipal arterial streets) at the conclusion of preliminary engineering. preliminary engineering.

2. The 127 miles of freeway widening proposed in the plan, and in particular the 19 miles of widening in the City of Milwaukee (IH 94 between the Zoo and Marquette interchanges and IH 43 between the Mitchell and Silver Spring interchanges), will undergo preliminary engineering and environmental impact statement by the Wisconsin Department of Transportation. During preliminary engineering, alternatives will be considered, including rebuild as-is, various options of rebuild no modern design standards, compromises to rebuilding the modern design standards. Control the building with the existing number of lanes. Only at the conclusion of preliminary engineering would a determination be made as to how the freeway would be reconstructed. as to how the freeway would be reconstructed.

The plan also provides further recommendations with respect to freeway half-interchanges. The plan recommends that the Wisconsin Department of Transportation, during the reconstruction of the freeway system:

--Convert the S. 27th Street with IH 94 interchange to a full interchange

--Consider as an alternative (where conditions permit) combining selected half-interchanges into one full interchange. (For example, STH 100 and S. 124th Street with IH 43.)

--Retain all other existing half-interchanges and examine during preliminary engineering the improvement of connection between adjacent interchanges.

4. The plan also recommends that during preliminary engineering for the reconstruction of STH 100 from W. Forest Home Avenue to IH 43, consideration be given to alternatives without additional traffic lanes, alternatives with additional traffic lanes or auxiliary lanes, and alternatives with frontage roads.

Summary and Conclusions for Part Two (replace this section in Chapter III starting on page III-16)

Part Two of this chapter has provided an overview of the currently adopted year 2035 regional land use plan and assessment of how well that plan is being implemented, focusing on the key plan recommendations. That assessment indicated the following:

Substantially Implemented Recommendations

- The regional plan recommends that urban development primarily occur in existing urban centers as infill development and redevelopment and within defined urban growth areas adjoining these centers. About 74 percent, or 40 square miles, of the 54 square miles of urban incremental development that occurred in the Region between 2000 and 2010 was consistent with regional plan recommendations.
- The vast majority of housing units constructed in the Region between 2000 and 2010—an estimated 72,100 housing units, or about 86 percent of the estimated total of 84,100 housing units built in the Region during the 2000s—was provided with public sanitary sewer service consistent with regional plan recommendations.
- The regional plan envisions a total of 60 major economic activity centers in the Region in the year 2035. By definition, these sites accommodate at least 3,500 total jobs or 2,000 retail jobs. Forty-five such sites existed in the Region in 2000. The regional plan recommended that these sites continue to serve as major centers and recommended an additional 15 major centers, all but one of which were at some stage of development when the regional plan was adopted. Of the 45 existing major centers in 2000, 44 retained their major center status in 2010.
- The regional plan recommends 32 major parks to serve the Region. Such parks have an area of at least 250 acres and provide opportunities for a variety of resource-oriented outdoor recreation activities. Of the 32 major parks identified in the plan, 24 sites had been substantially acquired and developed for park purposes by 2000. Six other sites experienced significant additional facility development in accordance with the plan during the 2000s, and land was acquired for two new sites recommended in the plan.
- The regional plan recommends the preservation in essentially natural, open use of the Region's primary environmental corridors. About 456 square miles, representing 94 percent of the total of 487 square miles of primary environmental corridors in the Region, were substantially protected from incompatible urban development in 2010.

Partially Implemented Recommendations

- The regional land use plan recommends an increase in residential land consistent with the forecast growth in the Region's population and households. Under the plan, about 23 square miles of land were anticipated to be converted to urban (high-, medium-, and low-density) residential use during the 2000s. The actual increase was about 26 square miles. Less new medium density residential development and more new low density residential development occurred than recommended in the plan. The plan envisioned an increase of almost 18 square miles in medium density residential land during the 2000s; the actual increase was about 10 square miles. The plan envisioned an increase of about 10 square miles. The plan envisioned an increase of about four square miles of low density residential land; the actual increase was about 13 square miles. The plan also envisioned an increase was just under three square miles.
- The regional plan would accommodate additional residential development in rural areas on a limited basis, recommending that such development occur at a density of no more than one housing unit per five acres, and be located outside prime agricultural lands. The plan recommends clustering homes at these densities using conservation subdivision design principles. An increase of two square miles of rural density residential land was envisioned during the 2000s; the actual increase was about seven square miles.
- The regional plan recommends that the most productive soils for agricultural purposes—agricultural capability Class I and Class II soil as classified by the U.S. Natural Resources Conservation Service—be preserved for agricultural use insofar as practicable. Under the plan, the conversion of Class I and Class II agricultural land to urban use would be confined, for the most part, to locations within planned urban service areas. Monitoring data indicate that about 15.5 square miles of Class I and Class II agricultural land were converted to urban use during the 2000s in locations consistent with the regional plan, with most of this occurring within planned urban service areas. The data further indicate that about 5 square miles of Class I and Class II agricultural land were converted to urban use in locations not consistent with the plan.
- Recently, the six counties in the Region that have substantial amounts of agricultural land (Kenosha, Ozaukee, Racine, Walworth, Washington, and Waukesha Counties) updated and extended their farmland preservation plans, identifying farmland preservation areas that are intended to be reserved for agriculture and agricultural-related uses. While large blocks of Class I and Class II agricultural land have been included in these farmland preservation areas, many farming areas with concentrations of Class I and Class II soils have been excluded. In general, the county farmland preservation plans identify farmland

preservation areas only where local government support for this has been demonstrated. In their local comprehensive plans, many communities have opted for less restrictive agricultural planning districts, often relying on agricultural-rural residential districts, which accommodate more residential development than would be allowed in an exclusive farmland preservation area. While such planning districts serve to maintain rural densities and rural character, they are not as effective as exclusive farmland preservation districts in preserving farmland.

Unimplemented Recommendation

• The regional plan recommends that new sub-urban density residential development, characterized by single family homes on lots of two to three acres, should be limited to development that is already committed in subdivision plats and certified surveys. About three square miles of undeveloped land were committed to sub-urban density residential development when the plan was prepared. Over six square miles were converted to sub-urban density residential development during the 2000s.

Conclusions

Implementation of the year 2035 regional land use plan would benefit the Region in several ways. Development would occur in a compact and efficient pattern that is readily served by basic urban services and facilities and maximizes the use of existing urban service and facility systems. Mixed use development would be accommodated in urban areas to provide for convenience and efficiency in day-to-day activities, including ease and efficiency in travel. The land development needs of the Region would be met while preserving the best remaining elements of the natural resource base and preserving productive farmland.

Several of the key regional plan recommendations were substantially implemented between 2000 and 2010. Almost all of the Region's primary environmental corridors, which contain most of the best remaining woodlands, wetlands, and wildlife habitat areas in the Region, were substantially protected from incompatible urban development in 2010. In addition, most of the new housing units built in the Region between 2000 and 2010 were provided with public sanitary sewer service in accordance with the regional plan and major economic activity centers and regional parks experienced continued development.

Other key recommendations were only partially implemented or not implemented. Much of the new urban development that occurred in the Region between 2000 and 2010 was located in accordance with regional plan recommendations; however, more residential development occurred at lower densities than recommended. New urban development in areas not in accordance with the regional plan was typically low density and sub-urban density residential development. Over development of lower density housing has several negative consequences, including:

- Urban development that cannot be efficiently served by urban services such as public sanitary sewer, water supply, and transit services;
- Sub-urban residential density development that is neither truly urban nor rural in character that would not generally occur in planned neighborhood units; would not be provided with public sanitary sewerage and water supply facilities; and would receive only minimal public services, such as public safety services;
- Higher conversion of agricultural and open land to urban development;
- Housing that may not be affordable to area workers because multi-family housing, two-family housing, and smaller single-family homes on smaller lots tend to be more affordable to a wide range of households than larger single-family homes on larger lots.

Summary and Conclusions for Part Three (replace this section in Chapter III starting on page III-48)

Part Three of this chapter has provided an overview of the Commission's currently adopted year 2035 regional transportation system plan and assessment of how well that plan is being implemented, focusing on the key plan recommendations. The currently adopted plan is its fifth generation plan, which was originally adopted in 2006 and amended on five occasions, including a review and reaffirmation of the plan that was completed in 2010.

The following are key concepts of the adopted regional transportation system plan as amended to date:

- The regional transportation system plan is designed to serve the travel demand generated by the year 2035 regional land use plan. The year 2035 regional land use plan was developed to represent a desired pattern of regional land use and not a projection of current land use development trends toward further decentralization of population, employment, and urban land uses.
- There are five elements of the year 2035 regional transportation system plan adopted in 2006: bicycle and pedestrian facilities, public transit, transportation systems management, travel demand management, arterial streets and highways. In addition, elements relating to transportation safety and transportation security were added in 2011 as refinements to the regional transportation system plan.
- Highway capacity additions were recommended in the regional transportation system plan to address the traffic congestion which may not be expected to be alleviated by land use, systems management, travel demand management, bicycle and pedestrian facilities, or public transit measures. The potential of transit, bicycle and pedestrian facilities, transportation system management, and travel demand management plan elements to alleviate congestion was first explicitly identified. Highway capacity additions were then

recommended to be added to the regional transportation plan to resolve, to the extent considered practicable, the residual existing and probable future traffic congestion.

The year 2035 regional transportation system plan was based upon forecasts of personal vehicle availability, weekday person trips and vehicle trips, vehicle-miles of travel, and transit ridership. The chapter included a review of these forecasts and comparison to actual current estimates, which indicates that the forecasts underlying the plan remain valid for long range planning.

Substantially Implemented Recommendations

• **Bicycle and pedestrian facilities:** The bicycle and pedestrian facilities element of the plan is designed to provide for safe accommodation of bicycle and pedestrian travel, encourage bicycle and pedestrian travel, and to provide modal choice. The plan element recommends that as the surface arterial street system of approximately 3,300 miles is resurfaced and reconstructed segment-by-segment, bicycle accommodation should be considered and implemented, if feasible, through bicycle lanes, widened outside travel lanes, widened shoulders, and separate bicycle paths. Additionally, the plan element also recommends development of 586 miles of off-street bicycle and pedestrian paths, along with 147 miles of surface arterial and non-arterial connections.

Approximately 203 miles of the planned 586 miles of off-street paths existed in 2006, and another 47 miles of the planned paths have since been constructed as of 2012. Also, with respect to recommended accommodation of bicycle travel on the regional arterial street system, WisDOT and FHWA now require such consideration during preliminary engineering conducted for State, county, and local arterial construction and reconstruction using Federal funds.

• **Transportation systems management:** The transportation systems management element of the plan included measures intended to manage and operate existing transportation facilities to their maximum carrying capacity and travel efficiency. The transportation systems management element of the plan includes the following four measures: freeway traffic management, surface arterial street and highway traffic management, major activity center parking management and guidance, and the preparation of a Regional Transportation Operations Program.

Implementation has included the expansion of freeway ramp-meters, variable message signs and closed circuit television cameras, and installation of a 511 travel information system. Other implementation has included additional traffic signal interconnection and coordination.

• **Travel demand management:** The travel demand management measures included in the recommended year 2035 regional transportation plan include measures intended to reduce personal and vehicular travel or to shift such travel to alternative times and routes, allowing for more efficient use of the existing capacity of the transportation system. Seven categories of travel demand management measures were recommended in the year 2035 plan: high-occupancy vehicle preferential treatment, park-ride lots, transit pricing, personal vehicle pricing, travel demand management promotion, transit information and marketing, and detailed site-specific neighborhood and major activity center land use plans.

Implementation has included expansion of park-ride lots, transit system internet trip planners, and automatic bus location systems, and development of site specific transit-oriented development neighborhood plans for the nine potential KRM commuter rail station areas.

Partially Implemented Recommendations

• Arterial street and highway system: The adopted regional transportation system plan as amended recommended three types of functional improvements to the arterial street and highway system: system preservation, consisting of the resurfacing and reconstruction necessary to properly maintain existing arterial roadways; system improvement, consisting of the widening of existing facilities to provide additional traffic lanes; and system expansion, consisting of the construction of new arterial facilities. About 3,209 miles, or 88 percent, of the total arterial street and highway system would require only preservation; about 360 miles, or about 10 percent, would require improvement; and about 93 miles, or about 2 percent, would constitute new facilities.

About 57.3 miles, or 13 percent, of the plan-recommended 453 miles of arterial capacity expansion have been completed and are open to traffic as of 2012. Also, a 30-mile segment of IH 94 between the Mitchell Interchange in Milwaukee County and the Wisconsin-Illinois State line is currently being reconstructed with additional traffic lanes and is planned to be completed in 2021. Reconstruction of the Mitchell Interchange and the portion of IH 94 from the Wisconsin-Illinois State line to STH 50 in Kenosha County was completed in 2012. With respect to the other major freeway-to-freeway interchanges in Southeastern Wisconsin, reconstruction of the Marquette Interchange—the largest and most complicated interchange—was completed in 2008. Reconstruction of the Zoo Interchange began in 2013 and is planned to be completed in 2018.

• **Transportation safety:** The safety element contained a review of the transportation safety objectives, principles, and standards documented in the adopted year 2035 regional transportation plan adopted in 2006, along with presenting a proposed expanded set of transportation safety objectives, principles, and

standards. The safety element also included listing and discussion of the recommendations of the year 2035 regional transportation plan which advance transportation safety. In addition, the element included recommendations for improved traffic crash and safety data, and recommendations for further study and improvements on those roadway segments with the most severe safety problems. The safety element was recently added to the plan (in 2011), so there has not been enough time to track its implementation.

• **Transportation security:** The security element provided an overview of transportation security and considered security-related issues and efforts that are ongoing to protect transportation networks and facilities at the Federal, State, and regional levels. The element also provided affirmation of the Commission's role in regional coordination of transportation security-related projects, along with the incorporation of security considerations into future transportation system preservation, improvement, or expansion projects. The security element was recently added to the plan (in 2011), so there has not been enough time to track its implementation.

Unimplemented Recommendations

• **Public transit:** The public transit element of the 2035 regional transportation system plan envisioned significant improvement and expansion of public transit in Southeastern Wisconsin, including development within the Region of a high-speed rail line, rapid transit and express transit systems, improvement of existing local bus service, and the integration of local bus service with the recommended rapid and express transit services. Altogether, service on the regional transit system would be nearly doubled from service levels existing in 2005 measured in terms of revenue transit vehicle-miles of service provided, from about 69,000 vehicle-miles of service on an average weekday in the year 2005 to 137,300 vehicle-miles of service in the year 2035.

Since adoption of the regional transportation plan in 2006, the amount of transit service has declined by about 4 percent (7 percent decrease in fixed route bus service and 17 percent increase in shared-ride taxi service) and transit fares have increased by amounts greater than general price inflation. The plan envisioned transit service increases beginning in 2008 at an annual rate of about 2 percent through the year 2035, and transit fare increases at the general rate of price inflation. It was recognized, however, that these plan recommendations may only occur upon achieving State legislation for dedicated funding and would be assisted by creation of a regional transit authority. State legislation for a regional transit authority with dedicated local funding, and State legislation for a regional transit authority with dedicated local funding, and State legislation for a regional transit authority with dedicated local funding the commuter rail line was dissolved. In addition, implementation of the planned high-speed rail line was indefinitely postponed following

withdrawal of Federal funding in December 2010, although high-speed rail remains a part of WisDOT's long-range state rail plan.

Conclusions

The year 2035 regional transportation system plan was guided by a vision for "a multimodal transportation system with high quality public transit, bicycle and pedestrian, and arterial street and highway elements." When implementation of any transportation plan element is not realized, this vision is not achieved and can have significant negative consequences.

This chapter has indicated that several of the key regional transportation system plan recommendations have been substantially implemented. Significant progress on the bicycle and pedestrian element was made as new off-street paths were constructed and on-street accommodation on highway construction and reconstruction projects has been required. Numerous transportation systems management and travel demand management measures have been continued, implemented, or expanded in accordance with the plan. Planned improvement and expansion of the arterial street and highway system has progressed, although implementation has generally been slower than anticipated due to limited available funding. In contrast to the other transportation plan elements, the public transit element has not been implemented. Instead, transit service levels have been declining since the year 2000 due to inadequate funding.

Insufficient funding, which has delayed implementation of arterial street and highway system recommendations, can have negative impacts associated with worsening pavement conditions and with traffic congestion, such as increased automobile-related emissions, vehicle crashes, and travel times. However, insufficient funding more severely affects public transit than highways because highway funding is largely capital funding for construction projects, while transit funding is largely operating funding for providing service. Lagging highway funding may result in project deferral or delay, but lagging transit funding results in service elimination or passenger fare increases. This is what has occurred for more than a decade in the Region, and may occur to an even greater extent in the future as Federal funding now in operating budgets may need to be used for capital projects, unused "banks" of Federal capital funding have been exhausted, and local funding through increases in property taxes is currently significantly constrained by State law. Recent and continuing service reductions and fare increases have significant negative consequences, including:

- Reduced access to jobs, health care, shopping, education, and other basic travel needs of those unable to use or afford a personal automobile;
- Reduced ability of public transit to provide congestion relief in the Region's most heavily travelled corridors, urban areas, and activity centers, in which it is not possible or desirable to accommodate all travel by automobile;

- A less-balanced, inefficient transportation system, which does not support higher development density and infill development and redevelopment;
- Increased air pollution and energy consumption, which is particularly important given recent and expected increases in gasoline prices; and
- Fewer transportation choices, as high-quality public transit helps to improve quality of life and to maintain and enhance the Region's economy.
