ASSESSMENT OF CONFORMITY OF THE YEAR 2000-2002 TRANSPORTATION IMPROVEMENT PROGRAM AND YEAR 2020 REGIONAL TRANSPORTATION SYSTEM PLAN WITH RESPECT TO THE STATE OF WISCONSIN AIR QUALITY IMPLEMENTATION PLAN-- SIX COUNTY SEVERE OZONE NONATTAINMENT AREA

INTRODUCTION

This report is intended to provide the basis for a determination that the year 2000-2002 transportation improvement program, and also the year 2020 regional transportation system plan are in conformance with the State of Wisconsin Implementation Plan for Air Quality, and, specifically, in conformance with the State Implementation Plan for Air Quality submitted to the U. S. Environmental Protection Agency (USEPA) by the Wisconsin Department of Natural Resources (WDNR) in November 1993, December 1995, and December 1997. The report is also intended to demonstrate that the year 2000-2002 Transportation Improvement Program serves to implement the year 2020 transportation plan.[1]

This finding of conformity is for the six-county severe nonattainment area for ozone standards within Southeastern Wisconsin, consisting of Kenosha, Milwaukee, Ozaukee, Racine, Washington, and Waukesha Counties.

An initial stage of the Federally required State Implementation Plan was submitted to the Federal government by the Wisconsin Department of Natural Resources in November 1993. That plan implements a set of actions required to achieve a 15 percent reduction in volatile organic compound emissions from 1990 to 1996. The plan included a 1996 budget for mobile source emissions in Southeastern Wisconsin. The U.S. Environmental Protection Agency (USEPA) approved Wisconsin's 15 percent plan in March 1996.

A maintenance plan for air quality was submitted for Walworth County by WDNR on December 15, 1995, and was approved by USEPA on August 26, 1996. The maintenance plan establishes year 2007 volatile organic compound and nitrogen oxides mobile source emissions budgets for Walworth County, as part of the State Implementation Plan for Air Quality.

The 1990 Clean Air Act Amendments originally required Wisconsin to submit an attainment demonstration State Implementation Plan for the six county severe ozone nonattainment area for the year 2007 by November of 1994. In recognition of the effect that the long range transport of ozone has on the air quality in the Lake Michigan region and other ozone nonattainment areas, the U.S. Environmental Protection

---

[1]*The year 2020 regional transportation plan is documented in SEWRPC Planning Report No. 46,* A Regional Transportation System Plan for Southeastern Wisconsin: 2020. *The 2000-2002 Transportation Improvement Program is documented in a report entitled,* A Transportation Improvement Program for Southeastern Wisconsin: 2000-2002.

Agency issued a Guidance Memorandum on March 2, 1995. The memorandum indicated that the attainment demonstration State Implementation Plan would require nonattainment areas such as Southeastern Wisconsin to commit to Phase I and Phase II activities. Phase I required Wisconsin to commit to a long range ozone transport study with a multi-state Ozone Transport Assessment Group (OTAG) and to continue to make Rate of Progress (ROP) reductions in ozone emissions at the rate of 3 percent per year. Phase II requires Wisconsin to develop a year 2007 attainment demonstration plan based on the results of the OTAG study when completed.

Wisconsin Bureau of Air Management staff were actively involved in the study of long range ozone transport with the OTAG. Wisconsin submitted on December 11, 1997, to the USEPA a nine percent Rate-of-Progress Plan which provided for 3 percent per year ozone emission reductions through 1999. The USEPA approved this plan on November 3, 1999, including a 1999 mobile source emissions budget for volatile organic compounds. The Wisconsin Department of Natural Resources is currently preparing the attainment plan for ozone for southeastern Wisconsin, and the current schedule for submittal of the plan to USEPA is December 2000.

The U. S. Environmental Protection Agency and U. S. Department of Transportation have established criteria and procedures to be used by a Metropolitan Planning Organization (MPO) in making conformity determinations of regional transportation system plans and transportation improvement programs. The Southeastern Wisconsin Regional Planning Commission is the gubernatorially designated Federal MPO for the Kenosha, Milwaukee, and Racine urbanized areas. The conformity criteria established by the U. S. Environmental Protection Agency were set forth in the November 24, 1993, Federal Register (40CFR Part 51), and criteria with respect to both volatile organic compounds and nitrogen oxides apply to Southeastern Wisconsin. Amendments to those conformity criteria were established by the U. S. Environmental Protection Agency in the August 29, 1993; November 14, 1995; and August 15, 1997 Federal Register. These Federal regulations identify the conformity criteria which should be applied at this time with respect to the six county severe ozone nonattainment area and to Walworth County as a maintenance area. The Commission, the Wisconsin Department of Natural Resources, and the Wisconsin Department of Transportation have adopted a memorandum of agreement regarding the conduct of transportation plan and program conformity determinations, which has been approved by the U. S. Environmental Protection Agency.

The U. S. Environmental Protection Agency has advised the Regional Planning Commission staff that the conformity criteria which--given the existing situation--should now be applied to the six county area with respect to volatile organic compounds require the satisfaction of emission budget tests, as well as emission reduction tests. With respect to nitrogen oxides, no conformity criteria apply, and no conformity test or determination is required, as a nitrogen oxides waiver, including with respect to transportation conformity, is in effect in the six county area. With respect to Walworth County, the conformity criteria require

satisfaction of the emission budget with respect to both volatile organic compounds and nitrogen oxide mobile source emissions. Appendix A provides a summary of the interagency meeting held on December 2, 1999, to identify the conformity criteria and tests which should be applied in this conformity determination. The principal agencies involved in this meeting were the Southeastern Wisconsin Regional Planning Commission, Wisconsin Department of Transportation, Wisconsin Department of Natural Resources, U. S. Department of Transportation, Federal Highway Administration, and U. S. Environmental Protection Agency.

The next section of this report describes the regional transportation system plan for the year 2020 for the seven-county Southeastern Wisconsin Region. The following section describes the 2000-2002 transportation improvement program which continues to implement the plan. The remaining sections of this report then identify the specific conformity procedure requirements and conformity determination criteria which have been established by the U. S. Environmental Protection Agency for use in the determination of transportation system plan and improvement program conformity. These sections also indicate the extent to which the conformity analysis and the transportation improvement program, as well as the regional transportation system plan, meet each of these requirements and criteria. The assessment of conformity with respect to each requirement and criterion concludes that the year 2020 regional transportation system plan and the 2000- 2002 transportation improvement program are in conformance with the State Implementation Plan for Air Quality in the six county severe ozone nonattainment area.

It is important to note that the regional transportation system plan for Southeastern Wisconsin and the State Implementation Plan for Air Quality, and the transportation improvement program, have been prepared in a cooperative manner by the Regional Planning Commission and the Wisconsin Department of Natural Resources. The preparation of the two plans has been extensively coordinated. The same inventories and forecasts of vehicle-miles of travel and air pollutant emissions utilized in the preparation of regional transportation system plans have been used in the preparation of the State Implementation Plan. The emission factors which the Commission utilized to estimate the air pollutant emissions under the regional transportation system plan and transportation improvement program, and in the preparation of this conformity determination of the transportation plan and program were provided by the Wisconsin Department of Natural Resources and are the emission factors that the Department utilizes in the preparation of the State Implementation Plan. In addition, the Wisconsin Department of Natural Resources has relied upon the regional transportation system plan for the identification and evaluation of transportation control measures considered for incorporation into the State Implementation Plan.

REGIONAL TRANSPORTATION SYSTEM PLAN FOR SOUTHEASTERN WISCONSIN: 2020

The design year 2020 regional transportation system plan is an extension in time of the design year 2010 plan, which was completed and adopted by the Commission in December 1994. The year 2020 plan is documented in SEWRPC Planning Report No. 46, *A Regional Transportation System Plan for Southeastern Wisconsin: 2020*, and the previous year 2010 plan is documented in SEWRPC Planning Report No. 41, *A Regional Transportation System Plan for Southeastern Wisconsin: 2010.* The year 2020 regional transportation system plan is based upon a year 2020 regional land use plan, which seeks to preserve and enhance the environment within the Region, including the containment of urban sprawl, the preservation of environmental corridors, and the preservation of prime agricultural lands. The year 2010 regional land use and transportation plans, upon which the new year 2020 plans are based, have been adopted by the County Boards of all of the seven counties comprising the Southeastern Wisconsin Region as their official guide to land use and transportation development, and have also been endorsed by the Wisconsin Department of Transportation.

The regional transportation system plan has been developed to meet the requirements of a Federally defined congestion management system, including the definition of performance measures to establish congestion problems and to assist in the evaluation of alternative measures to address congestion and the evaluation and recommendation of alternative measures to resolve the identified congestion problems. The development and evaluation of transportation alternatives which would address existing and anticipated future traffic congestion problems was done in a disciplined way so as to ensure that highway capacity expansion projects were proposed for inclusion in the plan only as a last resort. Appropriate, detailed, quantified attention was paid to determining the extent to which a wide variety of transportation system management measures, including pricing, land use, traffic management, and transit, could be used to resolve congestion problems. Once that extent was determined, highway capacity improvement proposals were placed into the plan to resolve most, but not all, of the residual congestion problems. The data collection and monitoring of the levels of the identified performance measures, and of the implementation of the recommended transportation actions and their effectiveness is proposed to be conducted on a three-year cycle along with transportation system plan appraisal.

Also, the year 2020 transportation system plan has been developed to be fiscally constrained, pursuant to U. S. Department of Transportation metropolitan planning regulations (23CFR Part 450). The total costs of the transportation plan, including both capital and operating costs, were estimated and compared to existing available Federal, State, and local revenues. All funding shortfalls were identified and proposed new revenue sources and strategies to obtain these new revenues were proposed. In addition, the funding attendant to implementing the plan through the transportation improvement program is consistent with existing available Federal, State and local revenues.

Land Use Plan

The regional transportation system plan is designed to serve the adopted regional land use plan for the year 2020. The adopted design year 2020 regional land use plan is described in summary form in Chapter III entitled, "Regional Growth and Change and the Year 2020 Regional Land Use Plan," of SEWRPC Planning Report No. 46, *A Regional Transportation System Plan for Southeastern Wisconsin: 2020*, and is fully documented in SEWRPC Planning Report No. 45, *A Regional Land Use Plan for Southeastern Wisconsin: 2020*. The regional land use plan recommends attainment of a centralized regional settlement pattern and seeks to control and reverse current land use development trends. The plan, as shown on Map 1, recommends stabilization and revitalization of the urban centers of the Region, particularly of the Milwaukee, Racine, and Kenosha urbanized areas. It recommends that new urban development be encouraged to occur largely as infill in existing urban centers, and in defined urban growth areas emanating outward from the existing urban centers of the Region. Moreover, new urban development in the defined urban growth areas is proposed to occur at densities which can efficiently and effectively support essential urban services, including water supply, sanitary sewerage, and importantly, public transit.

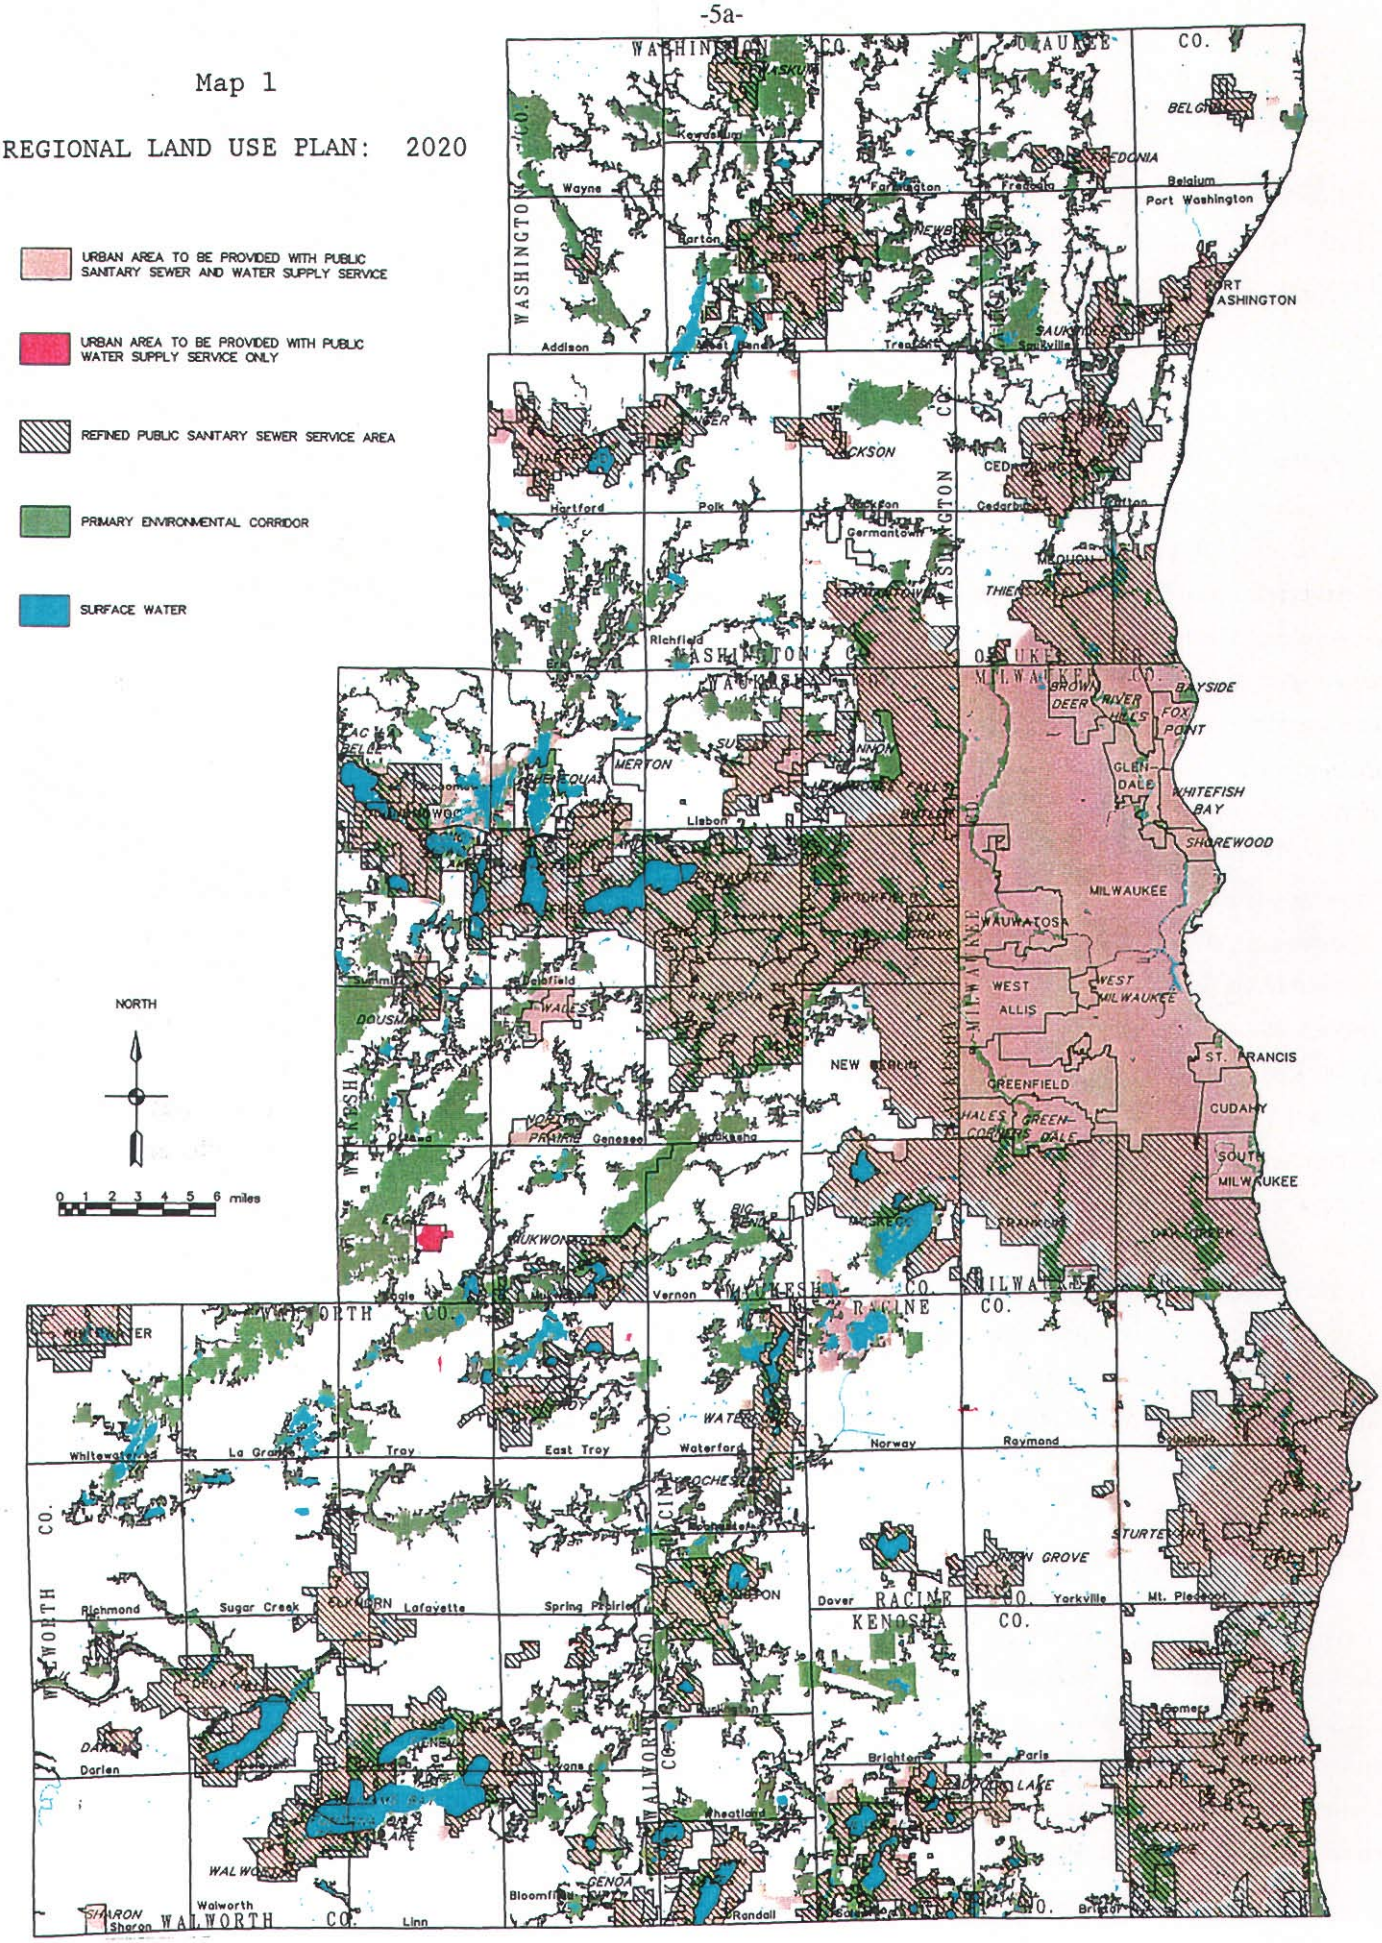
The plan also seeks to discourage and reduce urban sprawl, which typically involves use of onsite sewage disposal and water supply facilities. Such decentralized development is costly and difficult, if not impossible, to serve efficiently with public transit, and reduces the potential for carpooling. In addition, the number of trips required to serve such development and the length of those trips may be expected to be higher than for comparable centralized development. Urban development occurring in a scattered, low-density pattern also results in a demand for urban facilities and services, such as improved highways, throughout a widespread area of mixed rural-urban land uses, and can result in conflicts with, and diseconomies for, remaining agricultural uses.

Although the land use plan envisions continued reliance on the private land market as the major determinant of the location, density, and character of future land use development within the Region, it proposes to influence the operation of that market and its effects on land use development through public land use development regulations in order to promote a more orderly and economic regional development pattern, to avoid intensification of existing and the creation of new areawide developmental and environmental problems, and to achieve a more healthful and attractive, as well as more efficient, regional settlement pattern.

The plan seeks to influence the operation of the private land market in three significant ways. First, the plan recommends that urban development be encouraged to occur only in those areas of the Region which are covered by soils suitable for such development; which are not subject to special hazards, such as flooding and shoreline erosion; and which can be readily served by essential municipal facilities and services, including centralized public sanitary sewerage, water supply, and public transit service. The plan further recommends that new residential development in the defined urban growth areas occur primarily in planned

Map 1

REGIONAL LAND USE PLAN: 2020



Source: SEWRPC.

neighborhoods at medium urban densities, averaging about five dwelling units per net residential acre. In this respect, the plan seeks to moderate the declining trend in urban population density experienced within the Region. The plan envisions a total of 27 major industrial centers and 18 major commercial centers within existing urban areas and areas proposed to be converted to urban use by the plan design year 2020.

Second, the plan recommends the protection of all remaining primary environmental corridors of the Region from intrusion by incompatible urban development, and discourages the location of urban development, as well, in the secondary environmental corridors and isolated natural areas. The primary environmental corridors encompass only about 17 percent of the total area of the Region and include all the major lakes and streams and most of the associated undeveloped shorelands and floodlands; most of the best remaining woodlands, wetlands, and wildlife habitat areas; areas with rough topography and significant geologic formations; most of the best remaining sites having scenic, historic, and scientific value; the major groundwater recharge and discharge areas; and many existing park sites and most of the best remaining potential park sites. The preservation of these corridors is important to the maintenance of a high level of environmental quality in the Region, to the protection of its natural beauty and cultural heritage, and to the provision of opportunities for certain scientific, educational, and recreational activities. The exclusion of urban development from these corridors will also prevent the creation of serious and costly development problems, such as wet and flooded basements, pavement and building foundation failures, and excessive clearwater infiltration and inflow into sanitary sewerage facilities.

Third, the plan recommends the retention in essentially rural use of almost all remaining prime agricultural lands, consisting of the most productive farmlands and units in the Region. Protection and preservation of this prime agricultural land is recommended not only for economic reasons, but also to assure the wholesomeness of the future regional environment and to contribute to the preservation of the unique cultural heritage of the Region, as well as of its natural beauty.

Although the adopted regional land use plan contains many other recommendations for guiding land use development within the Region into a better settlement pattern, the three recommendations summarized above are the most important.

The regional transportation system plan is designed to serve the regional land use plan and not a projection of current land use development trends toward further decentralization of population, employment, and urban land uses. Thus, if transportation facilities and services do indeed shape land use development, implementation of the transportation system plan should promote implementation of the land use plan, which recommends a desirable pattern of future land use with respect to travel requirements.

Transportation System Plan

The year 2020 transportation system plan has three principal components: public transit, transportation systems management, and arterial streets and highways. These three components are described in the following sections.

Public Transit: The regional transportation system plan calls for major increases in the levels of rapid and express transit service provided within the Region, as well as increases in the level of local service provided (see Table 1). The plan proposes the development of a true system of rapid and express transit routes integrated with local transit service. Rapid transit routes would operate within all major travel corridors oriented to the Milwaukee central business district (CBD), with express transit operating over a grid pattern of routes largely within Milwaukee County. In total, the plan proposes an approximately 69 percent increase in transit service as measured by vehicle-miles of service, from the current 66,100 vehicle-miles of such service in 1995 to 111,500 vehicle-miles in 2020. This increase embodies the combined effects of proposed improvements in the frequency of operation of rapid and express transit and the additions and extensions of rapid, express, and local transit routes. The transit recommendations are shown in graphic summary form on Map 2.

Rapid Transit: The plan recommends that existing freeway flyer bus service within the Region continue to be operated from the Milwaukee CBD southwesterly to the Village of Mukwonago and westerly to the Cities of Waukesha and Oconomowoc, and northerly to the Cities of Mequon, Cedarburg, and Port Washington. The plan also proposes the enhancement of the level of freeway flyer bus service provided in these corridors. The plan also calls for the expansion of such service in the south corridor to the Cities of Racine and Kenosha, and in the northwest corridor from its current terminus at the Pilgrim Road transit station in the Village of Menomonee Falls to the City of West Bend. The network of rapid transit routes is shown in red on Map 2. The planned rapid transit system would serve intermediate stations spaced about every three to five miles and would provide service in both directions during both peak periods.

The plan recommends that the number of rapid transit revenue vehicle-miles of service provided be increased by 11,900 vehicle-miles, from 3,800 in 1995 to 14,700 by 2020. Similarly, the plan recommends that the number of rapid transit revenue vehicle-hours of service be increased by 400 vehicle-hours, from 200 in 1995 to 600 by 2020.

The rapid transit service provided under the recommended plan would operate primarily during peak periods, from 6:00 a.m. to 8:30 a.m. and from 3:30 p.m. to 6:30 p.m. on weekdays. Midday service would be provided over some routes, with limited weekend and evening service. Headways on the rapid transit system would range from five to 30 minutes during peak periods to 30 to 60 minutes during off-peak periods over those routes provided with service during the midday.

Table 1

TRANSIT SYSTEM OPERATING CHARACTERISTICS IN THE REGION: 1995 AND 2020 FINAL RECOMMENDED PLAN

Transit Service Characteristics	Existing 1995	2020
Round-Trip Route Length (miles)		
Rapid Routes	523	1,360
Express Routes	437	430
Local Routes		
Kenosha Urbanized Area	192	210
Milwaukee Urbanized Area	1,135	1,530
Racine Urbanized Area	186	200
Subtotal	1,513	1,940
Total	2,473	3,730
Average Weekday Vehicle Requirements[a]		
Peak Period	537	819
Midday Off-Peak Period	286	375
Revenue Vehicle-Miles (average weekday)		
Rapid	3,800	14,700
Express	5,500	21,500
Local	56,800	75,300
Total	66,100	111,500
Revenue Vehicle-Hours (average weekday)		
Rapid	200	600
Express	320	1,400
Local	4,810	6,600
Total	5,330	8,600

[a] *Represents only the vehicles required for daily system operation. Excludes vehicles needed as spare or backup.*

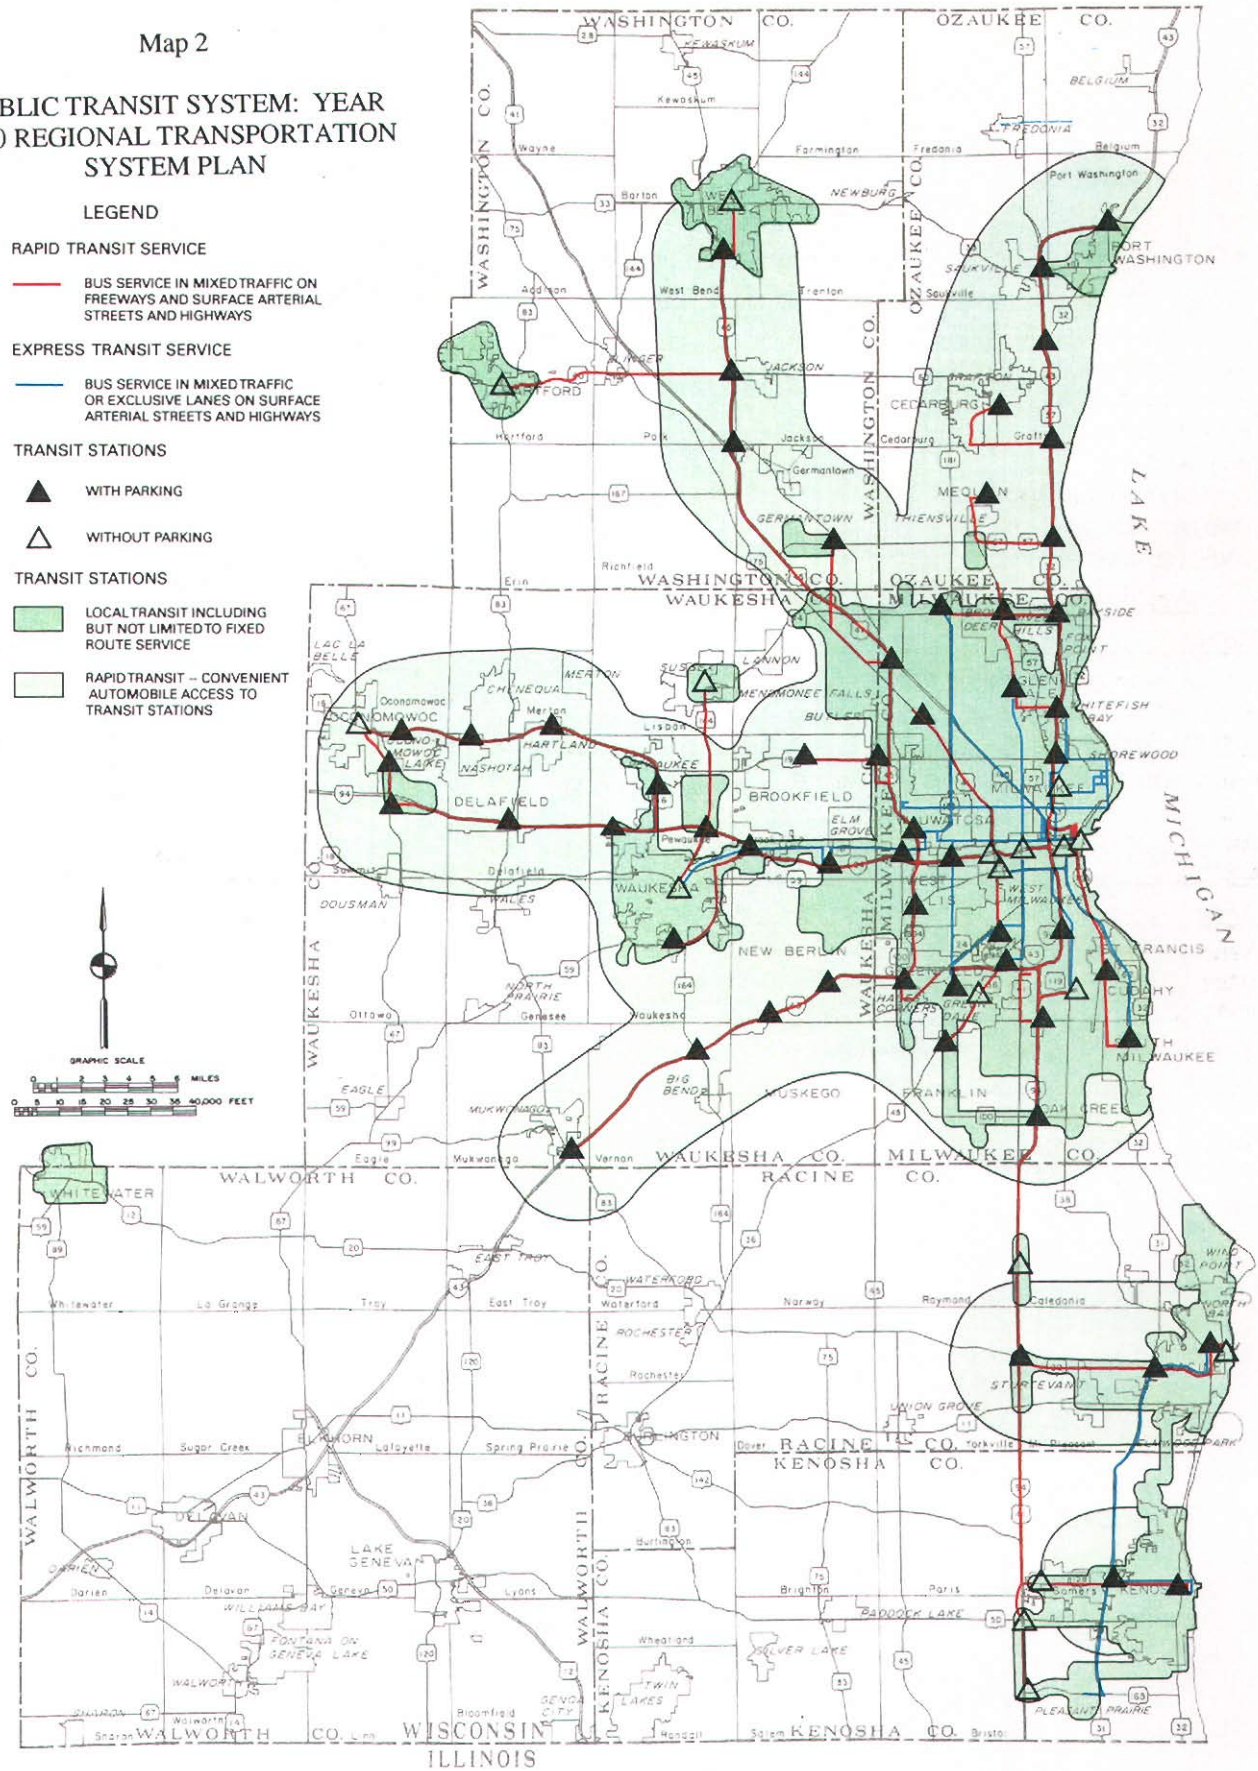
Map 2

PUBLIC TRANSIT SYSTEM: YEAR 2020 REGIONAL TRANSPORTATION SYSTEM PLAN



Under the regional transportation system plan, rapid transit busway/high-occupancy-vehicle facilities, rapid transit commuter rail facilities, and express transit light rail facilities would be considered as alternatives to motor-bus transit service over arterial street and highway lanes. Consideration of such fixed-guideway transit service facilities would be initiated as part of federally required detailed transit planning alternatives analysis studies for each of the corridors identified under the plan. The potential corridors for busway, commuter rail, and light rail facilities are shown on Maps 30 and 31 of SEWRPC Planning Report No. 46, *A Regional Transportation System Plan for Southeastern Wisconsin: 2020*, December 1997. The implementation of these fixed-guideway transit facilities would depend upon the outcome of the corridor studies. Upon completion of each study, the local units of government concerned—particularly, the potential transit operator involved—the Wisconsin Department of Transportation, and the Regional Planning Commission would have to affirm the study findings and, if necessary, amend the regional transportation system plan.

The fares for rapid transit service would remain at the current 1997 levels, adjusted only for future general price inflation. The freeway flyer rapid transit bus fare for a trip within Milwaukee County would be $1.60. The fare charged for a trip between points within Milwaukee County and the limits of the Milwaukee urbanized area would be $2.10. The fare charged for a trip between the Milwaukee CBD and the outer limits of the rapid transit system would be $3.10.

The plan identifies a potential system of about 60 miles of exclusive busway and high-occupancy vehicle (HOV) facilities (see Map 31 of SEWRPC Planning Report No. 46, *A Regional Transportation System Plan for Southeastern Wisconsin: 2020*). These facilities would be located within, or parallel to, the most heavily congested freeway corridors. The ultimate decision concerning the provision of such facilities would be made following detailed corridor alternatives analysis study/preliminary engineering study/final environmental impact statement of the corridors. Therefore, these facilities have not been explicitly included in the regional transportation plan and the conformity determination of the plan. An alternatives analysis is underway in the Milwaukee CBD investigating bus, light rail, and historic trolley transit circulator systems.

The plan also recognizes the potential to establish commuter-rail passenger service as an alternative to freeway flyer or exclusive busway rapid transit service in four major Milwaukee-oriented travel corridors: from Milwaukee through the Cities of St. Francis, Cudahy, South Milwaukee, Oak Creek, and Racine to the City of Kenosha over the CP Rail System (former Chicago, Milwaukee, St. Paul & Pacific Railroad Company) and Chicago & North Western Transportation Company railway lines; from Milwaukee through the City of Wauwatosa, Village of Elm Grove, City of Brookfield, Village of Pewaukee, Village of Hartland, City of Delafield, and Village of Nashotah to the City of Oconomowoc over the CP Rail system (former Chicago, Milwaukee, St. Paul & Pacific Railroad Company) railway lines; from Milwaukee through Villages of Germantown and Jackson to the City of West Bend over the CP Rail System (former Chicago, Milwaukee, St. Paul & Pacific Railroad Company), Chicago & North Western Transportation Company, and Wisconsin Central Transportation Corporation (former Chicago & North Western Transportation Company) railway lines; and from Milwaukee through the Village of Brown Deer, City of Cedarburg, and Village of Grafton to the Village of Saukville over the CP Rail System and Wisconsin Central Transportation Corporation (former Chicago, Milwaukee, St. Paul & Pacific Railroad Company) railway lines. The plan also recognizes the potential to provide commuter-rail passenger service in two Chicago-oriented corridors: from the Village of Walworth through Fox Lake, Illinois, to Chicago over Wisconsin & Southern Railroad Company and Metra railway lines (former Chicago, Milwaukee, St. Paul &.Pacific Railroad Company) and from the City of Burlington through the Village of Silver Lake and Antioch, Illinois, to Chicago over Wisconsin Central Transportation Company railway lines (former Soo Line Railroad Company) (see Map 30 of SEWRPC Planning Report No. 46, *A Regional Transportation system Plan for southeastern Wisconsin: 2020*). Corridor alternatives analysis studies would be required for these potential commuter rail facilities and services; as a result, these facilities and services are not explicitly included in

the regional plan and its conformity determination. Feasibility studies—a precursor to alternatives analysis studies—are underway in two potential commuter rail corridors—Burlington to Chicago, and Walworth to Chicago—and have been completed in the Milwaukee to Kenosha corridor. A transit alternatives analysis study is underway in the Milwaukee to Kenosha corridor.

Express Transit: The regional transportation system plan recommends that 12 regular express transit bus routes be provided in a grid pattern, largely within Milwaukee County. Within the Milwaukee urbanized area, the express transit would be provided in major travel corridors to connect major activity centers, including the Milwaukee CBD and high- and medium-density residential areas. One express transit route would also connect the CBD's of the Cities of Racine and Kenosha. The planned express routes are shown in blue on Map 2.

Five travel corridors are identified in the plan as having potential for light-rail express or express bus guideway transit service and would represent upgrading of the proposed express bus transit routes. (See Map 31 of SEWRPC Planning Report No. 46, *A Regional Transportation system Plan for southeastern Wisconsin: 2020*). The ultimate decision concerning the provision of light-rail or express bus guideway facilities in these corridors would be determined in Federally required alternative analysis studies/preliminary engineering studies/final environmental impact statements. Therefore, these facilities have not been explicitly included in the regional transportation plan and the conformity determination of the plan. The potential light-rail or express bus guideway facilities are envisioned to operate with preferential treatment over reserved street lanes within street rights-of-way or over exclusive rights-of-way, such as along railway or former electric interurban railway rights-of-way. Light-rail and express bus guideway operating characteristics may be expected to vary, depending upon the type of right-of-way and adjacent development and attendant station spacing, and may approach rapid transit operating characteristics. An alternatives analysis is underway in the Milwaukee CBD investigating bus, light rail, and historic trolley transit circulator system alternatives.

Under the plan, the extent of express transit service would be significantly expanded through the provision of a grid of express routes. The frequency of operation of transit vehicles over the express routes would also be significantly increased. As shown in Table 1, the number of vehicle-miles provided on an average weekday would increase by 16,000 vehicle-miles, from about 5,500 in 1995 to about 21,500 in 2020. Similarly, vehicle-hours of express service provided on an average weekday would increase by 1,080 vehicle-hours, from 320 in 1995 to 1,400 in 2020.

Express transit service would be provided on weekdays from 6:00 a.m. to 6:00 p.m. on all routes and during weekday evenings and weekends on some routes. Peak-period headways would range from five to 15 minutes in the Milwaukee urbanized area and extend to 30 minutes on the route connecting Racine and Kenosha. Off-peak headways would range from 20 to 30 minutes within the Milwaukee urbanized area to

60 minutes on the Racine-Kenosha route. Express transit fares would remain at 1997 levels, $1.35 in Milwaukee County and $1.00 on the Racine-Kenosha route. It is assumed that these fares would increase with general price inflation over the plan design period.

Local Transit: The level of local service envisioned in the plan consists of buses operating over arterial and collector streets, with frequent stops for passenger boarding and alighting. Local fixed-route service would continue to be provided and would be extended within Milwaukee County and the Cities of Waukesha, Racine, and Kenosha and their environs. The plan recommends that the local transit operators undertake detailed implementation studies to identify the best way to provide for service enhancement and extensions, holding open the possibility of transit-center oriented local route systems, and route-deviation or demand-responsive systems to replace, in some areas, existing and potential extensions of grid route systems. As shown on Map 2, these areas of expanded service are generally located in southern and northern Milwaukee County and in the most heavily developed portions of Waukesha County. Under the plan, local transit service would operate over 75,300 vehicle-miles of service on an average weekday round trip route-miles within the Region, representing an increase of 18,500 vehicle-miles, or 33 percent, over the approximately 56,800 vehicle-miles provided in 1995.

The frequency of local transit service would be substantially improved over 1995 levels. Within Milwaukee County, peak-period headways on the major routes in the area south of Silver Spring Drive, east of 76th Street, and north of Layton Avenue would be improved from 10 to 40 minutes to 10 minutes. Peak-period headways in the Racine and Kenosha urban areas would be improved from 20 to 30 minutes to 15 to 30 minutes. Peak-period headways in the Waukesha urban area would be improved such that all routes would operate at 30-minute headways.

Under the plan, local transit fares would remain at 1997 levels, adjusted only for the effects of general price inflation. Accordingly, fares within Milwaukee County would be $1.35; within the Cities of Kenosha, Racine, and Waukesha, $1.00, increasing only with general price inflation. The plan also recognizes the need to provide local transit service in the smaller urban communities of the Region, particularly through shared-ride taxi service, including the continuation of the shared-ride taxi services provided in the Cities of Hartford, Port Washington, West Bend, and Whitewater.

Implementation Schedule: The implementation schedule for the transportation system plan identifies the elements of the transit plan which should be available for use as of the years 2001, 2007, 2010, and 2020. The transit plan element implementation schedule anticipates that the planned 69 percent increase in vehicle-miles of transit service over 1995 levels may largely not be expected to be initiated until 2002--after the second State biennial budget prepared following the completion of the year 2020 regional plan with approximately equal annual increments of just about 2.8 percent annually of the planned increase of 45,400

vehicle-miles of transit service.[2] Thus, compared to 1995 service levels, there would be a 21 percent increase in service by 2007, and a 30 percent increase by 2010, and a 69 percent increase by 2020. The plan proposes potential stages for the transit element summarized in Table 2. Transit system networks were prepared for each of these stages of system development of transit system service expansion and frequency of service improvement, which were utilized in the conformity determinations. The plan recommends that transit operators prepare short-range plans every three to five years detailing programmed service implementation which would serve to modify the specific elements of these staged service increases, but provide the planned vehicle-miles of service increment presented in Table 3.

Arterial Street and Highway System

The planned arterial street and highway system in the Region in the year 2010 is summarized in Table 4. In 1995, the arterial street and highway system in the Region consisted of about 3,277 route-miles of facilities. Under the regional plan, the arterial system would be increased by about 335 route-miles, by the year 2020, to a total of 3,612 route-miles. The additional arterial mileage reflects primarily the conversion of existing nonarterial facilities to arterial status and function as urban development proceeds within the Region. About 124 route-miles, or 3.4 percent of the proposed total arterial system mileage, would be added through new construction.

The recommended year 2020 arterial street and highway system for the Region identifies the number of traffic lanes to be provided on each segment of arterial street. Arterial facilities are identified as having either two, four, six, or eight lanes. The number of lanes identified refers to through travel lanes; that is, those lanes that would carry traffic directly through intersections. Thus, the number does not include any auxiliary traffic lanes provided at intersections for left- and right-turning movements, for vehicle parking, or for use by distressed vehicles. It was assumed in the regional systems analysis that such right- and left-turn lanes will be provided where the volumes of turning vehicles would adversely affect the movement of vehicles through the intersection. The provision of turn lanes would, therefore, follow a design investigation in connection with a given improvement project. In addition to determining whether or not right- and/or left-turn lanes should be provided at intersections, the design investigation should determine whether or not a given arterial street improvement should be made using a divided or an undivided roadway cross-section. Thus, the precise cross-section to be selected for a given improvement project should be determined by the State, county, and local implementing agencies following appropriate design study.

The plan recommended arterial street and highway system capacity improvement and expansion to add traffic lanes to the existing arterial street system are shown for each county on Maps 3 through 9 and are listed in Table 5. These arterial highway capacity improvement and expansion recommendations represent

---

[2] *Estimated 1997 transit service levels represent approximately a 3 percent increase compared to estimated 1995 levels with respect to vehicle-miles and hours of service.*

Table 2

POTENTIAL STAGES OF TRANSIT PLAN ELEMENT: 2001, 2007, 2010, AND 2020

Transit Service Element	Year			
	2001	2007	2010	2020
Rapid Transit[8]	Continue existing service within Milwaukee County and between Milwaukee and Waukesha Counties	Expand service to the City of Milwaukee central business district by adding new routes, including: • From STH 36 and CTH BB in the Village of Franklin via STH 36, IH 43, and IH 94 • From 13th Avenue and 54th Street in the City of Kenosha via STH 158 and IH 94 • From 5th Street and Main Street in the City of Racine via STH 20 and IH 94 • From STH 59 and S. West Avenue in the City of Waukesha via STH 59, Moreland Boulevard and IH 94 Extend existing rapid route operated between Capitol Drive and W. 124th Street and the City of Milwaukee central business district to Capitol Drive and Calhoun Road in the City of Brookfield Extend existing rapid route operated between the Village of Menomonee Falls and the City of Milwaukee central business district to STH 167 and Pilgrim Road in the Village of Germantown Restructure existing rapid and express routes between the Waukesha and Brookfield areas and the City of Milwaukee central business district to create two routes: • From Clinton Street and Broadway in the City of Waukesha via IH 94 • From Moorland Road and IH 94 in the City of Brookfield via IH 94 Restructure existing express route from Main Street and Wisconsin Avenue in the City of Oconomowoc to the City of Milwaukee central business district to provide rapid service via STH 16 and IH 94 Restructure existing rapid route between the Cities of Cudahy and South Milwaukee to the City of Milwaukee central business district to operate via E. Rawson Avenue, Pennsylvania Avenue, Lake Arterial, and IH 794	Reduce headways on rapid service to provide 10 to 20 minute service during peak periods on routes serving Milwaukee County, and 20 to 30 minute service during peak periods on all other routes. Operate all rapid services in both directions of travel	Reduce headways on rapid service to provide 5 to 20 minute service during peak periods on routes serving Milwaukee County Expand service to the City of Milwaukee central business district by adding new routes, including: • From N. Main Street and W. Washington Street in the City of West Bend via Main Street, Paradise Drive, USH 45, and IH 94 busway • From IH 94 and STH 100 in the City of Oak Creek via IH 94 • From the LakeView Corporate Park in the Village of Pleasant Prairie via STH 165 and IH 94 • From S. 43rd Street and Morgan Avenue in the City of Milwaukee via S. 43rd Street and IH 94 • From Green Bay Avenue and Congress Street (extended) in the City of Glendale via Green Bay Road and IH 43 • From IH 94 and STH 164 in the Town of Pewaukee via IH 94 Modify routes between the City of Milwaukee central business district and the Cities of Racine and Kenosha to include stop at IH 94 and CTH K in Racine County to serve industrial development along IH 94 Modify route between the City of Milwaukee central business district and the City of Oconomowoc via IH 94 to serve Pabst Farms development north of IH 94 and east of STH 67 in Waukesha County

Table 2 (continued)

Transit Service Element	Year			
	2001	2007	2010	2020
Rapid Transit – continued		Restructure existing rapid route between IH 43 and STH 32/84 in the Town of Port Washington to the City of Milwaukee central business district and central Milwaukee County to create three routes: • From S. 1st Avenue and Wisconsin Avenue in the Village of Grafton via STH 57, CTH C, and IH 43 • From Cedarburg Road and High Road in the City of Mequon via STH 57, STH 167, and IH 43 • From IH 43 and STH 32/84 in the Town of Port Washington via IH 43		
Express Transit[b]	Continue existing service within Milwaukee County, between Milwaukee and Waukesha Counties, and between Milwaukee, Racine, and Kenosha Counties	Expand Milwaukee urbanized area service by adding new routes, including: • From Clinton Street and Broadway Street in the City of Waukesha to the University of Wisconsin-Milwaukee via Moreland Boulevard, Blue Mound Road, Wisconsin Avenue, Prospect/Farwell Avenue, and Downer Avenue • From the transit station at N. Teutonia Avenue and Florist Avenue in the City of Glendale to the transit station at W. Loomis Road and IH 43 in the City of Greenfield via 27th Street • From the transit station at 13th Avenue and E. Rawson Avenue in the City of Oak Creek to the City of Milwaukee central business district via E. Rawson Avenue, Chicago/Packard Avenue, Kinnickinnic Avenue, and S. 1st Street Restructure existing service between the City of Milwaukee central business district and the Cities of Racine and Kenosha to eliminate service north of the City of Racine central business district, and to provide service between the Racine and Kenosha central business districts via STH 20, STH 31, and STH 158	Reduce headways on existing express routes in Milwaukee County, and expand service periods on selected routes in all areas to include weekday middays and evening periods	Expand Milwaukee urbanized area service by adding new routes, including: • From the Mayfair Shopping Center at W. North Avenue and N. Mayfair Road in the City of Wauwatosa to the University of Wisconsin-Milwaukee via North Avenue and Downer Avenue • From the Northridge Shopping Center at W. Brown Deer Road and N. 76th Street in the City of Milwaukee to the South-ridge Shopping Center at W. Edgerton Avenue and S. 76th Street in the Village of Greendale via 76th Street and the Milwaukee Regional Medical Center • From the transit station at S. 76th Street and IH 94 in the City of West Allis to the City of Milwaukee central business district via S. 76th Street, National Avenue, S. 2nd Street • From the Bayshore Shopping Center at E. Silver Spring Drive and N. Port Washington Road in the City of Glendale to the transit station at IH 94 and College Avenue in the City of Milwaukee via Port Washington Road, 6th and 7th Streets, S. Howell Avenue, and W. College Avenue • From the transit station at N. 124th Street and W. Capitol Drive in the City of Brookfield to the University of Wisconsin-Milwaukee via Capitol Drive and Downer Avenue

Table 2 (continued)

Transit Service Element	Year			
	2001	2007	2010	2020
Express Transit – continued				Extend service between the Cities of Racine and Kenosha to the Lakeview Corporate Park in the Village of Pleasant Prairie via Green Bay Road, 95th Street, CTH H, and STH 165
Local Transit[c]	Continue existing fixed-route service within Milwaukee and Waukesha Counties and within the Cities of Kenosha, Racine, and Waukesha Continue existing shared-ride taxi services in the Cities of Hartford, Port Washington, West Bend, and Whitewater	Extend fixed-route service to medium-density development and industrial areas in: • Northern and southern Milwaukee County • The west side of City of Racine • The west side of City of Kenosha • The northwest side of the City of Waukesha Make modest route realignments and reduce peak and off-peak headways on selected routes in Milwaukee County Add weekday and Saturday evening service until 10:00 p.m. in the Cities of Kenosha and Racine Continue existing shared-ride taxi services and expand to new areas as warranted	Continue extending fixed-route service to medium-density development and industrial areas in: • Northern and southern Milwaukee County • The City of New Berlin area in Waukesha County • The eastern portion of the Town of Caledonia and developing areas along IH 94 *in eastern* Racine County • The Village of Pleasant Prairie and developing areas along IH 94 in eastern Kenosha County Make modest route realignments and reduce peak and off-peak headways on selected routes in Milwaukee County Continue existing shared-ride taxi services and expand to new areas as warranted	Continue extending fixed-route service to medium-density development and industrial *areas in:* • Northern and southern Milwaukee County • The Villages of Butler, Menomonee Falls, and Sussex and City of Waukesha areas in Waukesha County • The area of IH 94 and CTH K in Racine County • The Pabst Farms development north of IH 94 and east of STH 67 in Waukesha County • The area of IH 94 and STH 83 in Waukesha County • The Germantown, Jackson, Slinger, and Hartford areas in Washington County Reduce headways on major routes in Milwaukee County outside express corridors to provide 10-minute peak and 20-minute midday off-peak service Reduce headways on major routes in the Cities of Racine and Kenosha to provide 15-minute peak service Continue existing shared-ride taxi services and expand to new areas as warranted

[a]All rapid transit routes would provide service on weekdays from 6:00 a.m. until 8:30 a.m. and from 3:30 p.m. until 6:00 p.m. Service would also be provided over selected routes during weekday midday periods. No service would be provided over rapid routes on weekday evenings or weekends. Operating headways on rapid routes would be reduced over the planning period and by 2020 range from five to 30 minutes during morning and afternoon peak period, and from 30 to 60 minutes during the midday period.

[b]New express transit services would initially be implemented as peak period services. By 2020 all express transit routes would provide service on weekdays from 6:00 a.m. until 6:00 p.m. Service would also be provided over selected routes during weekday evenings and on weekends. Operating headways on express routes would range from five to 15 minutes during morning and afternoon peak periods, from 10 to 30 minutes during the weekday midday period, and from 20 to 30 minutes during weekday evenings and on weekends.

[c]Headways on new local transit routes would be similar to existing local service headways. Operating Headways on existing local transit services would be reduced over the planning period. By 2020 local headways during the morning and afternoon peak periods would range from 10 to 30 minutes in Milwaukee County, 15 to 30 minutes in Kenosha and Racine, and 30 minutes in Waukesha. During off-peak periods local headways would range from 20 to 60 minutes in Milwaukee County, 30 to 60 minutes in Kenosha and Racine, and 60 minutes in Waukesha.

Table 3

NUMBER AND PERCENT CHANGE IN REVENUE VEHICLE-MILES OF TRANSIT SERVICE IN THE REGION BY SERVICE TYPE AND IMPLEMENTATION SCHEDULE: 2001, 2007, 2010, AND 2020

Transit Service Type	Existing Transit Vehicle-Miles of Revenue Service: 1995[a] (Average Weekday)	Proposed Transit Vehicle-Miles of Revenue Service (Average Weekday)							
		2001		2007		2010		2020	
		Number	Percent of Total	Number	Percent of Total	Number	Percent of Total	Number	Percent of Total
Rapid.....	3,800	3,800	5.8	7,900	10.1	9,700	11.5	14,700	13.2
Express	5,500	5,500	8.3	9,200	11.8	10,300	12.2	21,500	19.3
Local.....	56,800	56,800	85.9	60,900	78.1	64,700	76.3	75,300	67.5
Total	66,100	66,100	100.0	78,000	100.0	84,700	100.0	111,500	100.0

[a] *Since 1995, transit vehicle-miles of service in Southeastern Wisconsin have increased by nearly 18 percent to 77,900 vehicle-miles of service in 1999, with the bulk of the expansion occurring since 1997. Service expansion has included the initiation of new service between Milwaukee County and Ozaukee and Washington Counties, new evening service in the Waukesha and Racine areas, and additional service in Milwaukee and Waukesha Counties including in the IH 94 East-West travel corridor. Thus, the transit service element of the plan may be considered to be ahead of the plan implementation schedule.*

2007			104th Avenue	STH 50 to STH 158	Widen from two to four traffic lanes
2007		Expansion	IH 94/USH 41	CTH ML	Construct new interchange
2007			CTH ML *extension*	CTH H to STH 31	Construct two lanes on new alignment
2007			52nd Avenue extension	93rd Street to STH 165	Construct two lanes on new *alignment*
2007			85th Street extension	Sheridan Road to 7th Avenue	Construct two lanes on new alignment
2007[a]	Milwaukee	Widening	STH 32	County Line Road to STH 100	Widen from two to four traffic lanes
2007[a]			STH 100	STH 38 to STH 32	Widen from two to four traffic lanes
2007[a]			STH 100	STH 36 to 81st Street	Widen from two to four traffic lanes
2007[a]			STH 100	81st Street to 60th Street	Widen from two to four traffic lanes
2007[a]			STH 100	60th Street to USH 41	Widen from two to four traffic lanes
2007[a]			CTH U	Rawson Avenue to Puetz Road	Widen from two to four traffic lanes
2007[a]			CTH ZZ	STH 38 to Pennsylvania Avenue	Widen from two to four traffic lanes
2007			Port Washington Road	Bender Road to W. Daphne Road	Widen from two to four traffic lanes
2007[a]			Whitnall Avenue	Nicholson Avenue to Packard Avenue	Widen from two to four traffic lanes
2007			91st Street	STH 100 to Ozaukee County Line	Widen from two to four traffic lanes
2007			107th Street	Good Hope Road to STH 145	Widen from two to four traffic lanes
2007[a]			124th Street	STH 190 to Hampton Avenue	Widen from two to four traffic lanes
2007		Expansion	Canal Street extension	USH 41 to 21st Street	Construct two lanes on new alignment
2007			Canal Street extension	6th Street to 2nd Street	Construct two lanes on new alignment
2007	Ozaukee	Widening	STH 33	Progress Drive to Foster Street	Widen from two to four traffic lanes
2007[a]			STH 33	IH 43 to *Spring Street*	Widen from two to four traffic lanes
2007[a]			STH 57	IH 43 to Sheboygan County line	Widen from two to four traffic lanes
2007[a]			STH 60	Wisconsin Avenue to IH 43	Widen from two to four traffic lanes
2007[a]			CTH W	STH 167 to Highland Road	Widen from two to four traffic lanes
2007			Columbia Road	Bridge Street to Chateau Drive	Widen from two to four traffic lanes
2007			Pioneer Road (CTH C)	STH 181 to Green Bay Road	Widen from two to four traffic lanes
2007			Pioneer Road (CTH C)	Green Bay Road to IH 43	Widen from two to four traffic lanes
2007[a]			Wauwatosa Road (STH 181)	STH 167 to CTH C	Widen from two to four traffic lanes
2007[a]	Racine	Widening	STH 11	IH 94 to CTH H	Widen from two to four traffic lanes
2007[a]			STH 11	86th Street in the Village of Sturtevant to Willow Road	Widen from two to four traffic lanes
2007[a]			STH 11	Willow Road to STH 31	Widen from four to six traffic lanes
2007			STH 20	Oakes Road to Sunnyslope Road	Widen from four to six traffic lanes
2007[a]			STH 32	Milwaukee County to Five Mile Road	Widen from two to four traffic lanes

Table 5 (continued)

Year Open to Traffic	County	Improvement Type	Facility	Termini	Description
2007[a]	Racine (continued)	Widening (continued)	CTH K	Union Pacific Railway to STH 38	Widen from two to four traffic lanes
2007			Calumet Street	Robert Street to Bridge Street	Widen from two to four traffic lanes
2007			Three Mile Road	STH 32 to CTH G	Widen from two to four traffic lanes
2007[a]		Expansion	Burlington bypass	(STH 36) Milwaukee Avenue to Walworth County line	Construct four lanes on new alignment
2007			Calumet Street extension	Market Street to Robert Street	Construct four lanes on new alignment
2007			Commerce Street/Pine Street	Herman Street to Origen Street	Construct two lanes on new alignment
2007			Memorial Drive extension	Chicory Road to CTH KR	Construct two lanes on new alignment
2007			Oakes Road extension	STH 20 to Airline Road	Construct two lanes on new alignment
2007			Oakes Road extension	Braun Road to STH 11	Construct two lanes on new alignment
2007[a]			State Street/Adams Street Connection	Calumet Street to STH 11	Construct two lanes on new alignment
2007[a]	Walworth	Widening	USH 14	Proposed STH 67 bypass to McHenry County line	Widen from two to four traffic lanes
2007[a]			STH 50	STH 67 to Geneva Street	Widen from two to four traffic lanes
2007[a]			STH 50	CTH H to Edwards Boulevard	Widen from two to four traffic lanes
2007[a,b]		Expansion	USH 12 freeway	Cold Spring Road to Howard Road[c]	Construct four lanes on new alignment
2007[a]			Burlington bypass	STH 11 Racine-Walworth County Line	Construct four lanes on new alignment
2007[a]			STH 120 bypass	Townline Road to existing STH 120 at Willow Road	Construct two lanes on existing and new alignment
2007[a]	Washington	Widening	USH 45	CTH D to Prospect Drive	Widen from two to four traffic lanes
2007[a]			STH 60	USH 41 to CTH P	Widen from two to four traffic lanes
2007[a]			CTH Q	Division Road to Pilgrim Road	Widen from two to four traffic lanes
2007[a]			CTH Y	CTH Q to USH 41/45	Widen from two to four traffic lanes
2007			Decorah Road	7th Avenue to Indiana Avenue	Widen from two to four traffic lanes
2007[a]			STH 164	STH 175 to STH 60	Widen from two to four traffic lanes
2007			Main Street	Decorah Street to Walnut Street	Widen from two to four traffic lanes
2007			Paradise Drive	A point 1,250 feet east of USH 45 to Main Street	Widen from two to four traffic lanes
2007			STH 33	East Branch of the Rock River to USH 41	Widen from two to four traffic lanes
2007[a]		Expansion	STH 33	Trenton Road to Oak Road	Construct four lanes on new alignment
2007[a]			STH 83	CTH E to Monroe Avenue	Construct two lanes on new alignment
2007			STH 83	Monroe Avenue to Lincoln Avenue	Construct two lanes on new alignment
2007			Arthur Road extension	CTH N to Arthur Road	Construct two lanes on new alignment
2007			Monroe Avenue extension	Monroe Avenue to Pond Road	Construct two lanes on new alignment
2007			N. River Road extension	N. River Road to STH 144	Construct two lanes on new alignment
2007			18th Avenue extension	Jefferson Street to CTH D	Construct two lanes on new alignment
2007[a]	Waukesha	Widening	STH 59	STH 164 to Poplar Creek	Widen from two to four traffic lanes
2007[a]			STH 59	Johnson Road to Calhoun Road	Widen from two to four traffic lanes
2007			STH 83	IH 94 to USH 18	Widen from two to four traffic lanes
2007[a]			STH 83	Mariner Drive to STH 16	Widen from two to four traffic lanes
2007[a]			STH 83	IH 43 to CTH NN	Widen from two to four traffic lanes
2007			STH 164	City of Waukesha north corporate limit to IH 94	Widen from four to six traffic lanes
2007[a]			STH 164	STH 190 to Washington County line	Widen from two to four traffic lanes
2007			STH 190	CTH Y to Brookfield Road	Widen from four to six traffic lanes
2007			CTH D	Moorland Road to Milwaukee County line	Widen from two to four traffic lanes
2007[a]			CTH L	CTH Y to CTH HH	Widen from two to four traffic lanes
2007[a]			CTH J	Rockwood Drive to STH 190	Widen from two to four traffic lanes
2007			CTH Q	CTH V to STH 175	Widen from two to four traffic lanes
2007			CTH X	CTH H to STH 59	Widen from two to four traffic lanes
2007			CTH X	STH 59 to Moreland Boulevard	Widen from two to four traffic lanes
2007			CTH Y	Hillendale Drive to CTH HH	Widen from two to four traffic lanes
2007[a]			CTH Y	USH 18 to North Avenue	Widen from two to four traffic lanes
2007			CTH TT	MacArthur Road to USH 18	Widen from two to four traffic lanes
2007[a]			CTH VV	CTH Y to Bette Drive	Widen from two to four traffic lanes
2007			CTH YY	Lisbon Road to CTH VV	Widen from two to four traffic lanes
2007[a]			Calhoun Road	IH 94 to USH 18	Widen from two to four traffic lanes
2007[a]			Calhoun Road	USH 18 to Gebhardt Road	Widen from two to four traffic lanes
2007[a]			Calhoun Road	CTH D to STH 59	Widen from two to four traffic lanes
2007			North Avenue	Barker Road to 147th Street	Widen from two to four traffic lanes
2007			Pilgrim Road	USH 41/USH 45 to Washington County Line	Widen from two to four traffic lanes
2007[a]			Sunset Drive	Tenny Avenue to STH 59/STH 164	Widen from two to four traffic lanes
2007		Expansion	IH 94	CTH P	Construct new interchange
2007[a]			STH 16/STH 67 bypass	Wisconsin Avenue to Jefferson County line	Construct four lanes on new alignment
2007			Lake Drive extension	Lapham Street to STH 67	Construct two lanes on new alignment
2007			Mukwonago bypass	IH 43 to CTH ES	Construct two lanes on new alignment
2007			Valley Road	STH 67 to CTH P	Construct two lanes on new alignment
2010	Kenosha	Widening	STH 32	128th Street to CTH T	Widen from two to four traffic lanes
2010			STH 83	128th Street to STH 50	Widen from two to four traffic lanes
2010			STH 158	104th Avenue to STH 31	Widen from two to four traffic lanes
2010			STH 165	STH 31 to STH 32	Widen from two to four traffic lanes
2010			CTH E	STH 31 to STH 32	Widen from two to four traffic lanes

Table 5 (continued)

Year Open to Traffic	County	Improvement Type	Facility	Termini	Description
2010	Kenosha (continued)	Widening (continued)	CTH S	IH 94 to STH 31	Widen from two to four traffic lanes
2010		Expansion	CTH F extension	CTH O to 89th Street	Construct two lanes on new alignment
2010			39th Avenue extension	24th Street to 18th Street	Construct two lanes on new alignment
2010	Milwaukee	Widening	STH 38	County Line Road to Oakwood Road	Widen from two to four traffic lanes
2010			Morgan Avenue	Forest Home Avenue to 43rd Street	Widen from two to four traffic lanes
2010			Pennsylvania Avenue	Drexel Avenue to College Avenue	Widen from two to four traffic lanes
2010			124th Street	North Avenue to Watertown Plank Road	Widen from two to four traffic lanes

2020		Expansion	CTH K extension	Britton Road to 108th Street	Construct two lanes on new alignment
2020	Walworth	Widening	STH 50	Pearson Drive to Madison Street	Widen from two to four traffic lanes
2020			STH 120	STH 36 to USH 12	Widen from two to four traffic lanes
2020		Expansion	IH 43	CTH O	Construct new interchange
2020			USH 12 freeway[d]	Howard Road to Elkhorn	Construct four lanes on new alignment
2020			USH 12 freeway	CTH H to McHenry County line	Construct four lanes on new alignment
2020			STH 67 bypass (Walworth, Fontana, and Williams Bay)	Existing STH 67 at Village of Walworth south corporate limits to existing STH 67 at STH 50	Construct four lanes generally on new alignment
2020			CTH P realignment	Territorial Road to CTH A	Construct two lanes on new alignment
2020			Willow Road extension	West Side Road to CTH H	Construct two lanes on new alignment
2020			New facility	STH 67 west to STH 11	Construct two lanes on new alignment
2020			New facility	STH 11 north to CTH H	Construct two lanes on new alignment
2020[a]	Washington	Widening	STH 164	CTH Q to STH 175	Widen from two to four traffic lanes
2020		Expansion	Kettleview Road extension	CTH H to STH 28	Construct two lanes on new alignment
2020			Kettleview Road extension	STH 33 to Schuster Drive	Construct two lanes on new alignment
2020			Schuster Drive extension	Schuster Drive to Beaver Dam Rd	Construct two lanes on new alignment
2020			Wacker Drive extension	STH 60 to Lee Road	Construct two lanes on new alignment
2020	Waukesha	Widening	USH 18	STH 83 to CTH TT	Widen from two to four traffic lanes
2020			STH 67	IH 94 to USH 18	Widen from two to four traffic lanes
2020			CTH Y	STH 74 to CTH Q	Widen from two to four traffic lanes
2020			CTH Y	CTH K to STH 74	Widen from two to four traffic lanes
2020			CTH Y	North Avenue to STH 190	Widen from two to four traffic lanes
2020			Calhoun Road	CTH ES to CTH D	Widen from two to four traffic lanes
2020			Calhoun Road	North Avenue to STH 190	Widen from two to four traffic lanes
2020			Johnson Road	Coffee Road to Lincoln Avenue	Widen from two to four traffic lanes
2020			Johnson Road	A point about 2,000 feet south of STH 59 to STH 59	Widen from two to four traffic lanes
2020		Expansion	STH 83	STH 16 to Thompson Lane	Construct two lanes on new alignment
2020			STH 83	Kilbourne Road to CTH CW	Construct two lanes on new alignment
2020			CTH Y extension	STH 190 to CTH K	Construct four lanes on new alignment
2020			Johnson Road extension	A point about 2,000 feet south of STH 59 to Lincoln Avenue	Construct four lanes on new alignment
2020			Johnson Road extension	Coffee Road to CTH Y	Construct four lanes on new alignment
2020			Oconomowoc Parkway	STH 16 to CTH Z	Construct two lanes on new alignment
2020			Sunnyslope Road extension	CTH HH to CTH L	Construct two lanes on new alignment
2020			Waukesha west bypass	CTH X to Macarthur Road	Construct four lanes on new alignment
2020			124th Street extension	Watertown Plank Road to STH 59	Construct two lanes on new alignment

[a] *Transportation improvement project is included in the 2000-2002 Transportation Improvement Program.*

[b] *Transportation improvement project is included in the baseline transportation system".*

[c] *The initial segment of the USH 12 freeway between the City of Whitewater and the City of Elkhorn is anticipated to be the segment bypassing the City of Whitewater from existing USH 12 at approximately Howard Road southeast of the City to existing USH 12 at approximately Cold Spring Road northwest of the City. Initially, only two travel lanes are anticipated to be constructed and are anticipated to be open to traffic by the year 2007.*

[d] *Initial two lanes of four lane freeway proposed to be constructed and open to traffic by the year 2020.*

Source: SEWRPC.

all highway plan element projects with potential air quality impact and which are referred to in the Federal regulations as "nonexempt" projects. Table 5 also presents the anticipated implementation stages for all highway capacity improvement and expansion recommended under the plan; more specifically, the planned capacity improvement and expansion to be open to traffic by the years 2001, 2007, 2010, and 2020 are identified. Table 6 summarizes the mileage of system improvement and expansion anticipated to be implemented by 2001, 2007, 2010, and 2020. Given the potential for individual projects to be deferred or advanced due to considerations such as right-of-way acquisition, the anticipated implementation schedule for the plan is considered to be the mileage of county and local arterial system improvement and expansion, and the mileage of state trunk highway improvement and expansion as set forth in Table 6.

System Expansion: Constructing New Facilities: System expansion consists of all projects which would significantly increase the capacity of the existing system through construction of new facilities. The plan would provide for the construction of 125 route-miles of new arterial facilities. These include such long-planned facilities as the STH 16 freeway bypass of Oconomowoc, the completion of the Waukesha bypass, and the STH 36 bypass of Burlington. In all, proposed new arterial street and highway facilities would represent about 3.5 percent of the total planned arterial route-miles in the year 2020.

System Improvement: Widening Existing Facilities: System improvement consists of all projects which would significantly increase the capacity of the existing system through street widening to provide additional through traffic lanes. Under the final plan, a total of 405 route-miles of facilities would be widened and improved with respect to traffic carrying capacity. Proposed improvements would include the widening of CTH J in Washington and Waukesha Counties; of Cleveland Avenue (CTH D) and Racine Avenue (CTH Y) in Waukesha County; of STH 31 and CTH Y in Kenosha and Racine Counties; of Northwestern Avenue (CTH K) and Spring Street (CTH-C) in Racine County; of STH 57 and Port Washington Road (CTH W) in Ozaukee County; of STH 33 in Ozaukee and Washington Counties; of Rawson Avenue (CTH BB) and Ryan Road (STH 100) in Milwaukee County; and the completion of the widening of STH 50 in Kenosha and Walworth Counties. The system improvement activities would comprise about 11.2 percent of the total planned arterial system.

System Preservation: Maintaining Existing Facilities: System preservation consists of all arterial preservation projects required to maintain the structural adequacy and serviceability of the existing arterial system without significantly increasing the capacity of that system. This would include all projects classified as resurfacing and reconstruction for the same capacity. The plan proposes system preservation activities for about 3,082 route-miles of the arterial system representing about 85.3 percent of the total planned arterial system in the year 2020.

Included in the category of preservation are extensive improvements needed to renew the freeway system in the Milwaukee area. That freeway system, and particularly the IH 94 East-West Freeway which is the

Table 6

IMPLEMENTATION SCHEDULE FOR ARTERIAL STREET SYSTEM PLAN ELEMENT
CAPACITY IMPROVEMENT AND EXPANSION: 2001, 2007, 2010, AND 2020

Southeastern Wisconsin Region	Proposed Incremental Arterial System Improvement and Expansion Route Miles				
	2001[a]	2007	2010	2020	Total
State Trunk Highway	41	111	108	69	329
County and Local Trunk Highway	15	69	66	51	201
Total Regional Arterial System	56	180	174	120	530

[a] *Since the completion of the plan in 1997, approximately 40 miles of the proposed arterial improvement and expansion have been implemented.*

Source: SEWRPC

"backbone" of the entire regional arterial street and highway system, is nearing the end of its physical and economic life. The pavement and bridge structures and surfaces are worn out. In part because the entire regional freeway system was never completed as once planned, the existing components of the Milwaukee-area freeway system already carry far more traffic than they were designed for, and can be expected to carry even heavier traffic loads in future years. Moreover, the geometric design of this freeway system and, in particular, the configuration of the major interchanges, is obsolete and, given the extremely heavy traffic loading, increasingly dangerous.

Importantly, the plan recommends the reconstruction and modernization of the Milwaukee area freeway system--particularly the East-West Freeway IH 94, including the Zoo, Stadium, and Marquette interchanges--and the reconstruction of freeway interchanges as needed in Waukesha, Racine, and Kenosha Counties to urban design standards. Consideration in reconstruction should be given to elimination of lane drops at interchanges, provision of adequate merging and diverging lane lengths, provision of auxiliary lanes, provision of adequate shoulders and lateral clearance, improvements in horizontal and vertical curvature, and conversion of left-hand off-ramps and on-ramps to the right hand side of the freeway.

Highway improvements are recommended in the regional transportation plan only as a last resort, that is, to address the congestion which may not be expected to be alleviated by land use, systems management, or public transit measures. The first elements considered for inclusion in the regional transportation plan were the transit and transportation system management elements. The potential of these elements to eliminate congestion was explicitly identified. Highway improvements were then recommended to be added to the regional transportation plan to resolve to the extent practicable the residual existing and probable future traffic congestion.

Transportation Systems Management Element

The transportation systems management element of the plan is intended to encourage more efficient use of the existing transportation system. It includes travel demand management measures to encourage carpooling and transit travel and thereby reduce vehicular travel. It also includes traffic management measures which seek to obtain the maximum vehicular capacity practicable from existing arterial street and highway facilities. The transportation systems management element of the plan includes the following seven measures:

1. Freeway Traffic Management

   Implementation of an areawide freeway traffic management system, including an operational control strategy that would, through restricted access of single-occupancy vehicles at ramp meters, attempt to minimize freeway traffic flow breakdown and stop-and-go traffic and provide for minimum average operating speeds of about 30 to 35 miles per hour on all freeway segments during peak traffic periods. Buses and high-occupancy vehicles would receive preferential access at the

ramps. The system would also include elements to provide advisory information and to better manage traffic incidents.

2. Arterial Curb-Lane Parking Restrictions

   Restriction of curb-lane parking as needed during peak periods along about 400 miles, or about 12 percent, of the planned 3,612-mile arterial street and highway system in order to reduce traffic congestion and help provide good transit service. Local governmental units would consider the proposed curb-lane parking restrictions as traffic volumes and congestion increase, and implement these restrictions rather than considering expansion of highway capacity through widening and new construction beyond that envisioned in the plan.

3. Traffic Engineering

   The use of state-of-the-art traffic engineering practices to assist in achieving efficient traffic flow on arterial facilities, including intersection treatments with turn lanes as needed, and efficient traffic signalization, and the facilitation of pedestrian and bicycle movements on arterial streets and highways.

4. Traffic Management Technology

   The application of advanced traffic management technology, known as Intelligent Transportation Systems (ITS), as such technology becomes practicable and available over the plan implementation period. This may include traveler information for transit and highway travel, and advanced traffic management systems for improved transportation facility operation.

5. Travel Demand Management Promotion

   A regionwide program to promote travel through ridesharing, transit use, bicycle use, and pedestrian movement, together with telecommuting and work-time rescheduling as may be found feasible.

6. Detailed Land Use Planning and Site Design

   The preparation and implementation by local governmental units of detailed, site-specific neighborhood land use plans to facilitate travel by transit, bicycle, and pedestrian movement, as recommended in the adopted regional land use plan.

7. Transit Systems Management and Service Enhancement Measures

   The undertaking by the transit agencies in the Region of a range of activities to enhance the quality of transit services and to facilitate transit use, including conduct of marketing and public information and education activities, improvement of bus speeds through priority systems and signal preemption, and promotion of innovative fare-payment systems.

2000 THROUGH 2002 TRANSPORTATION IMPROVEMENT PROGRAM (TIP) FOR SOUTHEASTERN WISCONSIN

The proposed 2000 through 2002 transportation improvement program for Southeastern Wisconsin is documented in the SEWRPC report entitled, *A Transportation Improvement Program for Southeastern Wisconsin: 1998-2000.* The 2000 through 2002 transportation improvement program includes all Federally and otherwise funded arterial highway and public transit projects programmed within the seven-county Southeastern Wisconsin Region for the years 2000 through 2002. A listing of all projects in the transportation improvement program is referenced in Appendix B of this report. The transportation improvement program thus includes projects for the entire seven-county Region both inside and outside the three urbanized areas within the Region of Milwaukee, Racine, and Kenosha. The transportation improvement program also includes both arterial highway and public transit projects which receive Federal assistance and projects which are funded solely with State and/or local funds. The Commission's annual transportation improvement program has historically included both Federally funded and otherwise funded projects and has included projects for the entire Southeastern Wisconsin Region as well, not just the three urbanized areas within that Region. The annual transportation improvement program has included more than the Federally required listing of Federally assisted projects in the three urbanized areas in order to provide complete information on proposed arterial highway and public transit improvements. The continuation of the preparation of such a comprehensive transportation improvement program for Southeastern Wisconsin permits a comprehensive evaluation of transportation improvements with respect to air quality impacts.

Transportation Improvement Program Projects

The 2000 through 2002 transportation improvement program includes 866 projects. The transportation improvement program for the seven-county Southeastern Wisconsin Region for the years 2000, 2001, and 2002 represents a total programmed investment in transportation improvements of about $1.53 billion. Of this total, about $881 million, or about 57 percent, is proposed to be provided in Federal aids; $408 million, or about 27 percent, in State aids; and $244 million, or about 16 percent, in local funds. The first year of the transportation improvement program for the seven-county Southeastern Wisconsin Region represents a total programmed investment in transportation improvements of about $679 million. Of this total, about $415 million, or about 61 percent, is proposed to be provided in Federal aids; $170 million, or about 25 percent, in State aids; and $94 million, or about 14 percent, in local funds.

Historically, the transportation improvement program for Southeastern Wisconsin has been structured to indicate the programmed projects in nine categories: highway system preservation, highway system improvement, highway system expansion, transit system preservation, transit system improvement, transit

system expansion, highway safety, highway environmental enhancement, and off-system highway.[3] These nine categories are defined as follows:

1. Highway Preservation
   Projects which result in little or no increase in the traffic-carrying capacity of the existing arterial system, but which are necessary to maintain existing capacity and structural adequacy of the arterial facility for which the projects is proposed.

2. Highway Improvement
   Projects which increase the capacity of existing arterial highways through addition of traffic lanes.

3. Highway Expansion
   Projects which increase the capacity of the arterial highway system through development of new arterial streets of highways.

4. Transit Preservation
   Projects which are necessary to maintain the current quality and level of service on the existing transit system.

5. Transit Improvement
   Projects which improve the quality and level of service on the existing transit system.

6. Transit Expansion
   Projects which either expand the existing transit system or create new transit systems or subsystems.

7. Highway Safety
   Projects designed to improve or eliminate existing unsafe conditions on the Federal aid highway system as it currently exists, and are candidates for special Federal safety program funding.

8. Environmental Enhancement
   Projects which, while materially reducing air, noise, or visual pollution, do not significantly affect highway system operation or capacity.

---

[3] *All transportation improvement program projects with potential impact on air quality, that is, "nonexempt" projects, are listed later in this report in Table 12.*

9. Highway Off-System
   Projects on streets or highways which are not on the arterial street system, or a currently designated Federal aid system, and may be candidates for special Federal safety-off-system funding.

Figure 1 graphically presents the proposed expenditures in the first year of the TIP by each of the nine project categories for Walworth County and for Kenosha, Milwaukee, Ozaukee, Racine, Washington, and Waukesha Counties combined. Certain expenditure patterns are apparent from an examination of Figure 1. These include the following:

1. A significant portion of financial resources, about 64 percent, are to be devoted to the preservation of existing transportation facilities and services in the Region.

2. The expenditure of funds for highway expansion is about $18.1 million, or less than 3 percent of total programmed expenditures in the Region. The expenditures for highway improvement are approximately $103.9 million, or 15 percent of total expenditures. This compares to the $333.7 million programmed for expenditures on highway preservation.

3. A significant portion of total financial resources is devoted to public transit projects, which account for about 24 percent of the programmed resources. Of the total programmed resources for public transit, 61 percent is for preservation, only 30 percent and 9 percent, respectively, for service improvement and expansion.

The transportation improvement program has been developed to be fiscally constrained, pursuant to U. S. Department of Transportation metropolitan planning regulations (23CFR Part 450). The funding attendant to implementing the transportation improvement program has been determined to be consistent with existing available Federal, State, and local funding levels.

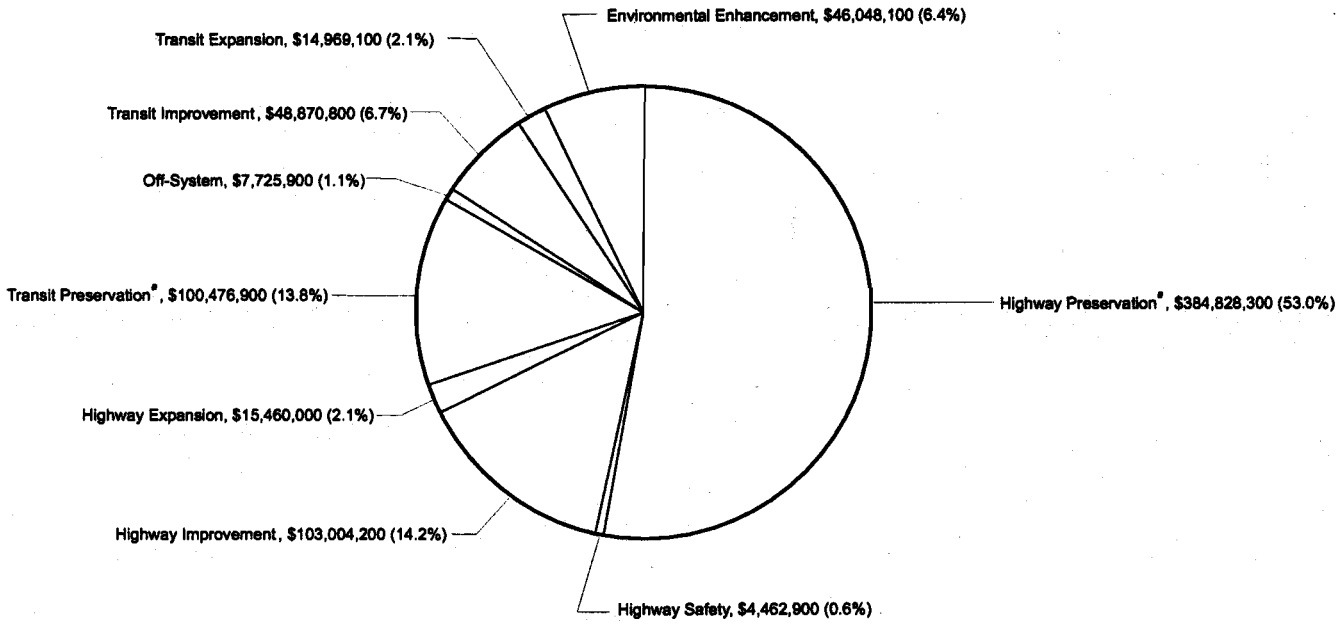
ASSESSMENT OF CONFORMITY OF THE YEAR 2020 REGIONAL TRANSPORTATION PLAN AND THE 2000 THROUGH 2002 TRANSPORTATION IMPROVEMENT PROGRAM

This section of the report demonstrates the conformity of the year 2020 regional transportation system plan and the year 2000 through 2002 transportation improvement program for Southeastern Wisconsin with respect to each of the conformity criteria, as well as with respect to the procedures to be used to demonstrate conformity as established by the U. S. Environmental Protection Agency for such conformity assessment. This conformity demonstration is for the six county ozone severe nonattainment area, including Kenosha, Milwaukee, Ozaukee, Racine, Washington, and Waukesha Counties.

Figure 1

DISTRIBUTION OF EXPENDITURES IN 2000 OF THE 2000-2002 TRANSPORTATION IMPROVEMENT PROGRAM BY PROJECT CATEGORY

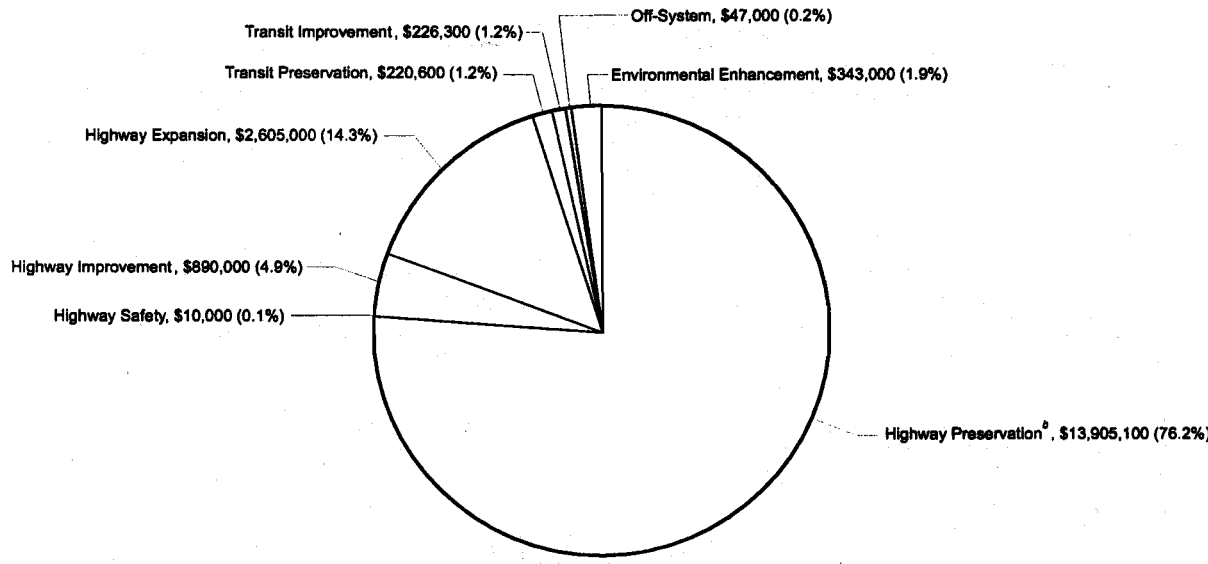
KENOSHA, MILWAUKEE, OZAUKEE, RACINE, WASHINGTON, AND WAUKESHA COUNTIES



TOTAL $725,846,200

([a] INCLUDES ESTIMATED $60 MILLION FOR ARTERIAL HIGHWAY OPERATIONS AND MAINTENANCE)

WALWORTH COUNTY



TOTAL $18,283,000

([b] INCLUDES ESTIMATED $5 MILLION FOR ARTERIAL HIGHWAY OPERATIONS AND MAINTENANCE)

Source: SEWRPC

Conformity Determination Procedural Requirements

The procedures to determine conformity set forth in the August 15, 1997, *Federal Register* (40CFR Parts 51 and 93), are: 1) use of latest planning assumptions, 2) use of latest emission model, 3) interagency and public consultation, 4) provision for timely implementation of transportation control measures, 5) transportation plan content , and 6) procedures for determining regional transportation plan related emissions.

Use of Latest Planning Assumptions

This conformity determination procedural requirement (40 CFR, Part 93.110) specifies that the conformity assessment must be based upon the official and most current planning assumptions, including current and future population levels, employment levels, travel demand, traffic volumes, and transit ridership.

The Southeastern Wisconsin Regional Planning Commission is the gubernatorially designated MPO for the Kenosha, Milwaukee, and Racine urbanized areas within Southeastern Wisconsin and also the statutory official areawide planning agency for the seven-county Southeastern Wisconsin Region, which contains these three urbanized areas. The Commission is the agency within Southeastern Wisconsin responsible under State law for the preparation of current population, household, employment, travel, and traffic estimates and also for the preparation of future household, employment, travel, and traffic forecasts. The Commission also maintains the travel and traffic simulation models which are used within Southeastern Wisconsin for transportation and air quality planning. The estimates, forecasts, and models used in this conformity analysis are the same as used by the Commission in its regional planning efforts, and as well in the preparation of the new State Implementation Plan for Air Quality in response to the 1990 Clean Air Act Amendments.

The determination of conformity of the transportation system plan and transportation improvement program requires specific travel and emission forecasts for the years 2001, 2007, 2010, and 2020. The population, household, and employment data at regional and subregional levels for the years 2001, 2007, and 2010 have been projected by interpolation between the existing 1990 regional and subregional estimates and the year 2020 regional forecasts and subregional planned forecast allocations based upon the year 2020 regional land use plan. The regional level 1990 estimates and 2020 forecasts for population, households, and employment are set forth in Table 7, along with the interpolated 2001, 2007, and 2010 population, household, and employment levels.

The new year 2020 regional transportation plan is an extension 10 years in time of the year 2010 regional transportation plan, and is substantially based on that 2010 plan. As part of the year 2010 regional transportation plan preparation, the implications of a range of different future development scenarios for Southeastern Wisconsin were explored, including such scenarios with respect to vehicle-miles of travel. The different scenarios included intermediate- and high-growth scenarios for the Region as a whole,

Source: SEWRPC

centralized and decentralized land use patterns, and alternative regional transportation systems ranging from a "no-build" option, to an alternative which would substantially increase the price of automobile transportation, to the recommended system plan. The results of analyses of these scenarios indicated that the future annual growth in vehicle-miles of travel within the Region may be expected to range from about 1.0 percent to 2.0 percent. The analyses indicated that alternative land use patterns and transit and highway improvements may be expected to have little impact on vehicle-miles of travel, accounting for less than 0.1 percent variation in annual growth. Variations in regional economic growth and substantial changes in the perceived cost of automobile use may be expected to account each for about 0.5 percent variation in growth annually.

The determination of conformity utilizes the travel simulation models which have been maintained, refined, and validated by the Commission since the 1960s, and utilized in the preparation of the regional transportation system plan and for the motor vehicle emissions forecasts for the State Implementation Plan. These models and their validation are described in Chapter VII, "Travel Simulation Models," of SEWRPC Planning Report No. 41, *A Regional Transportation System Plan for Southeastern Wisconsin: 2010.* The Commission travel models were revalidated and recalibrated, using new data provided by a major origin and destination travel survey completed within the Region in 1991. The models were validated for the years 1990 and 1991 by applying the models with Census data and 1991 transportation network data and comparing model estimates of trip generation, trip distribution, highway traffic, and transit ridership to estimates derived from travel surveys and actual traffic and transit ridership counts. The validation indicated that the models were able to accurately replicate not only observed trip generation, travel pattern, modal choice, and vehicle-miles of travel data, but also model-estimated individual arterial street traffic volume and transit route ridership within 5 to 10 percent of the actual average weekday vehicular traffic and transit ridership counts.

Under this procedural requirement, changes in the transit system with respect to service levels and fares since the last plan and improvement program conformity determination are to be described, along with changes proposed in the plan and improvement program with respect to such service levels and fares. Transit service levels have changed significantly since the last conformity determination completed in 1997 with respect to the year 2020 plan and the year 1998-2000 transportation improvement program, as well as with respect to previous conformity determinations completed in 1996 for the 1997-1999 transportation improvement program and completed in 1994 on the year 2010 transportation plan and the 1995-1997 improvement program. Transit service levels are estimated to have increased by about 1 percent between 1994 and 1996 as measured by vehicle-miles of bus service, and to have increased by about 4 percent between 1996 and 1997, and by about 13 percent between 1997 and 1999. Since 1995, the base year of the regional transportation plan, transit service levels have increased by nearly 20 percent, transit ridership has increased by about 10 percent, and transit annual operating subsidies have increased by about 25 percent. Transit fares have increased at less than the level of general price inflation estimated to have experienced an

increase of 9 percent since 1994. With respect to the Milwaukee County Transit System, which represents over 95 percent of the transit service provided in Southeastern Wisconsin, the transit base fare increased by about 8 percent from $1.25 in 1994 to $1.35 in 1996 and has remained at $1.35 through 1999. The average fare per revenue passenger which accounts for changes in the adult base fare and the price of passes and tickets increased from $0.79 in 1994 to $0.83 in 1996, a 5 percent increase, and in 1999 is estimated to have declined to $0.81 per revenue passenger. As noted in the description of the transportation system plan, the conformity determination of the plan assumes, based upon the transit system element of the regional plan, that transit service will be increased from 1995 levels beginning in 2002 by approximately 69 percent over the time period from 1995 to 2020, or by about 2.8 percent annually beginning in 2002, and transit fare increases on average over the 23-year period will be held to increases consistent with general price inflation.

The State Implementation Plan assumed within the six county severe nonattainment area emissions consistent with a 2.0 percent annual increase in vehicle-miles of travel to the year 1999, and 1.4 percent annually beyond the year 1999.[4] The Walworth County maintenance plan for air quality assumes a 2.7 percent annual increase in vehicle-miles of travel to 1999, and 2.2 percent annual increase from 1999 to 2007. The official intermediate year 2020 transportation system plan forecast is for approximately a 2.0 percent annual increase in vehicle miles of travel to the year 2000, 1.2 percent annual increase from the year 2000 to 2007, and 0.7 percent annual increase from 2007 to the year 2020. The vehicle-miles of travel forecasts in the State implementation plan, and the regional transportation plan are consistent, with the State Implementation Plan forecast being equal to, or greater than, the regional plan forecasts. The higher rate of growth assumed in the State Implementation Plan provides latitude for potential vehicle-miles of travel increases in a year or short-term period of years which may exceed long-term average increases, for example, during short-term periods of rapid economic growth and gasoline price decline. Both the State Implementation Plan and regional transportation plan expect more substantial increases in vehicle-miles of travel between 1990 and 2000, due to anticipated continuing higher rates of increase in employment levels, declining household size and resultant growth in households and decreases in vehicle occupancy, and declines in the fuel-related costs of operating an automobile. Lower rates of increase in vehicle-miles of travel are anticipated beyond the year 2000 due to anticipated slower growth in employment and labor force levels, stability in household size and slower growth in household levels, and modest increases in the fuel-related costs of operating an automobile.

---

[4] *The Wisconsin 15 percent State Implementation Plan also assumed a 2 percent decrease in vehicle-miles of travel in 1996 due to implementation of the Federal Employee Commute Options program. The Employee Commute Options Federal mandate was eliminated on December 23, 1995, and affected ozone nonattainment areas were allowed to substitute other emission reduction efforts for the reductions expected from the Employee Commute Options program. The Wisconsin Department of Natural Resources has substituted the voluntary Wisconsin Partners for Clean Air program for the Employee Commute Options program. The Partners program requests that large employers and others voluntarily continue with vehicle trip reduction activities, Ozone Action Day efforts, or make point and area source emission reductions beyond federal and state requirements.*

The Wisconsin Department of Transportation has prepared an estimate of the actual growth in vehicle-miles of travel for the years 1990 to 1998 in the Southeastern Wisconsin Region based upon traffic counts taken by the Department which represents the universe of Highway Performance Monitoring System (HPMS) data. Traffic counts are performed by the Department every three years in each County. Based upon these counts, the vehicle-miles of travel in southeastern Wisconsin is estimated to have increased by about 2.0 percent annually from 1990 to 1998, or about the same as incorporated in the State Implementation Plan.[5]

Use of Latest Emissions Model

A second procedural requirement for the plan and program conformity determination (40CFR Part 93.111) requires use of the latest air pollutant emissions estimation model. Accordingly, this determination of conformity utilizes the latest emission estimation model available, the U. S. Environmental Protection Agency Mobile 5A air pollutant emissions estimation model. The assumptions in the emissions estimation model for the years 2001, 2007, 2010, and 2020 are presented in Table 8. This emissions estimation model is the same model used by the State of Wisconsin Department of Natural Resources in the preparation of the State Implementation Plan for Air Quality. The specific emission factors used for each of the years of analysis in the conformity determination were provided to the Regional Planning Commission by the State of Wisconsin Department of Natural Resources to assure consistency between this conformity determination and the State plan. The emission factors and conformity determination do not assume implementation of, or assume credit for, Tier 2 motor vehicle standards or low sulfur motor fuel.

Interagency and Public Consultation

A third procedural requirement for plan and program conformity determination (40CFR Part 93.112) relates to interagency and public consultation. The development of the new year 2020 regional transportation system plan, and, as well, the previous year 2010 plan upon which it was substantially based, involved interagency and public consultation, including, specifically, such consultations with respect to air quality

---

[5]*The traffic counts as taken by the Wisconsin Department of Transportation are as follows: Kenosha County (9 percent of Region vehicle-miles of travel (VMT) in 1990), 2.24 percent annual growth from 1990 to 1996; Milwaukee County (46 percent of Region VMT in 1990) 0.65 percent annual growth from 1990 to 1998; Ozaukee County (5 percent of Region VMT in 1990) 2.87 percent annual growth in VMT from 1989 to 1998; Racine County (10 percent of Region VMT in 1990) 1.50 percent annual growth in VMT from 1990 to 1996; Walworth County (6 percent of Region VMT in 1990) 1.21 percent annual growth in VMT from 1990 to 1996; Washington County (6 percent of Region VMT in 1990) 3.41 percent annual growth in VMT from 1989 to 1998, and; Waukesha County (19 percent of Region VMT in 1990) 3.21 percent annual growth in VMT from 1991 to 1997. (See Appendix C.)*

The Regional Planning Commission also prepared an estimate of the growth in vehicle-miles of travel within the Southeastern Wisconsin Region. The Commission used annual traffic counts available on the Region's freeway system, traffic counts on the surface arterial system which are available every three years, and special surface arterial counts conducted every year to factor the counts which are only available every three years. The Commission's estimate of the growth in vehicle-miles of travel from 1990 to 1996 was 2.0 percent annually, or about the same as the Wisconsin Department of Transportation estimate.

impacts and the implications for conformity of the new plan and its alternatives. The 2000-2002 transportation improvement program directly implements the plan and is consistent with the plan schedule for implementation. In particular, the State of Wisconsin Department of Transportation, the State of Wisconsin Department of Natural Resources, the U. S. Department of Transportation, and the county and local units of government were all extensively involved in the development of the year 2010 plan, and, as well, in its extension to the year 2020, including with respect to the consideration of alternatives, the consideration of the financial resources necessary to implement the plan, and the evaluation of the potential air quality impacts of the plan and plan alternatives. These Federal, State, county, and local units and agencies of government have also been consulted, and have, as members of the Commission Advisory Committee guiding the preparation of the new regional plan, reviewed and approved the travel simulation models utilized in the regional plan preparation and as well the level of detail of the transportation system plan. It should be noted, with respect to the latter, that the transportation system plan incorporates all local, express, and rapid transit facilities and services and includes both geographic expansion of service and improvement of frequency of transit service. The plan also incorporates the entire arterial street and highway network of the Region, including all arterials in both urban and rural areas and major collectors in rural areas. The agencies concerned have also given consideration to the treatment in the travel simulation modeling and in the transportation system plan of transportation control measures. In addition, there has been public consultation with respect to the regional transportation system plan, including consultation on alternatives, as well as on the recommended plan and its financial impacts and on the potential air quality impacts of the recommended plan and alternatives thereto. The consultation on the year 2020 plan includes a public informational meeting and hearing. The consultation on the previous year 2010 plan upon which the 2020 plan is based includes transmittal of a series of three newsletters to 2,500 individuals and a day-long conference on the regional plan attended by over 400 individuals and seven public informational meetings and hearings attended by over 300 persons. The public consultation on the 2020 plan is documented in *Record of Public Informational Meetings and Hearings: Preliminary Regional Land Use and Transportation System Plans for Southeastern Wisconsin: 2020.* The public consultation on the previous 2010 plan is documented in the *Record of Public Informational Meetings and Public Hearings: Preliminary New Regional Transportation System Plan for Southeastern Wisconsin: Design Year 2010.* Included in these reports are responses to every comment received on the plan and its social, economic, and environmental impacts.

State and county and municipal governments have also been directly involved in the preparation of this 2000-2002 transportation improvement program through their submittal of projects for inclusion in the transportation improvement program and their consideration and approval of the transportation improvement program. In addition, a public informational meeting and hearing was held on the 2000-2002 transportation improvement program and the attendant year 2020 plan which the program implements, and the attendant conformity determination. The notice for the public hearing on the program, the comments received, and the staff and Advisory Committee response to the comments are presented in an appendix to

the transportation improvement program. In addition, the 2000-2002 transportation improvement program and its conformity determination, and, as well, the year 2020 plan and the year 2010 plan upon which the 2020 plan was based, were reviewed and approved by the Commission's Intergovernmental Coordinating and Advisory Committees on Transportation System Planning and Programming for the Kenosha, Milwaukee, and Racine urbanized area which includes representation of all local units of government within the three urbanized areas of Southeastern Wisconsin on a population proportional basis, as well as representation from State government including the Wisconsin Departments of Transportation and Natural Resources, and Federal government including the U. S. Department of Transportation and Environmental Protection Agency.

Provision for Timely Implementation of Transportation Control Measures

A fourth procedural requirement for plan and program conformity determination, (40CFR Part 93.113) is that the transportation plan and program must provide for timely implementation of all transportation control measures in the State Implementation Plan for Air Quality, and the transportation plan or program may not interfere with the implementation of any true transportation control measure in the State Implementation Plan. There are no transportation control measures in the State Plan. The State plan submitted in November 1993 by the State of Wisconsin Department of Natural Resources did include implementation of the Federally mandated Employee Commute Options program. The Employee Commute Options Mandate was eliminated on December 23, 1995, and affected ozone nonattainment areas were allowed to substitute other emission reduction efforts for the reductions expected from the Employee Commute Options program. The Wisconsin Department of Natural Resources formally withdrew its Employee Commute Options program State Implementation Plan in May 1996 (after U. S. Environmental Protection Agency approval of the Wisconsin 15% State Implementation Plan in March 1996). The Wisconsin Department of Natural Resources indicated that it would be substituting the Wisconsin Partners for Clean Air program for the Employee Commute Options program. The Partners program requests that large employers and other interested parties continue with any previously mandated Employee Commute Options related trip reduction activities, sign a pledge to promote trip reduction and transit promotion activities, promote Ozone Action Day efforts, or make point and area source emission reductions beyond current federal and state requirements. The year 2020 regional transportation system plan and 2000 through 2002 transportation improvement program would in no way interfere with the implementation of the Partners program and would assist in its implementation. The transportation system plan recommends a number of measures which should serve to assist in the implementation of the trip reduction goals that are a key component of the Partners program, including the recommendation of an expansion of transit service which should make transit a more available and attractive option for commuters. Another recommendation in the plan is for the continuation and expansion of the areawide program operated by the Wisconsin Department of Transportation to promote carpooling and vanpooling, as well as other work-related travel demand management measures. The 2000-2002 transportation improvement program includes a number of

measures which should serve to significantly assist in the implementation of the Partners program, including the provision of transit service as an option for commuters.

Transportation Plan Content

A fifth procedural requirement for plan and program conformity determination is the content, or level of detail, of the transportation plan. The transportation plan and the travel simulation modeling analysis of attendant plan emissions fully meet the requirements of transportation plan content (40CFR 93.106). The plan includes all additions to the transportation system with respect to both highway and public transit. All additions of arterial street system highway capacity, including widening of arterial streets to provide additional traffic lanes and construction of new arterial facilities, are included in the plan. This arterial street system includes over 3,600 miles of streets within the seven-county Southeastern Wisconsin Region, or about one-third of the total street system, and includes all state, county, and municipal arterials within urban areas and all arterials and major collectors within rural areas of the Region. The plan also includes the total transit system, including the local, express, and rapid transit system components, and includes all aspects of plan-recommended improvements including frequency of service and expansion of geographic system coverage.

The travel simulation modeling conducted under this conformity analysis is fully consistent with, indeed identical to, the travel simulation modeling conducted by the Commission for the preparation of the regional transportation system plan and for the preparation of the State Implementation Plan. The travel simulation modeling for the conformity determination is sensitive to the added capacity and service provided by each highway and transit plan proposal, accurately reflecting its potential effect through changes in travel time and attendant route choice, mode choice, travel patterns, and trip generation. The transportation system plan and its treatment in the travel simulation modeling analysis goes beyond the Federally required consideration of Federally defined regionally significant projects, that is, principal arterials and transit fixed guideways, in that it includes all arterial and public transit facilities. Also, the transportation system plan is consistent with the adopted regional land use plan since it was designed to serve and promote implementation of the land use plan. The consistency between the transportation system and land use plans was tested by comparing both the accessibility provided under the transportation plan, and the incremental accessibility provided by the transportation system plan relative to a "no-build" plan, to the land use plan.

Transportation Emissions and Travel Modeling Procedures

The procedures for estimating the regional transportation plan and program emissions also fully meet the emission and travel modeling requirements, (40CFR 93.122).[6] Specifically, the travel simulation modeling

---

[6]*A U. S. Department of Transportation, Federal Highway Administration report issued May 21, 1997, on the recently completed Federal Review of the travel modeling conducted by the Commission, is provided in Appendix D, along with a Commission report which cites how each requirement in 40CFR 93.122 is met.*

analysis for this conformity determination incorporates in the analysis all planned highway capacity improvements and expansion, for all arterial facilities, including major collectors in rural areas, and for all transit improvements and expansion. The travel simulation modeling analysis does not assume emission reductions for any transportation control measures or control programs external to the transportation system, as, for example, changes in motor fuel volatility or vehicle inspection and maintenance programs, except with respect to such programs incorporated in the State Implementation Plan. Such programs are incorporated in both the "baseline," or "no-build," and in the transportation system plan and program, or "action" scenarios, for determination of potential plan- and program-related emission reductions.

The Federal requirements for determination of conformity after January 1, 1997, (40 CFR 93.122(b)), have been met under this conformity determination. The travel and traffic simulation models used to estimate the transportation plan and improvement program air pollutant emissions are network-based models which forecast travel demand and traffic volume based upon economic and demographic forecasts, planned land use allocation patterns, and the characteristics of the transportation system. As already noted, the travel models are fully described in Chapter VII, "Travel Simulation Models," of SEWRPC Planning Report No. 41, *A Regional Transportation System Plan for Southeastern Wisconsin: 2010.* The models were calibrated with 1991 large-scale travel survey data and represent state-of-the-art professional practice approved by the Commission Technical and Intergovernmental Coordinating and Advisory Committee on Regional Transportation System Planning, which Committee includes representation from Federal, State, and local governments. The models were approved for use in a Federal Transit Administration transit fixed-guideway alternatives analysis.[7]

The models were validated for the years 1990and 1991 using 1990 census data and land use inventory data, and 1991 travel survey data and transportation system inventory data with respect to simulation of both transit ridership and arterial street and highway traffic by comparing model estimates to actual counts. The future travel and traffic forecasts from the models have been compared to historic trends. The population, employment, land use, and other assumptions attendant to the travel and traffic forecast are documented.

The models incorporate sensitivity to peak-hour traffic congestion and travel time through a capacity restrained traffic assignment. A peak hour traffic assignment with forecast peak hour traffic volumes and speeds is prepared. The peak hour volumes and speeds are sensitive to the total travel volume on the facility and the potential for the spreading of peak hour traffic to adjacent hours of the day. The models incorporate the peak-hour congestion and travel times as determined in traffic assignment in the trip distribution model to determine travel patterns and mode choice model to determine transit ridership.

---

[7]*The models were documented in a methods report prepared for the east-west corridor transit study,* Travel Simulation Models for the East-West Corridor Transit Study, *May 1993.*

The models incorporate an iteration, or feedback, of model steps so that the travel times used to determine travel patterns, transit ridership, and route choice are consistent with the travel times established in capacity restraint traffic assignment.

The constrained peak hour, and the free flow, or off-peak, travel speeds incorporated in the models are based upon actual field surveyed speeds and travel times. The models estimate peak and off-peak travel times and utilize peak-travel times in trip distribution and modal choice of peak travel (work and school travel). Off-peak travel times are used in trip distribution and mode choice for off-peak travel (shopping and other travel).

The model steps of trip distribution and mode choice are directly sensitive to the price of travel, as well as travel time, including public transit travel time.

The consistency of the transportation system plan and the underlying land use plan is directly established, tested, and documented. First, the transportation plan is designed to serve the regional land use plan, which is an agreed upon desirable pattern of future land use and not a projected pattern of likely future land use. The transportation plan only includes highway and transit improvements which address existing needs and travel demands and those future needs and travel demands which are generated by the regional land use plan. Second, to test this consistency of the regional land use and transportation plans, all transportation improvements are mapped and compared to areas of existing and planned development under the land use plan, and areas which are to be protected under the plan from development. The Commission's Advisory Committee on Regional Transportation System Planning concluded that this test established a consistency between the regional transportation system plan and underlying land use plan. Third, an additional test of the consistency of the regional land use and transportation plans was the preparation of forecasts of the accessibility provided by the transportation plan to each subarea of the region, as defined by traffic analysis zones. The total level of accessibility provided by the transportation plan, and, as well, the incremental level of accessibility compared to a "no-build" transportation plan was compared to areas of existing and planned development under the regional land use plan, and areas under the plan which are to be protected from development. The Commission's Advisory Committee on Regional Transportation System Planning concluded that this comparison established that the transportation plan was consistent with the regional land use plan as it provided higher and increased accessibility to areas planned for development, and lower and unchanged levels of accessibility to areas planned to be protected from development.

The vehicle-miles of travel estimated by the models in a base year of its validation (1990 and 1991) have been compared to estimates prepared for the State Implementation Plan with an enhanced Highway Performance Monitoring System (HPMS), and it has been determined that the 1990 model estimate is consistent with the 1990 inventory estimate, being within 1 percent. In addition, the Commission has maintained for over 15 years procedures to estimate off-network roadway travel. The procedures have been

periodically reevaluated and validated. Such procedures were developed as part of the first Statewide implementation plan for air quality, prepared by the Regional Planning Commission in 1978, and provide estimates for use in regional transportation system plan and State Implementation Plan preparation and conformity determination. The method is based on analyses which estimate off-network travel by calculating total intrazonal travel and trip lengths, based upon zone size and development distribution. The analyses indicate off-network travel represents about 9 percent of total travel. This is consistent with independent highway performance monitoring system estimates. Off-network travel is estimated for each alternative by factoring network travel forecasts by approximately 10 percent.

Also, for use in capacity restrained traffic assignment, as well as in trip distribution and mode choice, the simulation model estimates traffic speeds sensitive to the forecast traffic volume on each roadway segment for both peak-hour and average 24-hour conditions, the latter based upon the proportion of traffic traveling under peak-hour and congested conditions and the proportion of traffic traveling under off-peak conditions. The estimated congested traffic speeds are calculated on the basis of a model calibrated using inventoried speeds and congestion which relates reductions in speed to the ratio of traffic volume to design capacity. The model was validated through comparison of model-estimated speeds to actual arterial street and highway segment operating speeds.

Finally, the emissions model and attendant assumptions utilized in the this conformity determination are identical to those used in the preparation of the State Implementation Plan.

Conformity Determination Criteria--Consistency with Motor Vehicle Emissions Budget

One test of transportation plan and program conformity (40CFR 93.118) requires that the transportation system emissions forecasts under the transportation plan and transportation improvement program must be consistent with, that is, equal to, or less than, the transportation systems emissions budget, or "motor vehicle emissions budget," in the State Implementation Plan for both the six-county severe nonattainment area for ozone standards and as well for Walworth County.

With respect to the six county area, the State Implementation Plan for this conformity analysis includes the implementation plan submitted to the Federal government by the Wisconsin Department of Natural Resources in November 1993, which presents a motor vehicle emissions budget for the year 1996 (58.13 tons per hot summer weekday) as part of the required implementation plan to reduce total volatile organic compound emissions by 15 percent between 1990 and 1996. The State Implementation Plan for the six county area also includes a motor vehicle emissions budget of 50.27 tons on a hot summer weekday for the year 1999 from the implementation plan submitted in December 1997 by the Wisconsin Department of Natural Resources to reduce further volatile organic compound emissions by 1999.

The transportation system emissions attendant to the year 2020 transportation system plan and 2000-2002 transportation improvement program were forecast through application of the Commission travel and traffic simulation models to the transportation system plan and improvement program under the year 2020 population, households, and employment forecasts and the year 2020 regional land use plan. Table 9 presents the forecast vehicle-miles of travel attendant to the transportation system plan by functional classification and speed range for the inventory year 1990 and for forecast years of 2001, 2007, 2010, and 2020. The transportation plan projects incorporated in each forecast year were listed in Tables 2 (transit) and 5 (arterial street and highway).

The year 2000-2002 transportation improvement program is consistent with the year 2020 regional transportation system plan and the plan's implementation schedule. All year 2000-2002 transportation improvement program projects, that is, projects with air quality impacts, are included in the year 2020 plan. Also, the year 2000-2002 transportation improvement program includes all projects essential to implement the year 2020 plan on schedule. The satisfaction of these two tests are demonstrated in Tables 10 and 11.

Table 10 lists all projects with air quality impact, so-called "nonexempt" projects in the year 2000-2002 transportation improvement program and confirms that they are included in the year 2020 regional transportation system plan and confirms that their schedule in the improvement program is consistent with their schedule for project completion proposed in the transportation plan.[8]

Table 11 lists all projects with air quality impact proposed in the year 2020 transportation plan, along with the plan-recommended implementation schedule, and identifies the plan projects with year 2000-2002 transportation improvement program projects which implement the plan projects consistent with the year 2020 plan implementation schedule.

Table 12 presents for the years 2001, 2007, 2010, and 2020 forecast volatile organic compound emissions from the transportation system within the six county severe ozone nonattainment area under the year 2020 regional transportation plan and year 2020-2002 transportation improvement program, and compares those forecast emissions to the year 1996 and 1999 transportation system emissions budgets in the State Implementation Plan for the Air Quality Implementation Plan for Air Quality. In all cases, the transportation plan and program forecast emissions are less than the emissions budgets in the State Implementation Plan; thus this conformity criteria is fully met by the year 2020 regional transportation plan and 2000-2002 transportation improvement program.

As described earlier in this report, the year 2000-2002 transportation improvement program is consistent with the year 2020 regional transportation system plan and the plan's implementation schedule. All year

[8] *All 2000-2002 transportation improvement program projects are listed in Appendix B of this report.*

Table 11

PROJECTS WITH AIR QUALITY IMPACTS IN THE REGIONAL TRANSPORTATION SYSTEM PLAN AND THEIR RELATIONSHIP TO PROJECTS IN THE 2000-2002 TRANSPORTATION IMPROVEMENT PROGRAM

Year Open to Traffic	County	Improvement Type	Facility	Termini	Description
2001[a,b]	Kenosha	Widening	STH 31	CTH S to CTH KR	Widen from two to four traffic lanes
2001[a,b]			STH 50	Walworth County line to 381st Avenue	Widen from two to four traffic lanes
2001[a]		Expansion	CTH KD extension	CTH EM to CTH F	Construct two lanes on new alignment
2001[a,b]			39th Avenue extension	18th Street to 15th Street	Construct two lanes on new alignment
2001[a,b]	Milwaukee	Widening	CTH BB	Hawthorne Lane to USH 41	Widen from two to four traffic lanes
2001[a,b]			Good Hope Road	Waukesha County line to USH 41/USH 45	Widen from two to four traffic lanes
2001[a,b]			Layton Avenue	108th Street to 84th Street	Widen from two to four traffic lanes
2001[a]			Whitnall Avenue	CTH Y to Nicholson Avenue	Widen from two to four traffic lanes
2001[a]			Whitnall Avenue	Clement Avenue to Brust Avenue	Widen from two to four traffic lanes
2001[a,b]			124th Street	STH 145 to USH 41/USH 45	Widen from two to four traffic lanes
2001[a,b]		Expansion	124th Street extension	STH 100 to STH 145	Construct four lanes on new alignment
2001[a]	Ozaukee	Widening	CTH W	Sunnydale Lane to Zedler lane	Widen from two to four traffic lanes
2001[a,b]	Racine	Widening	STH 31	CTH KR to STH 11	Widen from two to four traffic lanes
2001[a,b]			STH 32	A point about 0.3 mile north of CTH G to Three Mile Road	Widen from two to four traffic lanes
2001[a,b]			STH 36/STH 83	Wegge Road to Tuet Road	Widen from two to four traffic lanes
2001[a]			CTH Y	CTH KR to CTH X	Widen from two to four traffic lanes
2001[a,b]	Walworth	Widening	STH 50	USH 12 to the Kenosha County line	Widen from two to four traffic lanes
2001[a,b]	Waukesha	Widening	IH 94	CTH G to CTH T	Widen from four to six traffic lanes
2001[a,b]			STH 59	Calhoun Road to Milwaukee County Line	Widen from two to four traffic lanes
2001[a,b]			STH 59	Poplar Creek to Johnson Road	Widen from two to four traffic lanes
2001[a,b]			STH 164	STH 59 to CTH ES	Widen from two to four traffic lanes
2001[a]			CTH YY	CTH VV to CTH W	Widen from two to four traffic lanes
2001[a,b]		Expansion	Brookfield Road extension	Davidson Road to STH 59	Construct two lanes on new alignment
2007	Kenosha	Widening	STH 50	IH 94/USH 41 to 39th Avenue	Widen from four to six traffic lanes
2007			STH 165	IH 94/USH 41 to a point approximately one mile West of CTH H	Widen from two to four traffic lanes
2007			Washington Road	39th Avenue to STH 32	Widen from two to four traffic lanes
2007			22nd Avenue	CTH L to CTH E	Widen from two to four traffic lanes
2007			30th Avenue	27th Street to CTH E	Widen from two to four traffic lanes
2007			39th Avenue	Van Buren Road to STH 50	Widen from two to four traffic lanes
2007			60th Street	39th Avenue to STH 32	Widen from two to four traffic lanes
2007			63rd Street	22nd Avenue to STH 32	Widen from two to four traffic lanes
2007			104th Avenue	STH 50 to STH 158	Widen from two to four traffic lanes
2007		Expansion	IH 94/USH 41	CTH ML	Construct new interchange
2007			CTH ML extension	CTH H to STH 31	Construct two lanes on new alignment
2007			52nd Avenue extension	93rd Street to STH 165	Construct two lanes on new alignment
2007			85th Street extension	Sheridan Road to 7th Avenue	Construct two lanes on new alignment
2007[a]	Milwaukee	Widening	STH 32	County Line Road to STH 100	Widen from two to four traffic lanes
2007[a]			STH 100	STH 38 to STH 32	Widen from two to four traffic lanes
2007[a]			STH 100	STH 36 to 81st Street	Widen from two to four traffic lanes
2007[a]			STH 100	81st Street to 60th Street	Widen from two to four traffic lanes
2007[a]			STH 100	60th Street to USH 41	Widen from two to four traffic lanes
2007[a]			CTH U	Rawson Avenue to Puetz Road	Widen from two to four traffic lanes
2007[a]			CTH ZZ	STH 38 to Pennsylvania Avenue	Widen from two to four traffic lanes
2007			Port Washington Road	Bender Road to W. Daphne Road	Widen from two to four traffic lanes
2007[a]			Whitnall Avenue	Nicholson Avenue to Packard Avenue	Widen from two to four traffic lanes
2007			91st Street	STH 100 to Ozaukee County Line	Widen from two to four traffic lanes
2007			107th Street	Good Hope Road to STH 145	Widen from two to four traffic lanes
2007[a]			124th Street	STH 190 to Hampton Avenue	Widen from two to four traffic lanes
2007		Expansion	Canal Street extension	USH 41 to 21st Street	Construct two lanes on new alignment
2007			Canal Street extension	6th Street to 2nd Street	Construct two lanes on new alignment
2007	Ozaukee	Widening	STH 33	Progress Drive to Foster Street	Widen from two to four traffic lanes
2007[a]			STH 33	IH 43 to Spring Street	Widen from two to four traffic lanes
2007[a]			STH 57	IH 43 to Sheboygan County line	Widen from two to four traffic lanes
2007[a]			STH 60	STH 57 to IH 43	Widen from two to four traffic lanes
2007[a]			CTH W	STH 167 to Highland Road	Widen from two to four traffic lanes
2007			Columbia Road	Bridge Street to Chateau Drive	Widen from two to four traffic lanes
2007			Pioneer Road (CTH C)	STH 181 to Green Bay Road	Widen from two to four traffic lanes
2007			Pioneer Road (CTH C)	Green Bay Road to IH 43	Widen from two to four traffic lanes
2007[a]			Wauwatosa Road (STH 181)	STH 167 to CTH C	Widen from two to four traffic lanes
2007[a]	Racine	Widening	STH 11	IH 94 to CTH H	Widen from two to four traffic lanes
2007[a]			STH 11	86th Street in the Village of Sturtevant to Willow Road	Widen from two to four traffic lanes
2007[a]			STH 11	Willow Road to STH 31	Widen from four to six traffic lanes
2007			STH 20	Oakes Road to Sunnyslope Road	Widen from four to six traffic lanes
2007[a]			STH 32	Milwaukee County to Five Mile Road	Widen from two to four traffic lanes

Table 11 (continued)

Year Open to Traffic	County	Improvement Type	Facility	Termini	Description
2007[a]	Racine (continued)	Widening (continued)	CTH K	Union Pacific Railway to STH 38	Widen from two to four traffic lanes
2007			Calumet Street	Robert Street to Bridge Street	Widen from two to four traffic lanes
2007			Three Mile Road	STH 32 to CTH G	Widen from two to four traffic lanes
2007[a]		Expansion	Burlington bypass	(STH 36) Milwaukee Avenue to Walworth County line	Construct four lanes on new alignment
2007			Calumet Street extension	Market Street to Robert Street	Construct four lanes on new alignment
2007			Commerce Street/Pine Street	Herman Street to Origen Street	Construct two lanes on new alignment
2007			Memorial Drive extension	Chicory Road to CTH KR	Construct two lanes on new alignment
2007			Oakes Road extension	STH 20 to Airline Road	Construct two lanes on new alignment
2007			Oakes Road extension	Braun Road to STH 11	Construct two lanes on new alignment
2007[a]			State Street/Adams Street Connection	Calumet Street to STH 11	Construct two lanes on new alignment
2007[a]	Walworth	Widening	USH 14	Proposed STH 67 bypass to McHenry County line	Widen from two to four traffic lanes
2007[a]			STH 50	STH 67 to Geneva Street	Widen from two to four traffic lanes
2007[a]			STH 50	CTH H to Edwards Boulevard	Widen from two to four traffic lanes
2007[a,b]		Expansion	USH 12 freeway	Cold Spring Road to Howard Road	Construct four lanes on new alignment
2007[a]			Burlington bypass	STH 11 Racine-Walworth County Line	Construct four lanes on new alignment
2007[a]			STH 120 bypass	Townline Road to existing STH 120 at Willow Road	Construct two lanes on existing and new alignment
2007[a]	Washington	Widening	USH 45	CTH D to Prospect Drive	Widen from two to four traffic lanes
2007[a]			STH 60	USH 41 to CTH P	Widen from two to four traffic lanes
2007[a]			CTH Q	Division Road to Pilgrim Road	Widen from two to four traffic lanes
2007[a]			CTH Y	CTH Q to USH 41/45	Widen from two to four traffic lanes
2007			Decorah Road	7th Avenue to Indiana Avenue	Widen from two to four traffic lanes
2007[a]			STH 164	STH 175 to STH 60	Widen from two to four traffic lanes
2007			Main Street	Decorah Street to Walnut Street	Widen from two to four traffic lanes
2007			Paradise Drive	A point 1,250 feet east of USH 45 to Main Street	Widen from two to four traffic lanes
2007			STH 33	Rock River to USH 41	Widen from two to four traffic lanes
2007[a]		Expansion	STH 33	Trenton Road to Oak Road	Construct four lanes on new alignment
2007[a]			STH 83	CTH E to Monroe Avenue	Construct two lanes on new alignment
2007			STH 83	Monroe Avenue to Lincoln Avenue	Construct two lanes on new alignment
2007			Arthur Road extension	CTH N to Arthur Road	Construct two lanes on new alignment
2007			Monroe Avenue extension	Monroe Avenue to Pond Road	Construct two lanes on new alignment
2007			N. River Road extension	N. River Road to STH 144	Construct two lanes on new alignment
2007			18th Avenue extension	Jefferson Street to CTH D	Construct two lanes on new alignment
2007[a]	Waukesha	Widening	STH 59	STH 164 to Poplar Creek	Widen from two to four traffic lanes
2007[a]			STH 59	Johnson Road to Calhoun Road	Widen from two to four traffic lanes
2007			STH 83	IH 94 to USH 18	Widen from two to four traffic lanes
2007[a]			STH 83	Mariner Drive to STH 16	Widen from two to four traffic lanes
2007[a]			STH 83	IH 43 to CTH NN	Widen from two to four traffic lanes
2007			STH 164	City of Waukesha north corporate limit to IH 94	Widen from four to six traffic lanes
2007[a]			STH 164	STH 190 to Washington County line	Widen from two to four traffic lanes
2007			STH 190	CTH Y to Brookfield Road	Widen from four to six traffic lanes
2007			CTH D	Moorland Road to Milwaukee County line	Widen from two to four traffic lanes
2007[a]			CTH L	CTH Y to CTH HH	Widen from two to four traffic lanes
2007[a]			CTH J	Rockwood Drive to STH 190	Widen from two to four traffic lanes
2007			CTH Q	CTH V to STH 175	Widen from two to four traffic lanes
2007			CTH X	CTH H to STH 59	Widen from two to four traffic lanes
2007			CTH X	STH 59 to Moreland Boulevard	Widen from two to four traffic lanes
2007			CTH Y	Hillendale Drive to CTH HH	Widen from two to four traffic lanes
2007[a]			CTH Y	USH 18 to North Avenue	Widen from two to four traffic lanes
2007			CTH TT	MacArthur Road to USH 18	Widen from two to four traffic lanes
2007[a]			CTH VV	CTH Y to Bette Drive	Widen from two to four traffic lanes
2007			CTH YY	Lisbon Road to CTH VV	Widen from two to four traffic lanes
2007[a]			Calhoun Road	IH 94 to USH 18	Widen from two to four traffic lanes
2007[a]			Calhoun Road	USH 18 to Gebhardt Road	Widen from two to four traffic lanes
2007[a]			Calhoun Road	CTH D to STH 59	Widen from two to four traffic lanes
2007			North Avenue	Barker Road to 147th Street	Widen from two to four traffic lanes
2007			Pilgrim Road	USH 41/USH 45 to Washington County Line	Widen from two to four traffic lanes
2007[a]			Sunset Drive	Tenny Avenue to STH 59/STH 164	Widen from two to four traffic lanes
2007		Expansion	IH 94	CTH P	Construct new interchange
2007[a]			STH 16/STH 67 bypass	Wisconsin Avenue to Jefferson County line	Construct four lanes on new alignment
2007			Lake Drive extension	Lapham Street to STH 67	Construct two lanes on new alignment
2007			Mukwonago bypass	IH 43 to CTH ES	Construct two lanes on new alignment
2007			Valley Road	STH 67 to CTH P	Construct two lanes on new alignment
2010	Kenosha	Widening	STH 32	128th Street to CTH T	Widen from two to four traffic lanes
2010			STH 83	128th Street to STH 50	Widen from two to four traffic lanes
2010			STH 158	104th Avenue to STH 31	Widen from two to four traffic lanes
2010			STH 165	STH 31 to STH 32	Widen from two to four traffic lanes
2010			CTH E	STH 31 to STH 32	Widen from two to four traffic lanes

Table 11 (continued)

Year Open to Traffic	County	Improvement Type	Facility	Termini	Description
2010	Kenosha (continued)	Widening (continued)	CTH S	IH 94 to STH 31	Widen from two to four traffic lanes
2010		Expansion	CTH F extension	CTH O to 89th Street	Construct two lanes on new alignment
2010			39th Avenue extension	24th Street to 18th Street	Construct two lanes on new alignment
2010	Milwaukee	Widening	STH 38	County Line Road to Oakwood Road	Widen from two to four traffic lanes
2010			Morgan Avenue	Forest Home Avenue to 43rd Street	Widen from two to four traffic lanes
2010			Pennsylvania Avenue	Drexel Avenue to College Avenue	Widen from two to four traffic lanes
2010			124th Street	North Avenue to Watertown Plank Road	Widen from two to four traffic lanes
2010	Ozaukee	Widening	STH 33	Washington County line to Progress Drive	Widen from two to four traffic lanes
2010			STH 57	Milwaukee County line to STH 167	Widen from two to four traffic lanes
2010			STH 60	Washington County line to STH 181	Widen from two to four traffic lanes
2010			STH 60	STH 181 to Wisconsin Avenue	Widen from two to four traffic lanes
2010			STH 167	Washington County line to Wauwatosa Road	Widen from two to four traffic lanes
2010			Wauwatosa Road (STH 181)	CTH C to STH 60	Widen from two to four traffic lanes
2010		Expansion	IH 43	Highland Road	Construct new interchange
2010			Cold Springs Road	CTH O to STH 33	Construct two lanes on new alignment
2010			Maple Road extension	Cedar Creek Road to Rose Street at the Village of Grafton	Construct two lanes on new alignment
2010	Racine	Widening	STH 20	IH 94/USH 41 to Oakes Road	Widen from four to six traffic lanes
2010			STH 38	Milwaukee County to CTH K	Widen from two to four traffic lanes
2010			CTH C	CTH V to Airline Road	Widen from two to four traffic lanes
2010			CTH C	Airline Road to Sunnyslope Road	Widen from two to four traffic lanes
2010			CTH K	IH 94 to CTH H	Widen from two to four traffic lanes
2010			CTH K	CTH H to Union Pacific Railway	Widen from two to four traffic lanes
2010		Expansion	Five Mile Road extension	STH 32 to Erie Street	Construct two lanes on new alignment
2010			Oakes Road extension	21st Street to 16th Street	Construct two lanes on new alignment
2010			Oakes Road extension	STH 11 to 21st Street	Construct two lanes on new alignment
2010			21st Street extension	STH 31 to Oakes Road	Construct two lanes on new alignment
2010			90th Street extension	STH 20 to CTH C	Construct two lanes on new alignment
2010	Walworth	Widening	STH 11	CTH O to 7th Street	Widen from two to four traffic lanes
2010			USH 14	CTH O to proposed STH 67 bypass	Widen from two to four traffic lanes
2010			USH 14	Rock County line to CTH O	Widen from two to four traffic lanes
2010			STH 50	STH 11 to Wisconsin Street	Widen from two to four traffic lanes
2010			STH 50	IH 43 to STH 67	Widen from two to four traffic lanes
2010			STH 67	IH 43 to the proposed STH 67 bypass at STH 50	Widen from two to four traffic lanes
2010			STH 89	Willis Ray Road to Whitewater Street	Widen from two to four traffic lanes
2010		Expansion	Main Street extension	Frontage Road to Rock County line	Construct two lanes on new alignment
2010			New facility	CTH H east to STH 11	Construct two lanes on new alignment
2010*	Washington	Widening	STH 33	Oak Road to Ozaukee County line	Widen from two to four traffic lanes
2010			STH 33	USH 41 to CTH Z	Widen from two to four traffic lanes

2010			STH 167	Pilgrim Road to Ozaukee County line	Widen from two to four traffic lanes
2010		Expansion	Division Road extension	STH 167 to Freistadt Road	Construct two lanes on new alignment
2010			Jefferson Street extension	Trenton Road to N. River Road	Construct two lanes on new alignment
2010			Pioneer Road extension	CTH J to CTH CC	Construct two lanes on new alignment
2010			Taylor Road extension	Pond Road to STH 60	Construct two lanes on new alignment
2010			Trenton Road extension	STH 33 to Maple Road	Construct two lanes on new alignment
2010	Waukesha	Widening	STH 59	STH 83 to ST. Paul Avenue	Widen from two to four traffic lanes
2010			STH 67	CTH B to IH 94	Widen from four to six traffic lanes
2010			STH 83	CTH NN to STH 59	Widen from two to four traffic lanes
2010			STH 145	Milwaukee County line to Washington County line	Widen from two to four traffic lanes
2010			STH 190	STH 164 to CTH Y	Widen from four to six traffic lanes
2010			CTH D	STH 59/STH 164 to Moorland Road	Widen from two to four traffic lanes
2010			CTH K	CTH Y to Calhoun Road	Widen from two to four traffic lanes
2010			CTH T	Golf Road to CTH SS	Widen from two to four traffic lanes
2010			CTH Y	IH 43 to Coffee Road	Widen from two to four traffic lanes
2010			CTH Y	STH 59/STH 164 to Coffee Road	Widen from two to four traffic lanes
2010			CTH VV	STH 164 to CTH Y	Widen from two to four traffic lanes
2010			Calhoun Road	STH 59 to IH 94	Widen from two to four traffic lanes
2010			Grandview Boulevard	USH 18 to Northview Road	Widen from two to four traffic lanes
2010			Hampton Road	Lisbon Road to 132nd Street	Widen from two to four traffic lanes
2010			Lisbon Road	Calhoun Road to Hampton Road	Widen from two to four traffic lanes
2010			Meadowbrook Road	Northview Road to IH 94	Widen from two to four traffic lanes
2010			Moorland Road	CTH L to IH 43	Widen from two to four traffic lanes
2010			North Avenue	Lilly Road to 124th Street	Widen from two to four traffic lanes
2010			Pilgrim Road	North Avenue to Lisbon Road	Widen from two to four traffic lanes
2010			Pilgrim Road	USH 18 to North Avenue	Widen from two to four traffic lanes
2010			Racine Avenue	Downing Drive to STH 59/STH 164	Widen from two to four traffic lanes
2010			Waukesha west bypass	Northview Road to USH 18	Widen from two to four traffic lanes
2010*		Expansion	IH 94	Calhoun Road	Construct new interchange
2010			CTH KE realignment	CTH K to a point about 800 feet north	Construct two lanes on new alignment

Table 11 (continued)

Year Open to Traffic	County	Improvement Type	Facility	Termini	Description
2010	Waukesha (continued)	Expansion (continued)	Moorland Road extension	Woods Road to CTH L	Construct two lanes on new alignment
2010			Oconomowoc Parkway	CTH Z to STH 67	Construct two lanes on new alignment
2010			124th Street	North Avenue to Watertown Plank Road	Widen from two to four traffic lanes
2020	Kenosha	Widening	Roosevelt Road	39th Avenue to 63rd Street	Widen from two to four traffic lanes
2020			22nd Avenue	CTH E to CTH KR	Widen from two to four traffic lanes
2020		Expansion	CTH Q	184th Street extended to 168th Street	Construct two lanes on new alignment
2020	Milwaukee	Widening	STH 100	IH 43 to STH 24	Widen from six to eight traffic lanes
2020			CTH ZZ	STH 36 to USH 41	Widen from two to four traffic lanes
2020			Pennsylvania Avenue	STH 100 to Drexel Avenue	Widen from two to four traffic lanes
2020		Expansion	15th Avenue extension	STH 100 to Elm Road	Construct two lanes on new alignment
2020	Ozaukee	Expansion	Granville Road	Highland Road to Freistadt Road	Construct two lanes on new alignment
2020			River Road extension	Bonniwell Road to Highland Road	Construct two lanes on new alignment
2020			River Road extension	Freistadt Road to Grace Avenue	Construct two lanes on new alignment
2020			Walters Street extension	CTH LL to Grant Street	Construct two lanes on new alignment
2020	Racine	Widening	STH 11	71st Street in the Village of Union Grove to IH 94	Widen from two to four traffic lanes
2020			STH 20	USH 45 to a point 0.73 mile west of CTH C	Widen from two to four traffic lanes
2020			STH 31	Four Mile Road to STH 32	Widen from two to four traffic lanes
2020		Expansion	CTH K extension	Britton Road to 108th Street	Construct two lanes on new alignment
2020	Walworth	Widening	STH 50	Pearson Drive to Madison Street	Widen from two to four traffic lanes
2020			STH 120	STH 36 to USH 12	Widen from two to four traffic lanes
2020		Expansion	IH 43	CTH O	Construct new interchange
2020			USH 12 freeway[c]	Howard Road to Elkhorn	Construct four lanes on new alignment
2020			USH 12 freeway	CTH H to McHenry County line	Construct four lanes on new alignment
2020			STH 67 bypass (Walworth, Fontana, and Williams Bay)	Existing STH 67 at Village of Walworth south corporate limits to existing STH 67 at STH 50	Construct four lanes generally on new alignment
2020			CTH P realignment	Territorial Road to CTH A	Construct two lanes on new alignment
2020			Willow Road extension	West Side Road to CTH H	Construct two lanes on new alignment
2020			New facility	STH 67 west to STH 11	Construct two lanes on new alignment
2020			New facility	STH 11 north to CTH H	Construct two lanes on new alignment
2020[a]	Washington	Widening	STH 164	CTH Q to STH 175	Widen from two to four traffic lanes
2020		Expansion	Kettleview Road extension	CTH H to STH 28	Construct two lanes on new alignment
2020			Kettleview Road extension	STH 33 to Schuster Drive	Construct two lanes on new alignment
2020			Schuster Drive extension	Schuster Drive to Beaver Dam Rd	Construct two lanes on new alignment
2020			Wacker Drive extension	STH 60 to Lee Road	Construct two lanes on new alignment
2020	Waukesha	Widening	USH 18	STH 83 to CTH TT	Widen from two to four traffic lanes
2020			STH 67	IH 94 to USH 18	Widen from two to four traffic lanes
2020			CTH Y	STH 74 to CTH Q	Widen from two to four traffic lanes
2020			CTH Y	CTH K to STH 74	Widen from two to four traffic lanes
2020			CTH Y	North Avenue to STH 190	Widen from two to four traffic lanes
2020			Calhoun Road	CTH ES to CTH D	Widen from two to four traffic lanes
2020			Calhoun Road	North Avenue to STH 190	Widen from two to four traffic lanes
2020			Johnson Road	Coffee Road to Lincoln Avenue	Widen from two to four traffic lanes
2020			Johnson Road	A point about 2,000 feet south of STH 59 to STH 59	Widen from two to four traffic lanes
2020		Expansion	STH 83	STH 16 to Thompson Lane	Construct two lanes on new alignment
2020			STH 83	Kilbourne Road to CTH CW	Construct two lanes on new alignment
2020			CTH Y extension	STH 190 to CTH K	Construct four lanes on new alignment
2020			Johnson Road extension	A point about 2,000 feet south of STH 59 to Lincoln Avenue	Construct four lanes on new alignment
2020			Johnson Road extension	Coffee Road to CTH Y	Construct four lanes on new alignment
2020			Oconomowoc Parkway	STH 16 to CTH Z	Construct two lanes on new alignment
2020			Sunnyslope Road extension	CTH HH to CTH L	Construct two lanes on new alignment
2020			Waukesha west bypass	CTH X to Macarthur Road	Construct four lanes on new alignment
2020			124th Street extension	Watertown Plank Road to STH 59	Construct two lanes on new alignment

[a] *Transportation improvement project is included in the 2000-2002 Transportation Improvement Program.*

[b] *Transportation improvement project is included in the baseline transportation system.*

[c] *The initial segment of the USH 12 freeway between the City of Whitewater and the City of Elkhorn is anticipated to be the segment bypassing the City of Whitewater from existing USH 12 at approximately Howard Road southeast of the City to existing USH 12 at approximately Cold Spring Road northwest of the City. Initially, only two travel lanes are anticipated to be constructed and are anticipated to be open to traffic by the year 2007.*

[d] *Initial two lanes of four lane freeway proposed to be constructed and open to traffic by the year 2020.*

Table 12

COMPARISON OF FORECAST FUTURE AIR POLLUTANT EMISSIONS FROM THE TRANSPORTATION SYSTEM OF SOUTHEASTERN WISCONSIN SIX COUNTY SEVERE NON-ATTAINMENT AREA UNDER THE YEAR 2020 REGIONAL TRANSPORTATION SYSTEM PLAN AND YEAR 2000-2002 TRANSPORTATION IMPROVEMENT PROGRAM (TIP) TO THE AIR POLLUTANT TRANSPORTATION SYSTEM EMISSION BUDGETS UNDER THE STATE IMPLEMENTATION PLAN FOR AIR QUALITY (SIP)

	Six County Area[a]
	Volatile Organic Compounds[b] (Tons per Hot Summer Weekday) SIP Budget (58.13 tons – 1996 50.27 tons – 1999)
Forecast Year	Year 2020 Plan and 2000-2002 TIP Emissions Forecast
2001	43.38
2007	30.25
2010	23.89
2020	18.78

[a] *Kenosha, Milwaukee, Ozaukee, Racine, Washington, and Waukesha Counties.*

[b] *The emissions forecasts under the plan are pursuant to Federal regulations to also assume implementation of the 2000-2002 transportation improvement program, which has been prepared to continue implementation of the plan. Since the plan and program are entirely consistent with respect to "non-exempt" projects, or projects of air quality impact, including highway and transit capacity improvement and expansion, the emissions forecast attendant to the plan are basically the same as the plan and program combined.*

It should be noted also that the transportation plan forecasts have not been adjusted to assume implementation of the Partners for Clean Air program, which is included in the State implementation plan emissions forecasts for the six county area.

Source: Wisconsin Department of Natural Resources and SEWRPC.

2000-2002 transportation improvement program projects, that is, projects with air quality impacts, are included in the year 2020 plan. Also, the year 2000-2002 transportation improvement program includes all projects essential to implement the year 2020 plan on schedule. The satisfaction of these two tests have been demonstrated in Tables 10 and 11.

Conformity Determination Criteria--Contribution to Emission Reductions

The second test of transportation plan and program conformity is that the transportation plan and improvement program must contribute to emissions reductions (40CFR 93.119). With respect to the six county area, this emissions reductions test only applies to volatile organic compounds, as a nitrogen oxides conformity waiver is in effect in the six county area.

Within the six county area, this emissions reduction conformity criterion will be satisfied if, for the years 2001, 2007, 2010, and 2020, the emissions expected under the transportation system plan and program do not exceed the emissions expected under the existing and committed transportation system. The existing and the committed transportation system, which is referred to in the Federal regulations as the "baseline" system, is to include all existing transportation facilities and services and ongoing travel demand management and system management activities; the completion of all projects under construction, or undergoing active right-of-way acquisition; programmed (for final engineering, right-of-way acquisition, or construction) in the first two years of the last conforming transportation improvement program (the 1998 through 2000 program for Southeastern Wisconsin); or have completed the National Environment Policy Act process (record of decision). Those highway capacity improvement and expansion projects determined to be eligible for inclusion in the baseline case are identified in Tables 2 and 5 (see also Appendix B). Tables 2 and 5 also identify the projects in the transit and highway elements of the plan, respectively, in addition to the baseline projects, which are incorporated for each year--2001, 2007, 2010, and 2020--in the forecast of emissions attendant to the year 2020 transportation system plan, referred to as the "action" transportation system. Table 13 presents a comparison of transportation system volatile organic compound emissions within the six county area under the existing and committed, or "baseline," plan scenario and under the year 2020 transportation plan and 2000-2002 transportation improvement program, or "action," scenario. The analysis shows that for both the six-county severe nonattainment area for ozone of Kenosha, Milwaukee, Ozaukee, Racine, Washington, and Waukesha Counties, the transportation plan and program, or "action" scenario, may be expected to result in no increase in volatile organic compound emissions from those under the existing and committed system, or "baseline," plan scenario, for each year: 2001, 2007, 2010, and 2020. It also indicates that the transportation plan and program, or "action," scenario, results in a reduction in emissions from year 1990 estimated volatile organic compound emissions. Thus, this conformity criteria is "fully" met by the year 2020 regional transportation plan and 2000-2002 transportation improvement program.

* * *

Table 13

COMPARISON OF SIX COUNTY SEVERE OZONE NON-ATTAINMENT AREA TRANSPORTATION SYSTEM VOLATILE ORGANIC COMPOUND EMISSIONS UNDER BASELINE AND ACTION SCENARIOS WITH RESPECT TO YEAR 2020 TRANSPORTATION PLAN AND YEAR 2000-2002 TRANSPORTATION IMPROVEMENT PROGRAM: FORECAST 2001, 2007, 2010, AND 2020

	Six County Area[a]	
Year	Existing and Committed Transportation System: Baseline (tons per hot summer weekday)	2020 Transportation Plan and 2000-2002 Improvement Program:[b] Action (tons per hot summer weekday)
2001	43.39	43.38
2007	30.36	30.25
2010	23.91	23.89
2020	19.11	18.78

[a]*Estimated 1990 emissions are 147.22 tons.*

[b]*The emissions forecasts under the plan are pursuant to Federal regulations to also assume implementation of the 2000-2002 transportation improvement program, which has been prepared to continue implementation of the plan. Since the plan and program are entirely consistent with respect to "non-exempt" projects, or projects of air quality impact, including highway and transit capacity improvement and expansion, the emissions forecast attendant to the plan are basically the same as the plan and program combined.*

APPENDICES

(This page intentionally left blank)

APPENDIX A

CONFORMITY ANALYSIS OF THE 2000-2002 TRANSPORTATION IMPROVEMENT PROGRAM AND YEAR 2020 REGIONAL TRANSPORTATION PLAN

- Years For Analysis [Years For Which Projection Of Emission Will Be Made For The Regional Transportation Improvement Program (TIP)/Transportation Plan (RTP)]

    - Proposed years are 2001, 2007, 2010, and 2020. Emission projections will be based on official SEWRPC intermediate demographic and economic growth forecasts per short-term conformity process agreement.

- Emission Budget Tests for Conformity.

    - Six county area
        - Volatile Organic Compounds (VOC)-1996 State Implementation Plan (SIP) budget is 58.13 tons and 1999 budget is 50.27 tons per hot summer weekday.
        - Budget Test-2001, 2007, 2010, and 2020 TIP/RTP VOC emission forecasts must not exceed the above 1996 and 1999 budgets.

    - Walworth County
        - Year 2007 SIP budgets are 4.89 tons of VOC and 7.20 tons of nitrogen oxides per hot summer weekday.
        - Budget test – 2007, 2010, and 2020 TIP/RTP emission forecasts must not exceed the above 2007 budgets.

- Build-No Build Tests
    - Six county area
        - VOC emissions – TIP/RTP emissions must be less than no-build emissions in years 2001, 2007, 2010, and 2020.
    - Walworth County
        - No test

- The conformity analysis will include a comparison of the vehicle-miles of travel (VMT) projections in the SIP to current estimates of VMT in Southeastern Wisconsin based on actual traffic counts.

- Emission model will be Mobile 5A.

(This page intentionally left blank)

Appendix B

Appendix B is the list of projects constituting the transportation improvement program for the seven county Southeastern Wisconsin Region.

Table B-1: The TIP for the Milwaukee Transportation Management Area

Table B-2: The TIP for the Kenosha County, Racine County, And Walworth County Transportation Management Area

Within each table, projects are listed in order by implementing agency--The State of Wisconsin first, then the appropriate county in alphabetical order; and then by municipality in alphabetical order within county. The TIP projects of each implementing agency are arranged in order by the following project categories: highway preservation, highway improvement, highway expansion, transit preservation, transit improvement, transit expansion, highway safety, off-system highway improvement, and highway-related environmental enhancement.

An explanation of the abbreviations used in the Appendix follows:

Implementing Agency

"C/" represents "City of"
"V/" represents "Village of"
"T/" represents "Town of"

Source of Funds (federal and state fund codes)

BRF	Bridge Replacement Funds
CMAQ	Congestion Mitigation and Air Quality Improvement Funds
COMB	Combination of FHWA and FTA Funds
FAI(4R)	Federal Aid Interstate Funds
FTA 3037	FTA Section 3037 Funds—Job Access and Reverse Commute
FTA 5303	FTA Section 5303 Funds—Metropolitan Planning Program
FTA 5309	FTA Section 5309 Funds--Capital Program
FTA 5307	FTA Section 5307 Funds--Urban Formula Program
FTA 5310	FTA Section 5310 Funds--Elderly and Persons with Disabilities Program
FTA 5311	FTA Section 5311 Funds--Nonurban Area Formula Program
FTA 5311	FTA Section 5311 Funds--Nonurban Area Formula Program
FTA 5313/5314	FTA Section 5313/5314 Funds—State Planning and Resaerch Program
GCM	Gary, Chicago, Milwaukee Corridor Intelligent Transportation System Funds
IH-C/S	Interstate Highway - Completion or Substitution Funds
IH-M	Interstate Highway - Maintenance Funds
LRIP	Local Road Improvement Program
NHS	National Highway System Funds
OTHER FED	Federal funding programs not sponsored by FHWA or FTA (Economic Development Funds and Urban Development Action Grants are examples)
OTHER FHWA	FHWA funding program other than those listed (includes certain limited demonstration funds)
SIB	State Investment Bank Funds
STP-E	Surface Transportation Program - Enhancement Funds
STP-M	Surface Transportation Program - Milwaukee Urbanized Area Funds
STP-O	Surface Transportation Program - Other Funds (Rural, other urban and urbanized areas, discretionary)
STP-S	Surface Transportation Program - Safety Funds
TEA	Transportation Economic Assistance

Project No.

1	Project number for project in 2000-2002 TIP
(1)	1998-2000 TIP project number for project contained in 1998-2000 TIP

Project Description

CTH	County trunk highway
IH	Interstate highway
STH	State trunk highway
M or MI	Miles

Project Type

HP	Highway Preservation
HI	Highway Improvement
HE	Highway Expansion
TP	Transit Preservation
TI	Transit Improvement
TE	Transit Expansion
EE	Environmental Enhancement
HS	Highway Safety
OH	Off Arterial Highway System

G29 Approval	Review of a project under Gubernatorial Executive Order No. 29, which replaces the previous A-95 review process.
P	Review of the project could not be conducted at this time due to a lack of complete information, and the approval is pending a more detailed project description.
A	Review of the project has been completed, and the project is approved.

Cost

PE	Preliminary engineering
ROW	Right-of-way
CONST	Construction
OTHER	Purchase and/or installation of equipment

Air Quality Status

EXEMPT	Project implementation is exempt from air quality conformity assessment. Such projects are considered to have no impact on air quality.
NON-EXEMPT AIR QUALITY NEUTRAL	Project implementation requires air quality conformity assessment. However, project is considered to have a minimal impact on air quality and does not need to be included in a regional emissions analysis supporting an air quality conformity assessment.
NON-EXEMPT	Project implementation requires air quality conformity assessment. Project is considered to have an impact on air quality and must be included in a regional emissions analysis supporting an air quality conformity assessment.

Shading indicates year traffic counts taken. Milwaukee County an anomaly, with about one-third of county counted each year.
City of Milwaukee counts to state standards begun in 1993. HPMS revised in 1993.
Traffic counts for HPMS updated between actual count years by growth factors.
1994 VMT for Milwaukee and Waukesha counties probably low due to automation problems in getting count data to transfer between computer files correctly.
Estimates taken directly from HPMS master file, not adjusted to statewide control total.
Most important number for air quality purposes highlighted at bottom right.

APPENDIX D

U.S. DEPARTMENT OF TRANSPORTATION, FEDERAL HIGHWAY ADMINISTRATION
REPORT ON REVIEW OF TRAVEL MODELING AS CONDUCTED BY THE
SOUTHEASTERN WISCONSIN REGIONAL PLANNING COMMISSION
AND
COMMISSION MEMORANDUM ON TRAVEL MODELING
REQUIREMENTS FOR OZONE NON-ATTAINMENT AREAS

U.S. Department of Transportation

Federal Highway Administration

Memorandum

Subject: Report on Review of Travel Demand Forecasting Process in Milwaukee

Date: May 21, 1997

From: Director
Office of Planning & Program Development
Olympia Fields, Illinois

Reply to Attn. of: HPP-05

To: Mr. William K. Fung, Division Administrator
Madison, Wisconsin

Attached is the final version of the Washington Office's report on the process review performed on Milwaukee's conformity-related travel demand modeling process. Brian Gardner (HEP-20) performed the review with the collaboration of Samuel Herrera and Tom Frank.

The issuance of this report was delayed by travel and other work scheduling conflicts that Brian Gardner experienced after the site review date of December 18, 1996. However, a copy of the draft report was provided to the MPO, Southeastern Wisconsin Regional Planning Commission (SEWRPC) in March.

The report concludes that the Milwaukee MPO's travel demand forecasting process substantially meets the requirements of the Air Quality Conformity Rule, section 51.452(b). However, technical weaknesses were identified in the current procedures used for speed monitoring and for peak period speed estimation. Based on SEWRPC's input, the report recommends a May 1, 1997, date for designing the work scope, and a May 1, 1998, date for completing the planning work necessary to correct these deficiencies. Given that we are late in formally notifying the MPO of these recommendations, we concur with Tom Frank's suggestion that the transmittal letter to the MPO will not specify completion dates for the recommended model enhancements, but will emphasize that any model improvements that the MPO may be able to accomplish in the near term should be incorporated in the next conformity analysis of the TP, which is now scheduled for the Fall of 1997.

Administration

Subject: INFORMATION: Transmittal of Review of Conformity Related Travel Demand Procedures in the Milwaukee Area

Date: APR 25 1997

From: Chief, Metropolitan Planning Division

Reply to
Attn. of: HEP-20

To: Mr. Dale E. Wilken
Regional Administrator (HRA-05)
Olympia Fields, IL

The subject report is attached for your information and use. The review was initiated at the request of your staff, who also provided substantial input and guidance on the final report. I appreciate the contributions of Samuel Herrera-Diaz and Tom Frank in completing this team effort.

If you have questions or concerns regarding this report, please contact me or Brian Gardner (202) 366-4061 of my staff. I look forward to our continued collaboration.

Review of Conformity Related Travel Demand Procedures in the Milwaukee Area

Executive Summary

The purpose of this review was to examine the travel demand modeling issues specifically relating to conformity prior to updating the transportation plan. The scope of the review follows the current regulatory requirements: land-use and transportation interactions, speed monitoring, peak-period travel and speed estimation, adequacy of HPMS data in the conformity and model processes, consistency of travel speeds between sub-models, and consistency with the current SIP. Except for the speed monitoring and peak-period procedures, the travel demand procedures currently in place are adequate or better for meeting the conformity requirements.

The use of observed free flow speeds appears adequate. The MPO has maintained use of free flow speeds in its network databases for 35 years. The free flow network speeds are used in other planning programs to measure accessibility, for example, to parks and airports. However, documentation of the sampling method used to check and verify speeds is recommended. Support of the data collection method is needed in case of a challenge.

The adequacy of the peak period methodology could be questioned. To provide a peak period capability, the methods use a daily assignment and estimate peak hour speeds and volumes based upon the ratio of AWDT to average-weekday design capacity. The estimates are derived from relationships calibrated from existing and historic traffic volumes, congestion and speed data. Additional documentation of this somewhat unique method and its validation is recommended in case of a challenge.

The land use and transportation interactions are adequately captured within the long range transportation and land-use plans. Consistency between the two is formally provided for in the design and analysis of both plans. The agency is congratulated for its work in this regard.

Adequacy of the HPMS data in the conformity and model process is provided by the stated interchange of traffic and model data with the State and the regularity of the extensive traffic monitoring program in the region. This ensures that the HPMS estimates are current and consistent with the MPO estimates.

Consistency of travel speeds is adequate given that congested skims are used iteratively for the HBW purpose. The requirement is for consistency, not equilibrium, and the feedback and closure-checking technically meets the requirement. Additional technical information, provided separately, will allow consideration of methods with better closure behaviors. It is recommended that refinement of this model aspect be considered only if incorporating combined impedance into trip distribution is not feasible.

The Employee Commute Option was eliminated from the federal regulation and the State Department of Natural Resources withdrew this option from the current State Implementation Plan in May, 1996. No other transportation control measures are currently in force and this section of the requirement is not currently relevant.[1]

In summary the identified weaknesses in the current procedures are the speed monitoring procedures and the peak period speed estimation procedure based upon a daily assignment and estimated daily volume to design capacity ratios. The Southeastern Wisconsin Regional Planning Commission (SEWRPC) should develop and implement a work program to verify, and if needed, refine the free-flow arterial street and highway speeds in its existing arterial system network. The results of the verification should be documented in a memorandum report. The SEWRPC should also develop and implement a work program to validate its peak hour speed estimation procedure (which is based on the ratio of facility average weekday traffic volume to average weekday design capacity), and to review potential enhancements of this peak hour estimation procedure (including different speed estimation equations for freeways and surface arterials, and for different types of surface arterials). The results of this validation and review should be documented in a memorandum report. The work program design should be completed by May 1, 1997, and implemented by May 1, 1998. The SEWRPC's next transportation plan conformity is anticipated in Fall 1997. Any interim refinements completed by that time should be incorporated in that conformity analysis. Subsequent conformity analyses should use the results of the model validation and refinement to be conducted and completed by May 1, 1998.

Background

On December 18, 1996, a joint meeting was held to review the modeling practices used in the Milwaukee area. The purpose of the meeting was to foster cooperation in updating the air quality conformity analyses for the region. This session focused on the travel forecasting procedures. Present were representatives of the Southeastern Wisconsin Regional Planning Commission (SEWRPC), Wisconsin Department of Transportation, Wisconsin Department of Natural Resources, FHWA Division, FHWA Region, and FHWA Headquarters offices.

Synopsis of Analysis Procedures

Available Data: Three survey years, 1963, 1972 and 1991 along with census data are available[2]. Note that the survey tools were kept as consistent as possible to keep the survey results comparable. Land use data at the parcel level is also available within the agency. Traffic counts cover all highway facilities functionally classified as collectors and above in the metropolitan area, and are updated on a 3-year cycle. It was also noted in the meeting that free flow and peak hour travel time data are routinely used in other MPO planning programs, and collected for staff work-related trips in the region.

Land-Use Planning: The current method as described follows a traditional Delphi process involving the local governments in the area[3]. As discussed in the Long Range Plan and at the 12/18 meeting, transportation impacts are integrated into the land use plan design by using thematic maps showing regional accessibility changes derived from elements of the trip distribution model. Transportation impacts are also considered through explicit design standards[4]. While this approach is only as strong as the underlying Delphi method, the land use controls available to the region and the consensus approach used provide substantial reinforcements to the final design.

Travel Demand Forecasting: Current[2] and near term[5] methods use a traditional four step model chain. The regional transportation model is currently in its third generation. Standard practices for trip generation, trip distribution, and mode split are employed. An atypical approach is used for trip assignment.

Different daily person-trip production rates are estimated by purpose for each of the three distinct urban areas and one set of rates by purpose for all rural areas. Home-based work, shopping and other are cross classified by vehicle availability and household size. Home based school trips are estimated each for K-12 and university primarily through growth factored trip tables. Non-home based productions are estimated by subregion and allocated to zones by households, retail employees, and other employees. Truck and taxi trips are estimated from inventory data using linear regression. Person trip attraction rates are estimated by single variable regression and specified by subarea (ie central Milwaukee County vs. the remainder of Milwaukee County vs. remainder of the region).

Trip distribution uses a standard gravity model formula for allocating trips with peak hour travel times used for home based work trip distribution and free flow travel times used for home based shop and other and non home base trips. Home based trips and non-home based trips are allocated by both total highway trip time and highway trip out-of-pocket costs. Also for the East-West corridor study, zero car households were distributed separately. No K-factors are used

within the gravity model. Trucks, nonresident, and external trips are distributed using Fratar. During the 12/18 discussion, it was noted that home based work trips are distributed using peak hour travel time skims in a simple, iterative fashion.

Mode split uses a straightforward, multi-variate logit approach for allocating home-based work, other, shopping, college, and non-home based. Mode shares for transit, drive alone, and shared ride are estimated for home based work while only transit and highway shares are estimated for the remaining trip purposes.

Assignment uses a daily method with post-assignment link-based factors based upon the ratio of AWDT to daily capacity to estimate peak travel by direction for each highway link and trip-based factors to estimate transit demand by time period. The relationship between AWDT and daily capacity is also used to estimate peak hour speed and average daily speed.

Conclusions

Explicit documentation validating the free flow network speeds and use of daily volume-capacity ratios for estimating hourly speeds is needed. Highway speeds are a key element for demand forecasting and air quality assessment. As the current SEWRPC practices use a somewhat unique approach, additional information is needed to defend their validity if challenged. This is especially true since experience with hourly speed estimation using AADT/capacity based methods has been mixed for arterial facilities. If the speed estimation procedures are not readily defensible, it is recommended that the procedures be changed to reflect an hourly assignment using BPR, or a similar approach, with appropriately calibrated coefficients by facility type, good estimates of maximum service flow rates (ie LOS E capacity), and current estimates of link free flow speeds. This approach has been shown to provide reasonable estimates of travel speeds if current data are used. More accurate speed estimation techniques require additional traffic control and geometric data to be meaningful, but they should also be considered if these data are available. Note that moving to an hourly or peak period assignment has implications for the distribution and mode split models. At a minimum, this would require factoring trip tables before assignment to reflect peak period trip patterns.

For trip distribution, it is suggested that in the next model update a composite impedance based on modal utilities as the separation variable should be considered instead of highway travel times and costs. Given the mode share in the region, destination choice may be sensitive to transit service levels. The additional iteration should not be difficult as the current model stream is already iterated at least once for estimating HBW trip distribution. This approach would require recalibrating the friction factors for the trip purposes involved and revalidating the trip distribution model. Also, if the mode split model is scheduled to be updated in the future, examining composite impedance within trip distribution should be postponed until the mode split work is complete.

The data resources available to SEWRPC are extraordinary. The agency is congratulated for their monitoring work within the region. In addition to a stronger, more defensible, analytic planning process, the benefits of providing current, meaningful information to the jurisdictions and the public are immeasurable.

The current process effectively considers the transportation and land-use relationships using shared design goals and quantitative thematic mapping. An additional benefit is the consensus achieved within the region for supporting implementation of the land use plan. SEWRPC is one of the few agencies achieving both of these important goals and is again congratulated for their success in this regard.

TRAVEL MODELING REQUIREMENTS FOR SERIOUS, SEVERE, AND EXTREME OZONE NONATTAINMENT AREAS AND SERIOUS CARBON MONOXIDE AREAS

REQUIREMENT

1. A network-based transportation demand model according to procedures and methods that are available and in practice and supported by current and available documentation.

RESPONSE

The travel simulation models used to estimate travel and traffic for the regional transportation system plan and transportation improvement program and attendant air pollutant emissions, are network-based models which forecast travel demand and highway traffic and transit ridership volumes based upon forecasts of regional population and economic activity levels and characteristics, based upon planned regional land use patterns, and based upon the characteristics of the transportation system. The travel models are fully described in Chapter VII, "Travel Simulation Models," of SEWRPC Planning Report No. 41, A Regional Transportation System Plan for Southeastern Wisconsin: 2010.

Among the demographic and economic characteristics which are considered in the models are the number of households and jobs; the characteristics of the households, including household size, household income, household vehicle availability, and household residential density; and the characteristics of jobs including type of industry, such as retail and non-retail commercial and industrial.

The travel models forecast travel demand based upon the planned allocation of regional growth and change in population, households, and jobs to 10,800 U. S. Public Land Survey System quarter-sections and approximately 1,400 traffic analysis zones. The former have areas of about 160 acres; the latter ranges in size down to six acres. The regional land use plan and alternative regional growth scenarios are fully described in SEWRPC Planning Report No. 40, A Regional Land Use Plan for Southeastern Wisconsin: 2010.

The transportation network incorporated in the models includes the entire over 3,600-mile arterial street system of the region. This arterial system comprises about one-third of the total street system within the Region, and includes all Federal and State functionally classified arterials within the urban areas and all arterials and major collectors within the rural areas of the Region. The transportation network also includes the entire public transit system, including the local, express, and rapid transit system components.

The regional transportation system plan and improvement program thus include all proposed additions to transportation system capacity within the Region, including with respect to arterial streets and highways, all widenings to provide additional traffic lanes; all conversions of non-arterial facilities to arterials; and all construction of new arterial facilities. With respect to the transit system, the plan and program includes all new routes and service frequency changes. Thus, the transportation system plan, the simulation of the performance of that plan and the implementing improvement program all go well beyond the Federally required consideration of Federally defined regionally significant projects, that is principal arterials and transit fixed guideway facilities.

The battery of Commission travel and traffic simulation models were calibrated with 1991 large-scale travel survey data, 1991 transportation system inventory data, 1990 U. S. Bureau of Census data, and 1990 land use inventory data, and represent state-of-the-art professional practice. The model structure and calibration were approved by the Commission Technical and Intergovernmental Coordinating and Advisory Committee on Regional Transportation System Planning, which Committee includes representation from Federal, State, and local governments. The models were approved for use in a Federal Transit Administration transit fixed-guideway alternatives analysis, and are also documented in a methods report prepared for the east-west corridor transit study, entitled Travel Simulation Models for the East-West Corridor Transit Study. It should be noted that the first generation of the Commission travel and traffic simulation models were developed in 1963 and were validated and recalibrated and refined as necessary in 1972 and 1992 utilizing three generations of Commission large scale travel survey data as well as census and land use data.

REQUIREMENT

(i) Network-based model(s) must be validated against observed counts for a base year that is not more than 10 years prior to the date of the conformity determination. Model forecasts must be analyzed for reasonableness and compared to historic trends.

RESPONSE

As already noted, Commission travel and traffic simulation models were extensively and intensively calibrated and recalibrated, validated, and refined as necessary over a period of more than 30 years. The latest travel model validation was completed for the years 1990 and 1991 using 1990 U. S. Bureau of Census data, 1990 land use inventory data, 1991 travel survey data, and 1990 and 1991 transportation system inventory data. The model validation included comparisons of observed and model-estimated trip generation, trip distribution, transit ridership, and arterial street and highway traffic volume. The model validation is documented in Chapter VII, "Travel Simulation Models," of SEWRPC Planning Report No. 41, A Regional Transportation Plan for Southeastern Wisconsin: 2010.

REQUIREMENT

(ii) Land use, population, employment and other network-based travel model assumptions must be documented, and based on best available information.

RESPONSE

Among the demographic and economic characteristics which are considered in the models are the number of households and jobs; the characteristics of the households, including household size, household income, household vehicle availability, and household residential density; and the characteristics of jobs including type of industry, such as retail and non-retail commercial and industrial.

The travel models forecast travel demand based upon the planned allocation of regional growth and change in population, households, and jobs to 10,800 U. S. Public Land Survey System quarter-sections and approximately 1,400 traffic analysis zones. The former have areas of about 160 acres; the latter ranges in size down to six acres.

The transportation network incorporated in the models includes the entire over 3,600-mile arterial street system of the region. This arterial system comprises about one-third of the total street system within the Region, and includes all Federal and State functionally classified arterials within the urban areas and all arterials and major collectors within the rural areas of the Region. The transportation network also includes the entire public transit system, including the local, express, and rapid transit system components.

The regional transportation system plan and improvement program thus include all proposed additions to transportation system capacity within the Region, including with respect to arterial streets and highways, all widenings to provide additional traffic lanes; all conversions of non-arterial facilities to arterials; and all construction of new arterial facilities. With respect to the transit system, the plan and program includes all new routes and service frequency changes. Thus, the transportation system plan, the simulation of the performance of that plan and the implementing improvement program all go well beyond the Federally defined regionally significant projects, that is, principal arterials and transit fixed guideway facilities.

SEWRPC Planning Report No. 45, A Regional Land Use Plan for Southeastern Wisconsin: 2020 and SEWRPC Planning Report No. 46, A Regional Transportation System Plan for Southeastern Wisconsin: 2020 provide documentation of the travel model assumptions.

(iii) Scenarios of land development and use must be consistent with the future transportation alternatives.

RESPONSE

Land use and transportation system planning have been carried on in Southeastern Wisconsin in a fully integrated fashion for over 30 years. The consistency of the transportation system plan and underlying land use plan is directly established, tested, and documented. First, the transportation system plan is designed to serve the regional land use plan, which is an agreed upon desirable pattern of future land use and not a project pattern of likely future land use. The regional land use plan has been adopted by all seven counties of Southeastern Wisconsin, as well as by many of the major cities, including the City of Milwaukee, as the desirable pattern of future land use. The transportation system plan includes only such arterial street and highway transit improvements which address existing travel needs and demands and those probable future needs and demands which are generated by the regional land use plan.

Second, to test this consistency of the regional land use and transportation system plans, all transportation improvements are mapped and compared to areas of existing and planned development under the land use plan, and areas which are to be protected under the plan from development. The Commission's Advisory Committee on Regional Transportation System Planning concluded that this test established a consistency between the regional transportation system plan and underlying land use plan.

Third, an additional test of the consistency of the regional land use and transportation system plans was the preparation of estimates of the future level of accessibility provided by the transportation system plan to each subarea of the Region, as defined by traffic analysis zones. The total level of accessibility provided by the transportation system plan, and, as well, the incremental level of accessibility compared to a "no build" transportation system plan was compared to areas of existing and planned development under the regional land use plan, and areas under the plan which are to be protected from development. The Commission's Advisory Committee on Regional Transportation System Planning concluded that this comparison established that the transportation system plan was consistent with the regional land use plan as it

provided higher levels of accessibility to areas planned for urban development, and lower levels of accessibility to areas planned to be protected from such development.

REQUIREMENT

(iv) A capacity sensitive assignment methodology must be used, and emissions estimates must differentiate between peak and off-peak link volumes and speeds and use speeds based on final assigned volumes.

RESPONSE

The Commission travel and traffic simulation models incorporate sensitivity to peak hour traffic congestion and travel time through a capacity restrained average weekday traffic assignment. Based upon the average weekday capacity restrained assignment, estimates of peak hour traffic speeds and volumes are prepared. The peak hour volumes and speeds are related to the total weekday travel volume and design capacity on the facility, and incorporate the potential for the spreading of total weekday traffic to hours of the day adjacent to the peak hour.

The capacity constrained peak hour, and free flow or off-peak, travel speeds are incorporated in, estimated by, and are available from the Commission models. The models estimate peak hour and off-peak travel times and utilize the peak hour travel times in trip distribution and modal choice of peak travel (work and school travel). Off-peak travel times are used in trip distribution and mode choice for off-peak travel (shopping and other travel).

REQUIREMENT

(v) Zone-to-zone travel impedances used to distribute trips between origin and destination pairs must be in reasonable agreement with the travel times which result from final assigned traffic volumes. Where use of transit currently is anticipated to be a significant factor in satisfying transportation demand, these times should also be used for modeling mode splits.

RESPONSE

The Commission travel and traffic and simulation modeling is conducted in the classic four step procedure, beginning with trip generation, and followed in order by trip distribution, mode choice, and traffic assignment. Zone-to-zone highway travel times and costs are used in the modeling of trip distribution, and zone-to-zone highway travel times and transit travel times are used in the modeling of mode choice. The final modeling step of traffic and transit assignment establishes the final estimated highway and transit travel times for each land use-transportation alternative. It is standard Commission practice to re-estimate trip distribution and mode choice with traffic and transit assignment-estimated travel times until the travel times used to estimate trip distribution and mode choice are in agreement with those estimated in traffic and transit assignment.

REQUIREMENT

(vi) Network based travel models must be reasonably sensitive to changes in the times, costs, and other factors affecting travel choices.

RESPONSE

The Commission mode choice model estimates mode choice in part based upon the travel times and out-of-pocket costs of both public transit and automobile travel. The Commission trip distribution model estimates trip distribution based upon travel time and travel costs.

REQUIREMENT

2. Reasonable methods in accordance with good practice must be used to estimate traffic speeds and delays in a manner that is sensitive to the estimated volume of travel on each roadway segment represented in the network-based travel model.

RESPONSE

For use in capacity restrained traffic assignment, as well as in trip distribution and mode choice, the Commission simulation models estimate traffic speeds sensitive to the forecast traffic volume on each roadway segment for both peak hour and average 24-hour conditions, the latter based upon the proportion of traffic travelling under peak-hour and congested conditions and the proportion of traffic travelling under off-peak conditions. The estimated peak hour congested traffic speeds are calculated on the basis of a model calibrated using inventoried speeds and congestion which relates reductions in peak hour speed to the ratio of total average weekday traffic volume to estimated total design capacity. The model was calibrated and validated through comparison of model-estimated peak hour speeds to actual arterial street and highway segment peak hour operating speeds.

REQUIREMENT

3. Highway Performance Monitoring System (HPMS) estimates of vehicle miles traveled shall be considered the primary measure of vehicle miles traveled within the portion of the Nonattainment or maintenance area for the functional classes of roadways included in HPMS for urban areas which are sampled on a separate urban area basis. A factor (or factors) may be developed to reconcile and calibrate the network-based model estimates of vehicle miles traveled in the base year of its validation to the HPMS estimates for the same period. These factors shall be applied to model estimates of future vehicle miles traveled. In this factoring process, consideration will be given to differences between HPMS and network-based travel.

RESPONSE

The vehicle-miles of travel estimated by the Commission travel simulation models in the base year of its validation have been compared to estimates prepared for the State Implementation Plan with Highway Performance Monitoring System estimates, and it has been determined that the model estimate is consistent with the inventory estimate, being within 1 percent.

Southeastern Wisconsin Regional Planning Commission

STAFF MEMORANDUM

REVIEW OF TRAVEL SIMULATION MODEL ARTERIAL STREET AND HIGHWAY ESTIMATED FREE-FLOW TRAVEL SPEEDS AND PROCEDURES TO FORECAST ARTERIAL STREET AND HIGHWAY PEAK HOUR TRAVEL SPEEDS

INTRODUCTION

This memorandum documents the findings of an evaluation of the estimated arterial street and highway free flow travel speeds used in the Southeastern Wisconsin Regional Planning Commission travel simulation models, and of the procedures used to forecast arterial street and highway peak hour travel speeds used in those models. The evaluation of free flow travel speeds is documented in the first section of this memorandum. The findings of the evaluation of the procedures used to forecast arterial street and highway peak hour travel speeds are documented in the second section of this memorandum.

REVIEW OF SIMULATION MODEL FREE FLOW TRAVEL SPEEDS

The Commission travel simulation model includes for each segment of arterial street and highway an estimate of the average travel speed which may be expected to be experienced during free flow travel conditions. Free flow travel conditions are defined as those conditions under which traffic volume does not affect, and thereby reduce, travel speed. Typically, all arterial street and highway segments experience free flow travel conditions during non-peak travel hours. When traffic volumes exceed arterial facility design capacity, free flow conditions no longer exist, and travel speeds may be expected to be affected. The Commission has maintained the use of free flow travel speeds in its travel simulation models since the original development of these models in 1963. The free flow travel speeds incorporated in the models are utilized by the Commission in transportation and other planning efforts to document accessibility to, for example, such major land uses as, among others, shopping centers, industrial concentrations, airports, major parks, and major institutions. The travel times are reviewed during each use in facility planning and plan implementation efforts, and also at the initiation of major regional transportation system plan re-evaluations and updates. Past reviews and evaluations have consisted of

comparing estimates used in the travel simulation models to actual measured travel times through review of isochronal lines from selected locations throughout Southeastern Wisconsin.

This review and evaluation of the arterial street and highway estimated free flow travel speeds used in the travel simulation model was conducted by comparing model and survey estimated travel speeds and times by street segment. Specifically, the estimated travel speeds and travel times on selected segments of the arterial street and highway as currently incorporated in the highway network travel simulation model were compared to travel survey measured free flow travel speeds and travel times on those segments of arterial street and highway. The travel survey measured travel speeds and times were obtained using a floating car technique, wherein the observed travel time is measured by attempting to approximate the actual speed of traffic flow by passing as many vehicles as pass the survey vehicle. All free flow travel speed measurements were taken during non-peak travel hours.

Approximately 22 percent of the arterial streets and highways within Southeastern Wisconsin were selected for review and evaluation of the estimated free flow travel speeds and times, or nearly 700 miles of the 3,277 miles of existing arterial streets and highways within the seven county planning region. The arterial facilities for which model free flow travel speeds were evaluated are shown on Maps 1 though 7, and are listed in Table 1. Table 1 presents for each surveyed arterial street and highway segment a comparison of travel model estimated and travel survey measured free flow travel times and travel speeds. Figures 1 and 2 compare the travel model estimated and travel survey measured free flow travel times and speeds, respectively. This comparison indicates that the free flow travel times and speeds incorporated in the Commission travel simulation models accurately represent actual free flow travel speeds experienced on the arterial street and highway system of Southeastern Wisconsin. The modest differences observed between travel model estimated and travel survey measured free flow travel times and travel speeds were analyzed by Commission staff and incorporated as necessary into the travel simulation model estimate of free flow travel speeds.

The Commission staff plans to routinely review the free flow travel speeds incorporated in the travel simulation models. These reviews are to be conducted during the recalibration of the Commission travel simulation models which occurs about every 10 years following the conduct of the new U. S. Census and of a new major regional travel inventory. The next such review would be expected following the year 2000 Census, and would be conducted most likely in 2001. Commission staff would again compare

travel model estimates of free flow speeds and travel times to actual travel survey measurements. Approximately 25 percent of the arterial street and highway network would be selected for such analysis.

REVIEW OF PROCEDURES TO FORECAST ARTERIAL STREET AND HIGHWAY PEAK HOUR TRAVEL SPEEDS AND TRAVEL TIMES

The Commission travel simulation models include a model which estimates arterial street and highway travel time and speed during the peak traffic hours under congested conditions. The model forecasts the peak hour travel time and speed based upon the arterial street and highway's ratio of 24-hour traffic volume to its estimated 24-hour design capacity. This procedure has been utilized in the Commission travel simulation model for nearly 20 years and was initially calibrated and validated based upon measurements of actual peak hour travel time on congested arterial street and highway segments.

This review of this procedure validates this procedure for its continued use in the Commission travel simulation models. The review considered whether the model relationship between 24-hour volume to design capacity ratio and peak hour travel speed was still valid, and whether different relationships between the 24-hour volume to design capacity ratio and peak hour travel times and speeds exist for different types of arterial facilities, including freeways, urban two-lane and multi-lane facilities, and rural arterial facilities. To conduct this review the Commission staff identified segments of existing congested arterial facilities within southeastern Wisconsin, that is, arterial facilities carrying existing traffic volumes exceeding their design capacities. These facilities included segments of freeway facilities, urban two-lane and multi-lane facilities, and rural two-lane facilities. Travel time and speed measurements were conducted on these selected facilities during other than peak hour conditions to measure actual free flow conditions, and also during peak traffic hours to represent peak hour travel times and speeds. Twenty-four hour traffic volumes were obtained principally from traffic counts conducted by the Wisconsin Department of Transportation. The arterial facilities selected for this travel simulation model review are shown on Table 2 along with their ratio of estimated existing 24 hour average weekday traffic volume to design capacity and their ratio of travel survey measured peak hour travel time to free flow travel time. Figure 3 compares the model estimate of the ratio of peak hour travel time to free flow travel time to the actual travel survey measured peak hour travel time. The review of the model indicates that the model

Source: SEWRPC

predicting peak hour travel time, based upon 24-hour volume to design capacity ratio, continues to be, and is valid for all types of arterial facility.

The Commission staff will routinely review this peak hour travel simulation model travel time estimation procedure. This will occur when the Commission routinely conducts its review and recalibration of travel simulation models following the conduct of each new U.S. Census and major travel inventory. The next time that this would be conducted would be expected in the year 2001.

SUMMARY AND CONCLUSION

A review was conducted of the arterial street and highway estimated free flow travel speeds and procedures to forecast arterial street and highway peak hour travel speeds as incorporated in the Commission travel simulation models. With respect to model estimated free-flow travel speeds, the model estimated free flow travel speeds were compared to travel survey measured free-flow travel speeds on approximately 700 miles of arterial streets and highways within southeastern Wisconsin. This review and comparison indicated that the model estimated free-flow travel speeds and travel times accurately represent actual free flow travel speeds and travel times within southeastern Wisconsin. Only minor modification of model estimated travel speeds was necessary based upon this review and comparison. The Commission staff will routinely review free flow speed as part of its review and recalibration of travel simulation models which are conducted following each U.S. Census and major travel inventory.

A review was also conducted of the travel simulation model procedure which forecasts arterial street and highway peak hour travel speeds based upon the ratio of 24-hour traffic volume to design capacity. The results of this review indicated that this model procedure continues to be valid and accurately predicts peak hour travel speeds for all types of arterial facilities, including freeways, urban two-lane, urban multi-lane, and rural two-lane arterial facilities. This model also will be reviewed whenever the Commission conducts a major review and recalibration of its travel simulation models.

Mr. Charles H. Thompson
Secretary, Executive Division
Wisconsin Department of Transportation
P.O. Box 7910
Madison, WI 53707-7910

Subject: Conformity of the Southeastern Wisconsin Regional Planning Commission 2020 Regional Transportation Systems Plan and the 2000-2002 Transportation Improvement Program with the Wisconsin State Implementation Plan

Dear Mr. Thompson:

The Federal Transit Administration and Federal Highway Administration have jointly reviewed the Southeastern Wisconsin Regional Planning Commission (SEWRPC) 2020 Regional Transportation Systems Plan (RTP) and the 2000-2002 Transportation Improvement Program (TIP) and accompanying air quality conformity analysis for the six severe ozone nonattainment counties in the Southeastern Wisconsin metropolitan planning area. Our review compared the RTP and TIP with the requirements of the 1991 Intermodal Surface Transportation Efficiency Act (ISTEA), the Transportation Equity Act for the 21st Century (TEA-21), the 1990 Clean Air Act Amendments (CAAA), and their related implementing regulations. The air quality conformity portion of our review was coordinated with the U.S. Environmental Protection Agency (EPA), the Wisconsin Department of Transportation (WisDOT), and the Wisconsin Department of Natural Resources (WisDNR). Please refer to the enclosed March 15, 2000 letter from the EPA for evidence of this coordination.

We jointly find the 2020 RTP and 2000-2002 TIP for the six county metropolitan planning area in southeastern Wisconsin to be in conformance with the transportation related requirements of ISTEA, TEA-21, CAAA, and related regulations including those for determining conformity with the Wisconsin State Air Quality Implementation Plan (SIP). We hereby jointly find the RTP and TIP for the six county severe ozone nonattainment metropolitan planning area to be in conformity with the SIP as required in 40 CFR Part 93 as amended. With this determination and our joint air quality conformity finding, the corresponding projects in the SEWRPC 2000-2002 TIP can be incorporated into the WisDOT 2000-2002 Statewide Transportation Improvement Program (STIP).

This conformity finding is valid for a period of three years. A new air quality conformity determination will be required if either the RTP or TIP are modified by adding, removing and/or changing the implementation schedule of a nonexempt project, or if [illegible] triggering events specified in 40 CFR 93.104(c) occur.

As outlined in SEWRPC's March 10, 2000 memorandum amending their conformity analysis, a separate revised conformity analysis will be submitted at a later date for the Walworth County ozone maintenance area. Until a conformity determination is made on that submittal, only Walworth County projects included in or amended to the SEWRPC 1998-2000 TIP may be advanced.

Sincerely yours,

Dwight E. McComb

REPLY TO THE ATTENTION OF:

MAR 15 2000 (AR-18J)

William K. Fung, Regional Administrator
Federal Highway Administration
Wisconsin Division
567 D'Onofrio Drive
Madison, Wisconsin 53719

Dear Mr. Fung:

The United States Environmental Protection Agency (USEPA) has completed its review of the conformity determination for the 2000-2002 Transportation Improvement Program (TIP) and 2020 Regional Transportation Plan (Plan) for the Milwaukee severe ozone nonattainment area. The Plan was prepared by the Southeastern Wisconsin Regional Planning Commission (SEWRPC). This letter provides the results of our review of the conformity determination.

The Milwaukee severe ozone nonattainment area is operating under the control strategy period for the 9 percent Rate-of-Progress (ROP) plan. The ROP plan established an emissions budget for Volatile Organic Compounds (VOC) for 1999. The regional analysis for the Milwaukee area must satisfy the budget test with the ROP plan, an Action/Baseline test, and a demonstration that the Action Scenario achieves emissions reductions from 1990 mobile source emissions levels. The Milwaukee area has no requirement to assess conformity for Oxides of Nitrogen (NOx) because the area currently has a NOx waiver and no emissions budget for NOx.

The Wisconsin Department of Natural Resources (WDNR) provided SEWRPC with emissions factors (EF) generated by USEPA's EF model MOBILE5a for the regional analysis for VOC for the years 2001, 2007 (Milwaukee's attainment year), 2010 and 2020 (the horizon year of the Plan). These EF are consistent with the EF used in the ROP. The conformity analysis for the Milwaukee ozone nonattainment area demonstrated consistency with the ROP VOC budget, a net reduction in VOC in the Action/Baseline test, and the Action Scenario emissions were less than 1990 levels.

In summary, the SEWRPC 2000-2002 TIP and 2020 RTP conformity determination meets the requirements of the conformity regulations. The USEPA recommends that it be found to conform.

If you have any questions, feel free to contact Michael Leslie, of my staff, at (312) 353-6680.

Sincerely yours,

Stephen Rothblatt, Chief
Air Programs Branch

Federal Highway Administration

APPENDIX F

COMPARISON OF SIX COUNTY SEVERE OZONE NON-ATTAINMENT AREA TRANSPORTATION SYSTEM NITROGEN OXIDE EMISSIONS UNDER BASELINE AND ACTION SCENARIOS WITH RESPECT TO YEAR 2020 TRANSPORTATION PLAN AND YEAR 2000-2002 TRANSPORTATION IMPROVEMENT PROGRAM: FORECAST 2001, 2007, 2010, AND 2020

	Six County Area [a]	
Year	Existing and Committed Transportation System: Baseline (tons per hot summer weekday)	2020 Transportation Plan and 2000-2002 Improvement Program [b] :Action (tons per hot summer weekday)
2001	105.90	105.88
2007	83.58	83.57
2010	67.90	67.84
2020	46.63	45.65

[a] *Estimated 1990 emissions are 111.98 tons.*

[b] *The emissions forecasts under the plan are pursuant to Federal regulations to also assume implementation of the 2000-2002 transportation improvement program, which has been prepared to continue implementation of the plan. Since the plan and program are entirely consistent with respect to "non-exempt" projects, or projects of air quality impact, including highway and transit capacity improvement and expansion, the emissions forecast attendant to the plan are basically the same as the plan and program combined.*
