INTRODUCTION

This report is intended to provide the basis for a determination that the year 2035 regional transportation plan and also the year 2009-2012 transportation improvement program are in conformance with the eight-hour ozone standard and redesignation and maintenance State of Wisconsin Implementation Plan for Air Quality for the eight-hour ozone standard submitted to the U.S. Environmental Protection Agency by the Wisconsin Department of Natural Resources in September 2009, and that the plan and TIP are in conformance with the PM_{2.5} standard and interim emission analyses described in 40 CFR 93.119. The report is also intended to demonstrate that the year 2009-2012 Transportation Improvement Program continues to serve to implement the regional transportation plan.¹

This finding of conformity is for the eight hour standard for the six-county (moderate) nonattainment area for eight hour ozone standards within Southeastern Wisconsin, consisting of Kenosha, Milwaukee, Ozaukee, Racine, Washington, and Waukesha Counties, and the for the three-county nonattainment area for the fine particulate (PM_{2.5}) standard within Southeastern Wisconsin consisting of Milwaukee, Racine, and Waukesha Counties.

An initial stage of the Federally required State Implementation Plan for the one hour ozone standard was submitted to the Federal government by the WDNR in November 1993. That plan implements a set of actions required to achieve a 15 percent reduction in volatile organic compound emissions from 1990 to 1996. The plan included a 1996 budget for mobile source emissions in Southeastern Wisconsin. The USEPA approved Wisconsin's 15 percent plan in March 1996.

A maintenance plan for air quality under the one hour ozone standard was submitted for Walworth County by WDNR on December 15, 1995, and was approved by USEPA on August 26, 1996. The maintenance plan establishes year 2007 volatile organic compound and nitrogen oxides mobile source emissions budgets for Walworth County, as part of the State Implementation Plan for Air Quality. The WDNR requested a revision of the volatile organic compound emissions budget for transportation on September 8, 2000, to allocate 0.5 tons of volatile organic compound emissions from the safety margin to the year 2007 motor vehicle emissions budget, and this revised emissions budget and maintenance plan were approved by the USEPA, and made effective on December 26, 2000.

The 1990 Clean Air Act Amendments originally required Wisconsin to submit an attainment demonstration State Implementation Plan for the six county severe ozone nonattainment area for the year 2007 under the

¹The regional transportation plan is documented in SEWRPC Planning Report No. 49, A Regional Transportation System Plan for Southeastern Wisconsin: 2035 and SEWRPC Memorandum entitled Review, Update, and Reaffirmation of the Year 2035 Regional Transportation Plan. The 2009-2012 Transportation Improvement Program is documented in a report entitled, A Transportation Improvement Program for Southeastern Wisconsin: 2009-2012.

one hour ozone standard by November of 1994. In recognition of the effect that the long range transport of ozone has on the air quality in the Lake Michigan region and other ozone nonattainment areas, the USEPA issued a Guidance Memorandum on March 2, 1995. The memorandum indicated that the attainment demonstration State Implementation Plan would require nonattainment areas such as Southeastern Wisconsin to commit to Phase I and Phase II activities. Phase I required Wisconsin to commit to a long range ozone transport study with a multi-state Ozone Transport Assessment Group (OTAG) and to continue to make Rate of Progress (ROP) reductions in ozone emissions at the rate of 3 percent per year. Phase II requires Wisconsin to develop a year 2007 attainment demonstration plan based on the results of the OTAG study when completed.

Wisconsin Department of Natural Resources, Bureau of Air Management staff were actively involved in the study of long range ozone transport with the OTAG. Wisconsin submitted on December 11, 1997, to the USEPA a nine percent Rate-of-Progress Plan which provided for 3 percent per year ozone emission reductions through 1999. The USEPA approved this plan on November 3, 1999, including a 1999 mobile source emissions budget for volatile organic compounds. The WDNR also submitted in February 2000 an initial phase of an ozone attainment demonstration under the one hour ozone standard including state implementation plan transportation conformity budgets for volatile organic compounds and nitrogen oxides for the year 2007. The WDNR submitted the attainment plan for ozone under the one hour ozone standard for the six county southeastern Wisconsin severe ozone nonattainment area to USEPA in December 2000, and this attainment plan with conformity budgets for the years 2002, 2005, and 2007 was approved by USEPA in August, 2001. The WDNR submitted in January 2003 for the six county southeastern Wisconsin severe ozone nonattainment area state implementation plan transportation conformity budgets under the one hour ozone standard for volatile organic compounds and nitrogen oxides based on USEPA's new transportation mobile source emission model, MOBILE6. On July 28, 2008, the WDNR submitted to the USEPA a request that USEPA find that the six county severe ozone nonattainment area attained the revoked one hour ozone standard which the USEPA approved on April 24, 2009.

The WDNR submitted in September 2009 an attainment demonstration and maintenance plan for air quality under the eight-hour ozone standard for the six-county (moderate) ozone nonattainment area within southeastern Wisconsin which establishes budgets for volatile organic compounds and nitrogen oxides for the years 2012 and 2020. These budgets were determined to be adequate for transportation conformity on April 7, 2010

The USEPA and U. S. Department of Transportation have established criteria and procedures to be used by a Metropolitan Planning Organization (MPO) in making conformity determinations of regional transportation system plans and transportation improvement programs. The Southeastern Wisconsin Regional Planning Commission is the gubernatorially designated Federal MPO for the Kenosha, Milwaukee, Racine, and Round Lake Beach urbanized areas. The conformity criteria established by the USEPA were set forth in the November 24, 1993, Federal Register (40CFR Part 51), and criteria with respect to both volatile organic compounds and nitrogen oxides apply to Southeastern Wisconsin. Amendments to those conformity criteria were established by the USEPA in the August 29, 1993; November 14, 1995; August 15, 1997; and July 1, 2004; January 24, 2008, Federal Register. The last amendment addressed the criteria to be applied for the eight hour ozone standard. These Federal regulations identify the conformity criteria which should be applied at this time with respect to the six county ozone nonattainment area (moderate eight hour) and three county PM_{2.5} nonattainment area. Interim transportation conformity guidance for PM_{2.5} nonattainment areas was published in November 2009, and on March 24, 2010 the USEPA promulgated amendments to the conformity regulation regarding PM_{2.5} conformity determination criteria. The Commission, the WDNR, and the Wisconsin Department of Transportation have adopted a memorandum of agreement regarding the conduct of transportation plan and program conformity determinations, which has been approved by the USEPA.

Appendix A provides a summary of the interagency agreement on the conformity criteria and tests which should be applied in this conformity determination. The principal agencies involved were the Southeastern Wisconsin Regional Planning Commission, Wisconsin Department of Transportation, Wisconsin Department of Natural Resources, U. S. Department of Transportation, Federal Highway Administration and Federal Transit Administration, and U. S. Environmental Protection Agency. The conformity criteria to be applied to the six county area under the eight hour ozone standard with respect to volatile organic compounds and nitrogen oxides require the satisfaction of emission budget tests.

The next section of this report describes the year 2035 regional transportation system plan for the seven-county Southeastern Wisconsin Region. The following section describes the 2009-2012 transportation improvement program which implements the plan. The remaining sections of this report then identify the specific conformity procedure requirements and conformity determination criteria which have been established by the USEPA for use in the determination of transportation system plan and improvement program conformity. These sections also indicate the extent to which the conformity analysis, regional transportation plan, and the transportation improvement program meet each of these requirements and criteria. The assessment of conformity with respect to each requirement and criterion concludes that the regional transportation system plan and the 2009-2012 transportation improvement program are in conformance with the attainment and maintenance State Implementation Plan for Air Quality in the six county moderate ozone nonattainment area submitted to USEPA in September 2009.

It is important to note that the regional transportation system plan for Southeastern Wisconsin and the State Implementation Plan for Air Quality, and the transportation improvement program, have been prepared in a cooperative manner by the Regional Planning Commission and the WDNR. The preparation of the two plans has been extensively coordinated. The forecasts of vehicle-miles of travel and air pollutant emissions utilized in the preparation of the regional transportation system plan were based on the official Commission intermediate growth forecasts for the year 2035, and the forecasts of emissions under the ozone redesignation and maintenance State Implementation Plan were based on alternative high growth vehicle miles of travel and emissions forecasts under the year 2035 regional transportation plan, and increased by 7.5 percent to account for uncertainty in transportation emissions forecasts. The emission factors which the Commission utilized to estimate the air pollutant emissions under the regional transportation system plan and transportation improvement program, and in the preparation of this conformity determination of the transportation plan and program were provided by the Wisconsin Department of Natural Resources and for this conformity analysis include the emission reduction benefits attendant to Tier 2 motor vehicle and low sulfur fuel regulations. The emission factors which were used to establish the transportation emission budgets in the Ozone Attainment Demonstration element of the State Implementation Plan also did account for the emission reduction benefits attendant to these more recent regulations. In addition, the Wisconsin Department of Natural Resources has relied upon the regional transportation system plan for the identification and evaluation of transportation control measures considered for incorporation into the State Implementation Plan.

REGIONAL TRANSPORTATION SYSTEM PLAN FOR SOUTHEASTERN WISCONSIN

The design year 2035 regional transportation system plan is documented in the Southeastern Wisconsin Regional Planning Commission Planning Report No. 49, *A Regional Transportation System Plan for Southeastern Wisconsin: 2035*, and SEWRPC Memorandum, *Review, Update, and Reaffirmation of the Year 2035 Regional Transportation Plan*. The regional transportation system plan is based upon a regional land use plan, which seeks to preserve and enhance the environment within the Region, including the

containment of urban sprawl, the preservation of environmental corridors, and the preservation of prime agricultural lands.

The regional transportation system plan has been developed to meet the requirements of a Federally defined congestion management system, including the definition of performance measures to establish congestion problems and to assist in the evaluation of alternative measures to address congestion and the evaluation and recommendation of alternative measures to resolve the identified congestion problems. The development and evaluation of transportation alternatives which would address existing and anticipated future traffic congestion problems was done in a disciplined way so as to ensure that highway capacity expansion projects were proposed for inclusion in the plan only as a last resort. Appropriate, detailed, quantified attention was paid to determining the extent to which a wide variety of transportation system management measures, including land use, traffic management, and transit, could be used to resolve congestion problems. Once that extent was determined, highway capacity improvement proposals were placed into the plan to resolve many, but not all, of the residual congestion problems. The implementation of the recommended transportation actions and their effectiveness, and performance of the transportation system is assessed on a four-year cycle along with transportation system plan reaffirmation.

Also, the transportation system plan has been developed to be fiscally constrained, pursuant to U. S. Department of Transportation metropolitan planning regulations (23CFR Part 450). The total costs of the transportation plan, including both capital and operating costs, have been estimated and compared to existing available Federal, State, and local revenues. This comparison of estimated plan costs and revenues indicates that the plan may be funded largely within existing and expected available revenues. This finding is consistent with the progress made in plan implementation with respect to both public transit and arterial streets and highways, and with the increased Federal highway and transit funding being provided to the State of Wisconsin and the Southeastern Wisconsin Region as a result of SAFETEA-LU. In addition, the funding attendant to implementing the plan through the transportation improvement program is generally consistent with existing available Federal, State and local revenues.

Land Use Plan

The regional transportation system plan is designed to serve the regional land use plan. The design year 2035 regional land use plan is described in summary form in Chapter V entitled, *Anticipated Regional Growth and Change*, of SEWRPC Planning Report No. 49, *A Regional Transportation Plan for Southeastern Wisconsin: 2035*, and is fully documented in SEWRPC Planning Report No. 48, *A Regional Land Use Plan for Southeastern Wisconsin: 2035*. The regional land use plan is intended to provide a guide, or overall framework, for future land use development within the Region to the year 2035. Implementation of the plan will depend upon the voluntary actions of local, county, State, and Federal agencies and units of government in conjunction with the private sector.

The year 2035 regional land use plan contains the following recommendations:

- The primary environmental corridors, secondary environmental corridors, and isolated natural resource areas of the Region should be preserved in essentially natural, open uses, continuing to account for about 23 percent of the area of the Region. These areas encompass the best remaining features of the Region's natural landscape—lakes, rivers, streams, and associated shorelands and floodlands, wetlands, woodlands, prairie remnants, wildlife habitat, rugged terrain and steep slopes, unique landforms and geological formations, existing and potential outdoor recreation sites, and scenic areas and vistas.
- The prime, or most productive farmland in the Region should be preserved. The farmland with soils considered to be most suitable for agriculture is farmland covered by agricultural capability Class I

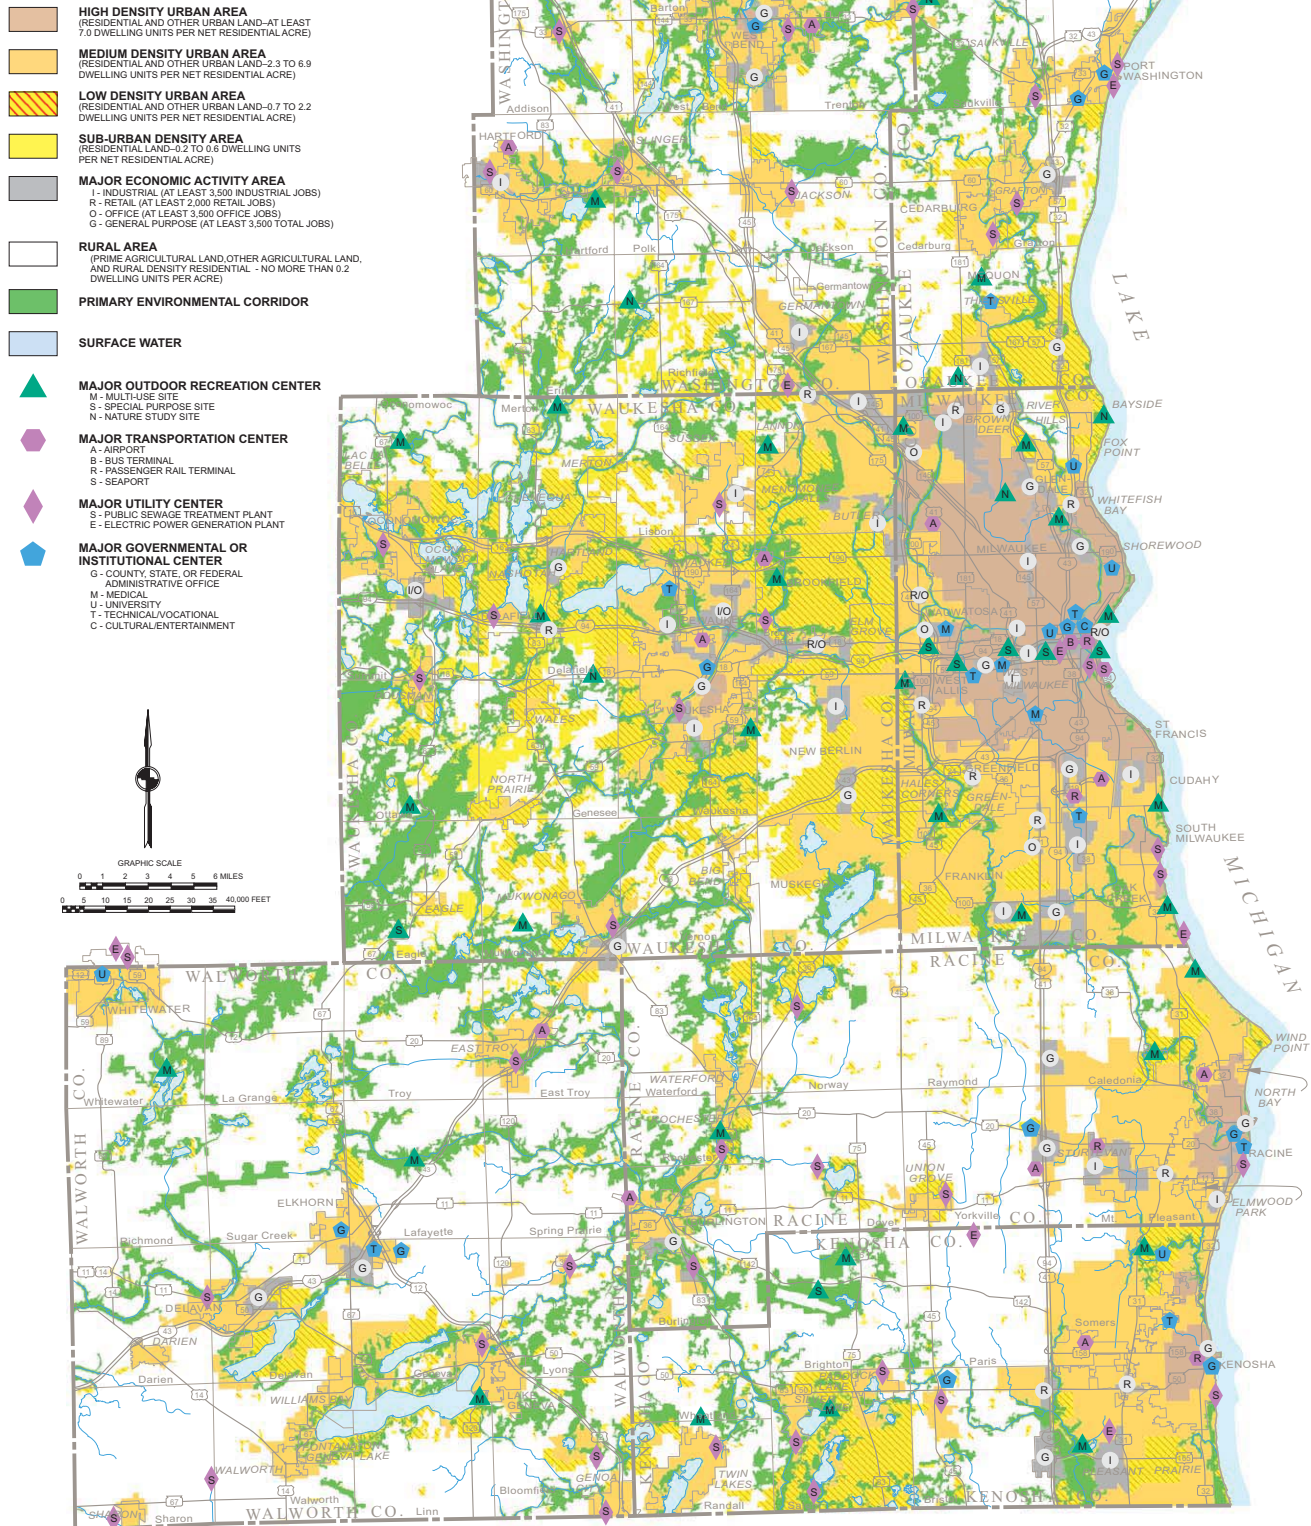

and Class II soils as classified by the U.S. Natural Resources Conservation Service. Farmland with Class I and Class II soils accounted for about 36 percent of the land area in the Region and 75 percent of all farmland in southeastern Wisconsin in the year 2000. Some Class I and Class II farmland that is located adjacent to existing urban centers and within planned urban growth/sanitary sewer service areas is necessarily proposed to be converted to urban use as a result of planned and orderly growth of those urban centers. The land use plan recommends that the counties in the Region, in cooperation with the concerned local units of government, carry out planning programs to identify and preserve prime farmland, considering farmland covered by Class I and Class II soils, and other factors including the size of individual farm units and overall size of the farming area, the availability of agricultural services, and the degree of encroachment from urban uses.

- New urban development should be accommodated within and around existing urban centers as infill development, through redevelopment, and through the orderly expansion of planned urban service areas on lands proximate to these centers. Map 1 shows these urban centers and growth areas. Particular emphasis is placed on stabilizing and revitalizing the central cities of Milwaukee, Racine, and Kenosha. The plan further proposes that the forecast increment in population and residential land be allocated to these urban centers and their planned urban growth/sanitary sewer service areas predominantly at medium and high densities—88 percent of all new housing units—in residential neighborhoods and in more mixed use settings. The plan envisions residential neighborhoods designed as cohesive units, properly related to the larger community of which they are a part, and served by an interconnected internal street, bicycle-way, and pedestrian system and by a neighborhood school, park, and shopping area. The regional plan also envisions residential development in mixed-use settings including dwellings above the ground floor of commercial uses; residential structures intermixed with, or located adjacent to, compatible commercial, institutional, or civic uses; and residential development integrated into, or located in proximity to, major employment and activity centers.
- The regional plan envisions a range of commercial and industrial areas. The largest commercial and industrial areas, in terms of employment levels, are identified as major economic activity centers. These are defined as areas containing a concentration of commercial and/or industrial land having at least 3,500 total jobs or 2,000 retail jobs. Sixty such centers would accommodate about 50 percent of all jobs in the Region in 2035. The plan envisions the continued development and redevelopment of the Region's existing major commercial and industrial centers, and those now under development or redevelopment, as shown on Map 1.
- Development outside urban centers and their proposed urban service areas would be constrained. About 2 percent of the projected increment in households in the Region between 2000 and 2035, or about 3,700 households, would be accommodated at rural density (no more than one housing unit per five acres) in such areas, with conservation subdivision designs recommended. The only other residential development outside urban centers and their planned urban service areas would be limited to that which was already committed through approved subdivision plats and certified survey maps.

The regional transportation system plan is designed to serve the regional land use plan and not a projection of current land use development trends toward further decentralization of population, employment, and urban land uses. Thus, if transportation facilities and services do indeed shape land use development, implementation of the transportation system plan should promote implementation of the land use plan, which recommends a desirable pattern of future land use with respect to travel requirements.

Map 1

REGIONAL LAND USE PLAN FOR THE SOUTHEASTERN WISCONSIN REGION: 2035

Source: SEWRPC.

Transportation System Plan

The transportation system plan has five elements: public transit, bicycle and pedestrian facilities, transportation systems management, travel demand management, and arterial streets and highways. These five elements are described in the following sections.

Public Transit Element

The public transit element of the recommended plan envisions significant improvement and expansion of public transit in southeastern Wisconsin, including development within the Region of a rapid transit and express transit system, improvement of existing local bus service, and the integration of local bus service with the proposed rapid and express transit services. Updated Map 2 displays the transit system proposals for each of the three transit system components. Altogether, service on the regional transit system would be increased from service levels existing in 2005 by about 100 percent measured in terms of revenue transit vehicle-miles of service provided, from about 69,000 vehicle-miles of service on an average weekday in the year 2005 to 137,300 vehicle-miles in the year 2035 (see Table 1).

Rapid Transit Service

The proposed rapid transit service would consist of buses operating over freeways connecting the Milwaukee central business district, the urbanized areas of the Region, and the urban centers and outlying counties of the Region. Rapid transit bus service would be provided south to Racine and Kenosha, southwest to Mukwonago and East Troy, west to Waukesha and Oconomowoc, northwest to West Bend and Hartford, and north to Cedarburg, Grafton, Saukville, and Port Washington. The proposed rapid transit system would have the following characteristics:

- The bus rapid transit service would operate in both directions during all time periods of the day and evening providing both traditional commuter and reverse-commute service at convenient service frequencies.
- The rapid transit service would operate with some intermediate stops spaced about three to five miles apart, increasing accessibility and providing connections with express transit service, local transit service, or shuttle bus or van service to nearby employment centers.

Express Transit Service

The proposed express transit service would consist of a grid of limited-stop, higher-speed routes located largely within Milwaukee County, replacing existing major local bus routes.

As envisioned under the plan:

- The express service would operate in both directions during all periods of the day and evening providing both traditional and reverse-commute service at convenient service frequencies.
- The service would generally operate with a stop spacing of about one-quarter mile with one-half mile stop spacing in outlying portions of Milwaukee County and the Milwaukee urbanized area.

Local Transit Service

The improvement and expansion of local bus transit service over arterial and collector streets, with frequent stops throughout the Kenosha, Milwaukee, and Racine urbanized areas is also proposed. Service would be provided at convenient service frequencies on weekdays, and during weekday evenings, Saturdays, and Sundays. An approximately 59 percent increase in local bus service is proposed from the 61,100 vehicle-miles of local bus service provided in 2005 on an average weekday to 97,000 vehicle-miles in the plan design year 2035. The service improvements and expansion proposed include expansion of service area and

Source: SEWRPC.

hours, and significant improvements in the frequency of local transit service provided, particularly on major local routes.

Upgrading to Rail Transit or Bus Guideways

Rapid and express transit service is proposed to initially be provided with buses. This bus service would be considered for ultimate upgrading to commuter rail for rapid transit service and to bus guideway or light rail for express transit service. Map 3 displays seven potential future commuter rail lines and six potential future bus guideway/light rail lines within southeastern Wisconsin.

There are two efforts currently underway in southeastern Wisconsin considering upgrading to fixed guideway transit. Milwaukee County in cooperation with the City of Milwaukee and Wisconsin Center District is conducting the Milwaukee downtown connector study which is considering implementation of express bus line and a starter streetcar line. Rapid transit commuter rail in the Milwaukee-Racine-Kenosha corridor was recommended for implementation at the conclusion of a corridor transit alternatives analysis study. The Counties and Cities of Milwaukee, Racine, and Kenosha are currently conducting further study addressing funding and refinement of the proposed commuter rail extension. The 2009-2012 State budget created a commuter rail authority to oversee the development of the proposed commuter rail service.

Implementation Schedule: The implementation schedule for the transportation system plan identifies the elements of the transit plan which should be available for use as of the years 2012, 2020, 2030, and 2035. The year 2035 transit plan element implementation schedule anticipates that the planned 100 percent increase in vehicle-miles of transit service over 2005 levels to the year 2035 may largely not be expected to be initiated until 2012 with an increase of service to about 100,000 vehicle-miles in 2020, 125,000 in 2030, and 137,300 in 2035. Also, under the plan, transit fares would remain at 2009 levels, adjusted for inflation.

The proposed stages for the transit plan element are summarized in Table 2. Transit system networks were prepared for each of these stages of system development of transit system service expansion and frequency of service improvement, which were utilized in the conformity determinations. The plan recommends that transit operators prepare short-range plans every three to five years detailing programmed service implementation which would serve to modify the specific elements of these staged service increases, but provide the planned vehicle-miles of service increment presented in Figure 1.

Bicycle and Pedestrian Facility Element

The bicycle and pedestrian facility element of the recommended plan is intended to promote safe accommodation of bicycle and pedestrian travel, and encourage bicycle and pedestrian travel as an alternative to personal vehicle travel. The preliminary plan envisions that as the surface arterial street system of about 3,300 miles in the Region is resurfaced and reconstructed segment-by-segment, the provision of accommodation for bicycle travel would be considered and implemented, if feasible, through bicycle lanes, widened outside travel lanes, widened shoulders, or separate bicycle paths.

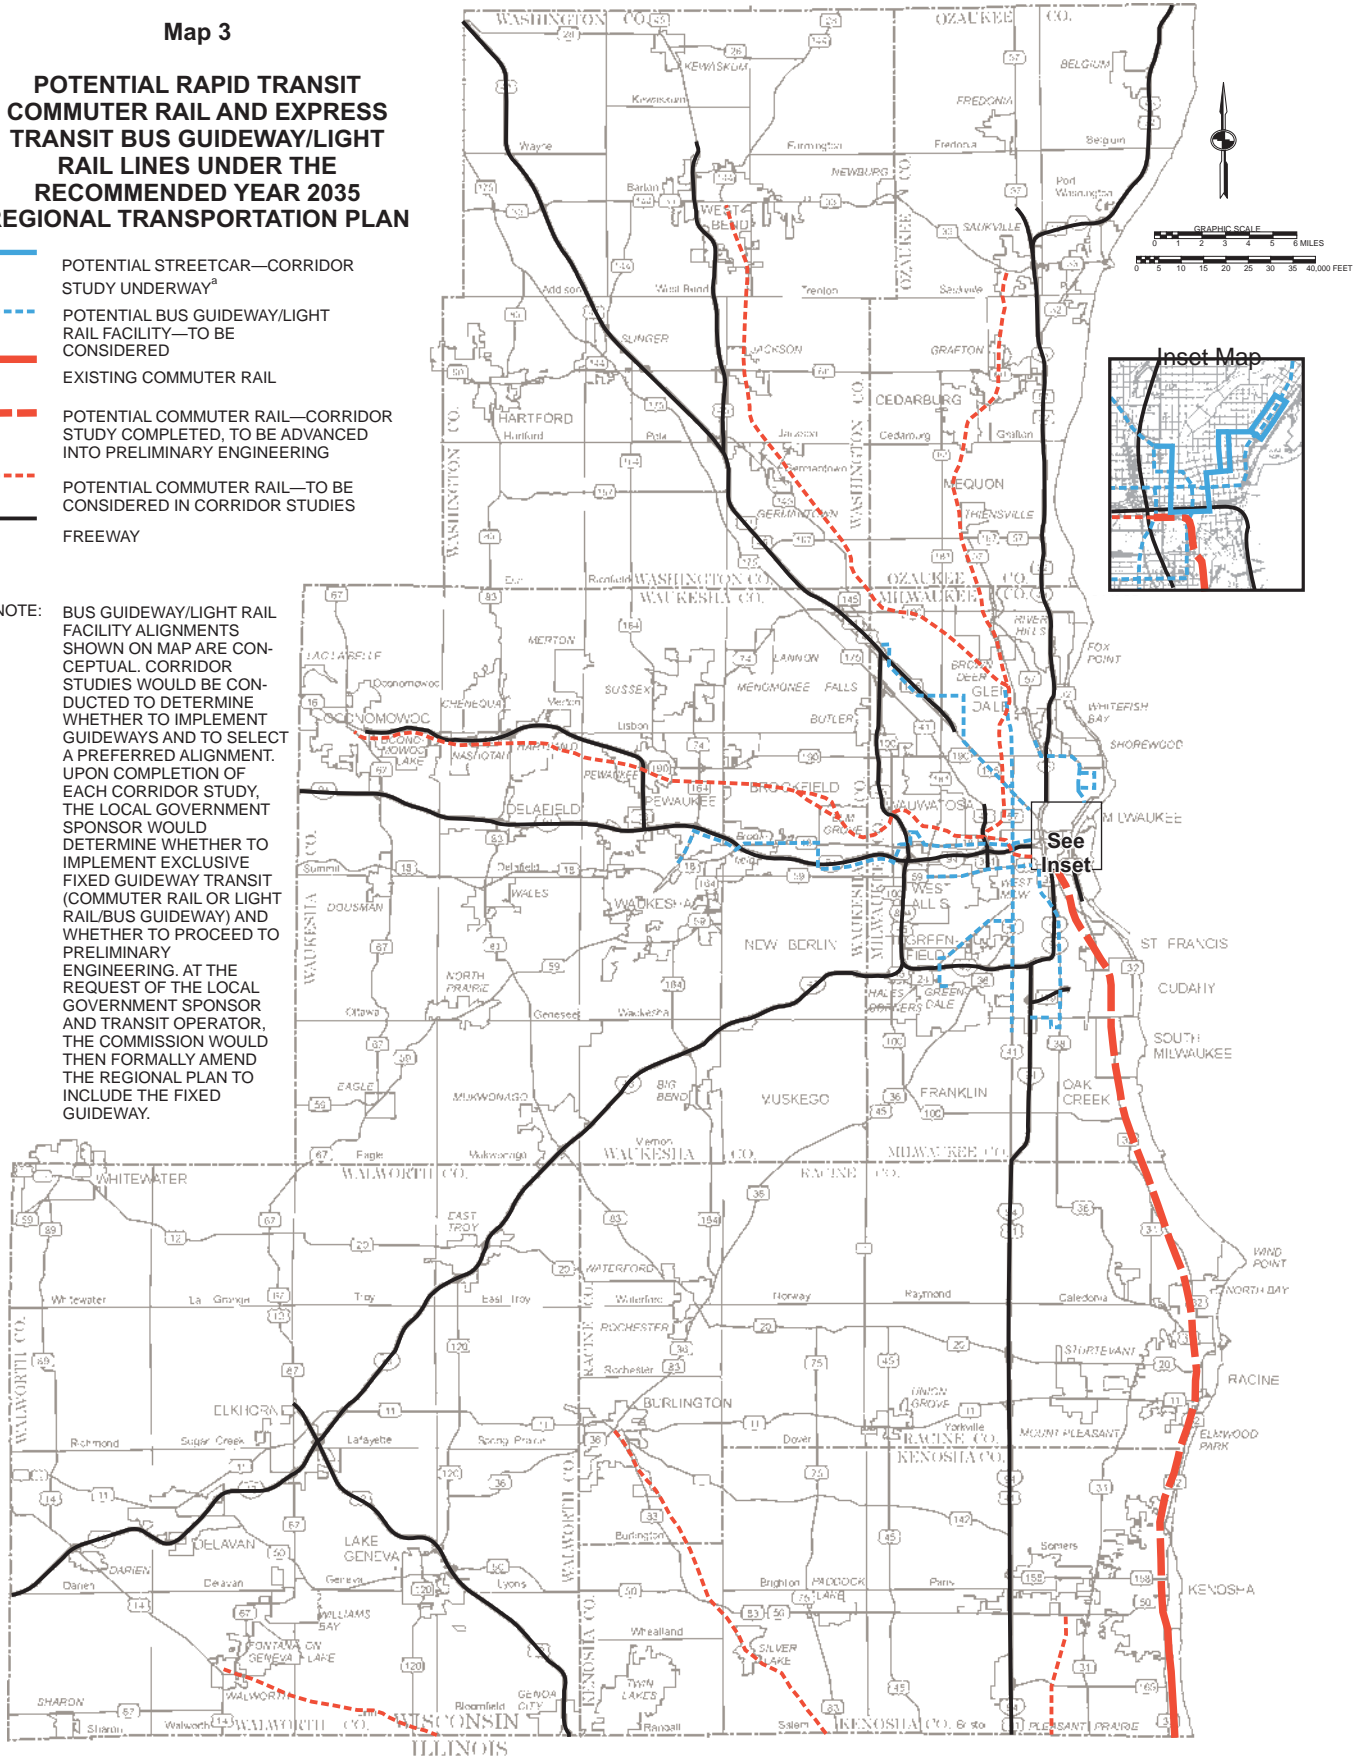

It is also proposed that a system of off-street bicycle paths be provided between the Kenosha, Milwaukee, and Racine urbanized areas and the cities and villages within the Region with a population of 5,000 or more located outside these three urbanized areas. This system of off-street bicycle paths was initially also proposed in the adopted park and open space plans prepared by the Commission for each of the seven counties of the Region. These off-street bicycle paths would be located in natural resource and utility corridors and are intended to provide reasonably direct connections between the Region's urbanized and small urban areas on safe and aesthetically attractive routes with separation from motor vehicle traffic. Some on-street bicycle connections will be required to connect segments of this system of off-street paths. These connections if provided over surface arterials would include consideration of some type of bicycle accommodation—paved shoulders, extra-wide outside travel lanes, bicycle lanes, or separate parallel

SOUTHEASTERN WISCONSIN REGION: 1995-2035**

Source: SEWRPC.

bicycle paths—or if provided over a nonarterial collector or land access street would require no special accommodation. The proposed system of on- and off-street bicycle facilities is shown on Map 4, and includes 575 miles of off-street bicycle paths with 147 miles of surface arterial and 83 miles of nonarterial connections. Approximately 238 miles of the planned 575 miles of off-street bicycle paths currently exist. Also shown on Map 4 is the surface arterial street and highway system within the Region proposed to be provided with bicycle accommodation.

The pedestrian facilities portion of the proposed bicycle and pedestrian facilities plan element is envisioned as a policy plan, rather than a system plan. It proposes that the various units and agencies of government responsible for the construction and maintenance of pedestrian facilities in southeastern Wisconsin adopt and follow a series of recommended standards and guidelines with regard to the development of those facilities, particularly within planned neighborhood units. These standards include the provision of sidewalks in the urban portions of the Region.

Transportation Systems and Travel Demand Management Elements

The transportation systems and travel demand management elements of the recommended year 2035 regional transportation plan includes systems management measures intended to manage and operate existing transportation facilities to their maximum carrying capacity and travel efficiency, and demand management measures to encourage reductions in personal and vehicular travel. The systems management measures include improved operation and management of the regional freeway system including operational control, advisory information, and incident management measures, as well as continued operation of the WisDOT traffic operations center (TOC), at which all freeway segments in the Milwaukee area are monitored, freeway operational control and advisory information is determined, and incident management detection and confirmation is conducted. Among the operational measures recommended are systemwide implementation of freeway traffic detectors and ramp meters. Recommended advisory information measures include extending variable message signs throughout the entire freeway system, and on surface arterials leading to the most heavily used freeway system on-ramps, and continued enhancement and expansion of the information provided on the Wisconsin Department of Transportation website and to the media. Recommended incident management measures include provision of closed-circuit television (CCTV) cameras on the entire regional freeway system, installation of enhanced reference markers on the entire regional freeway system, and continuation of the Traffic Incident Management Enhancement (TIME) Program, sponsored by the WisDOT, which has served to bring together, and coordinate, the transportation engineering, law enforcement, media, emergency responders, transit, tow and recovery, and other freeway system operational interests.

The plan also recommends transportation system management measures to improve the operation and management of the regional surface arterial street and highway network, including improved traffic signal coordination, intersection traffic engineering improvements, curb lane parking restrictions, access management, and advisory information.

The travel demand management measures included in the recommended year 2035 regional transportation plan include measures intended to encourage reductions in personal and vehicular travel and shifting such travel to alternative times and routes, allowing for more efficient use of the existing capacity of the transportation system. These measures are in addition to the public transit and pedestrian and bicycle plan elements previously described. Seven categories of travel demand management measures are included in the year 2035 plan: high-occupancy vehicle preferential treatment, park-ride lots, transit pricing, personal vehicle pricing, travel demand management promotion, transit information and marketing, and detailed site-specific neighborhood and major activity center land use plans.

Map 4

**OFF-STREET BICYCLE PATHS AND SURFACE ARTERIAL STREET AND HIGHWAY
SYSTEM BICYCLE ACCOMMODATION UNDER THE YEAR 2035 RECOMMENDED
REGIONAL TRANSPORTATION SYSTEM PLAN**

Source: SEWRPC.

The proposed travel demand management measures which would attempt to provide preferential treatment for transit vehicles, vanpools, and carpools on the existing arterial street and highway system consist of the provision of high-occupancy vehicle (HOV) queue bypass lanes at metered freeway on-ramps, consideration of reserved bus lanes along congested surface arterial streets and highways, and transit priority signal systems.

To promote carpooling and the resultant more efficient use of the Region's transportation system, a network of park-ride lots are proposed to facilitate carpooling. Map 5 shows the proposed system of park-ride lots including existing park-ride lots and those proposed to be served by public transit. Park-ride lots are proposed along all major routes at their major intersections and interchanges where sufficient demand may be expected to warrant provision of an off-street parking facility.

Arterial Street and Highway Element

The arterial street and highway element of the recommended year 2035 regional transportation plan totals 3,652 route-miles. Approximately 88 percent, or 3,228 of these route-miles, are recommended to be resurfaced and reconstructed to their same capacity as shown in Table 3. Approximately 344 route-miles, or less than 10 percent of the total preliminary recommended year 2035 arterial street and highway system, are recommended for widening to provide additional through traffic lanes, including 127 miles of freeways. The remaining 80 route-miles, or about two percent of the total arterial street mileage, are proposed new arterial facilities.

Highway improvements were recommended to address the residual congestion which may not be expected to be alleviated by proposed land use, systems and demand management, bicycle and pedestrian facilities, and public transit measures proposed in the recommended plan. Each proposed arterial street and highway improvement, expansion, and preservation project would need to undergo preliminary engineering and environmental studies by the responsible State, county, or municipal government prior to implementation. The preliminary engineering and environmental studies will consider alternatives and impacts, and final decisions as to whether and how a planned project will proceed to implementation will be made by the responsible State, county, or municipal government at the conclusion of preliminary engineering.

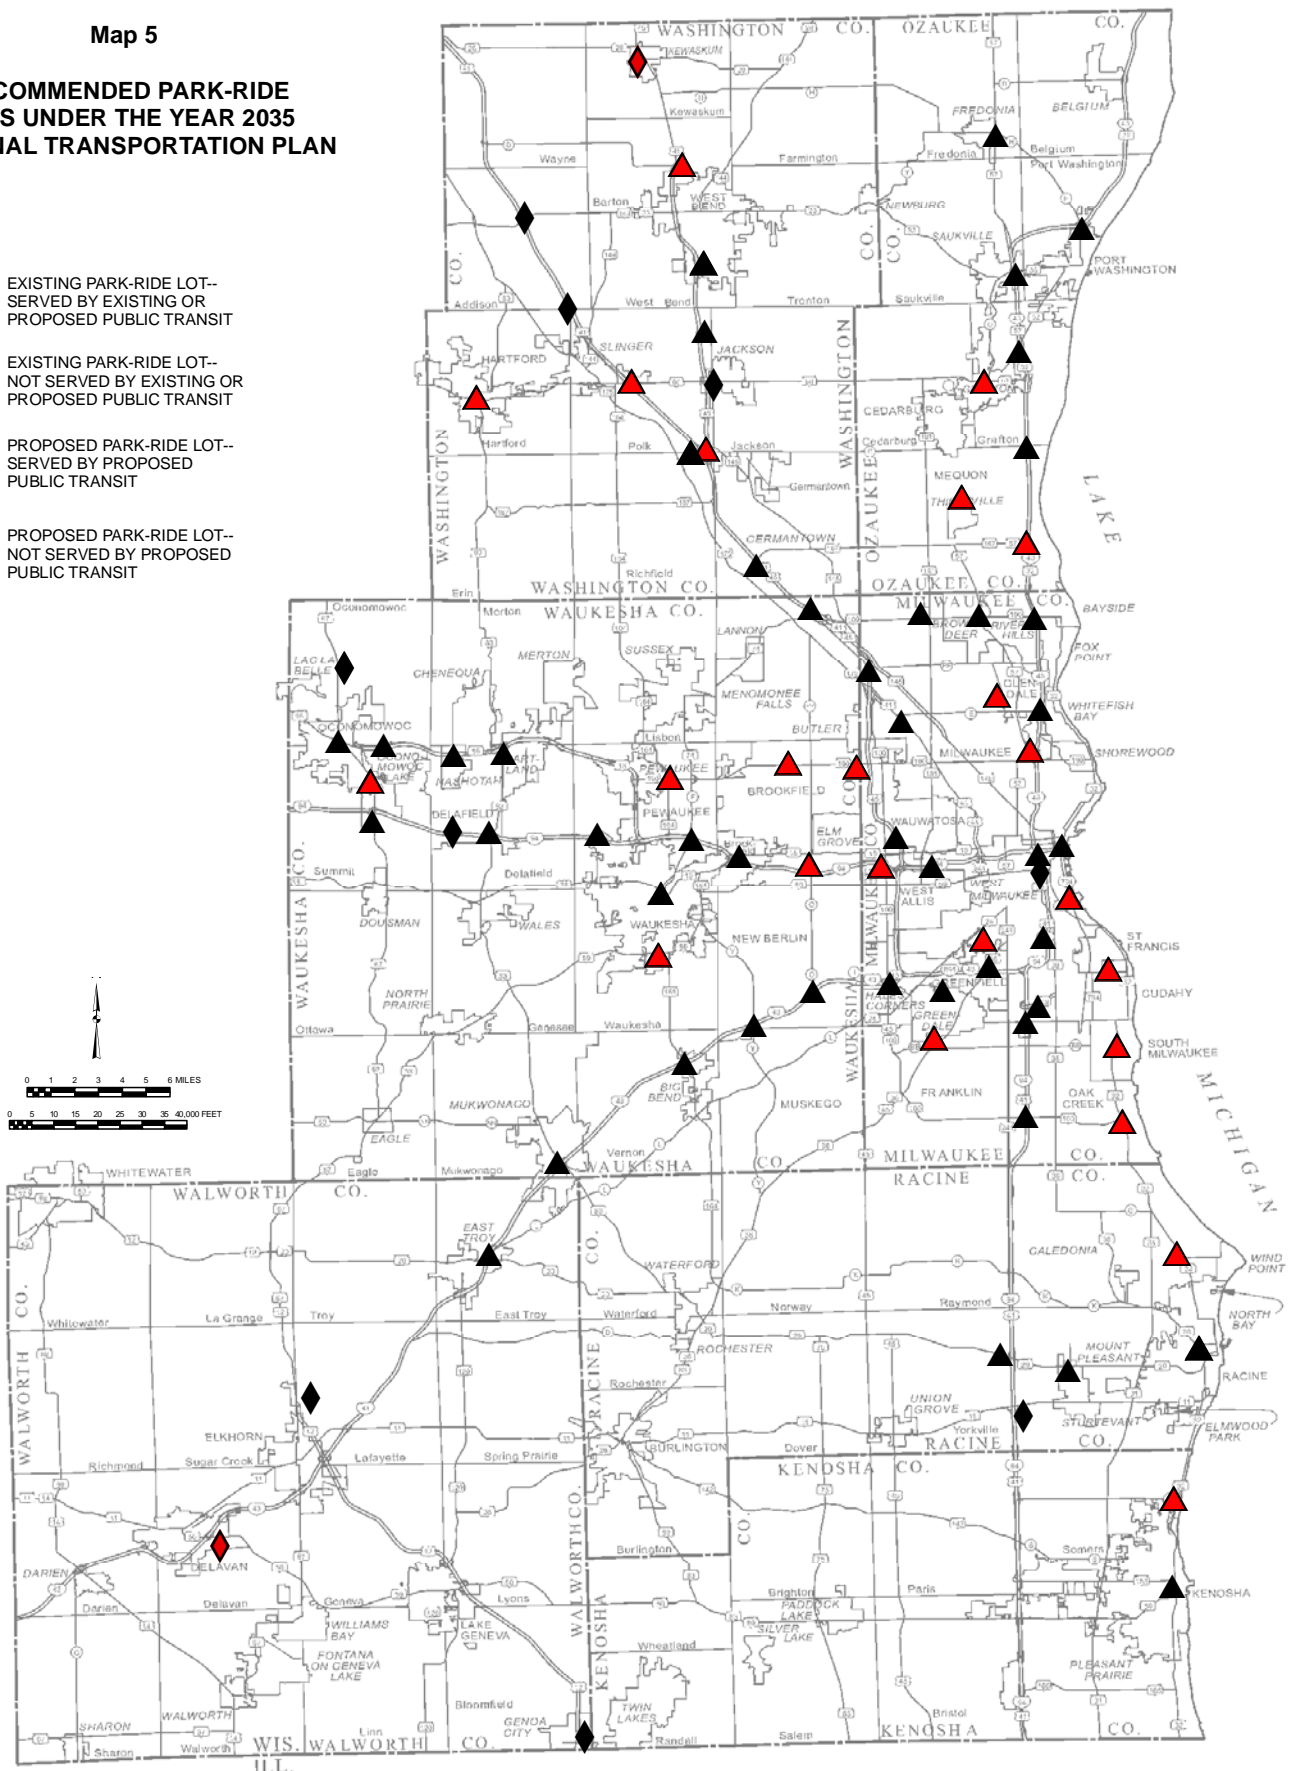

The recommended arterial street and highway system for the Region identifies the number of traffic lanes to be provided on each segment of arterial street. Arterial facilities are identified as having either two, four, six, or eight lanes. The number of lanes identified refers to through travel lanes; that is, those lanes that would carry traffic directly through intersections. Thus, the number does not include any auxiliary traffic lanes provided at intersections for left- and right-turning movements, for vehicle parking, or for use by distressed vehicles. It was assumed in the regional systems analysis that such right- and left-turn lanes will be provided where the volumes of turning vehicles would adversely affect the movement of vehicles through the intersection. The provision of turn lanes would, therefore, follow a design investigation in connection with a given improvement project. In addition to determining whether or not right- and/or left-turn lanes should be provided at intersections, the design investigation should determine whether or not a given arterial street improvement should be made using a divided or an undivided roadway cross-section, and whether it would or would not include auxiliary lanes. Thus, the precise cross-section to be selected for a given improvement project would be determined by the State, county, and local implementing agencies following appropriate design study.

The plan recommended arterial street and highway system capacity improvement and expansion to add traffic lanes to the existing arterial street system are shown for each county on Maps 6 through 12 and are listed in Table 4. These arterial highway capacity improvement and expansion recommendations represent all highway plan element projects with potential air quality impact and which are referred to in the Federal regulations as "nonexempt" projects. Table 4 also presents the anticipated implementation stages for all

Map 6

FUNCTIONAL IMPROVEMENTS TO THE ARTERIAL STREET AND HIGHWAY SYSTEM IN KENOSHA COUNTY: 2035 RECOMMENDED REGIONAL TRANSPORTATION PLAN

ARTERIAL STREET OR HIGHWAY

- NEW
- WIDENING AND/OR OTHER IMPROVEMENT TO PROVIDE SIGNIFICANT ADDITIONAL CAPACITY
- RESERVE RIGHT-OF-WAY TO ACCOMMODATE FUTURE IMPROVEMENT (ADDITIONAL LANES OR NEW FACILITY)
- RESURFACING OR RECONSTRUCTION TO PROVIDE ESSENTIALLY THE SAME CAPACITY
- 4 NUMBER OF TRAFFIC LANES FOR NEW OR WIDENED AND/OR IMPROVED FACILITY (2 LANES WHERE UNNUMBERED)

FREEWAY INTERCHANGE

- EXISTING
- RESERVE RIGHT-OF-WAY TO ACCOMMODATE FUTURE IMPROVEMENT (POTENTIAL NEW INTERCHANGE)

THE FOLLOWING NOTES SUPPLEMENT THE RECOMMENDATIONS PORTRAYED ON THIS MAP:

1. Each proposed arterial street and highway improvement, expansion, or preservation project would need to undergo preliminary engineering and environmental studies by the responsible State, county, or municipal government prior to implementation. The preliminary engineering and environmental studies will consider alternatives and impacts, and final decisions as to whether and how a plan and project will proceed to implementation will be made by the responsible State, county, or municipal government (State for state highways, County for county highways, and municipal for municipal arterial streets) at the conclusion of preliminary engineering.

2. The 127 miles of freeway widening proposed in the plan, and in particular the 19 miles of widening in the City of Milwaukee (IH 94 between the Zoo and Marquette interchanges and IH 43 between the Mitchell and Silver Spring interchanges), will undergo preliminary engineering and environmental impact statement by the Wisconsin Department of Transportation. During preliminary engineering alternatives will be considered, including rebuild as-is, various options of rebuild to modern design standards, compromises to rebuilding to modern design standards, rebuilding with additional lanes, and rebuilding with the existing number of lanes. Only at the conclusion of preliminary engineering would a determination be made as to how the freeway would be reconstructed.

3. The plan recommends that the Wisconsin Department of Transportation during its preliminary engineering for IH 94 consider the provision of an interchange with CTH K in Kenosha County, including the alternative of collector-distributor roadways connecting CTH K, STH 50, and STH 158, and an additional potential new future freeway interchange at CTH ML with IH 94. Should the preliminary engineering study conclude with a recommendation to construct one or both of the interchanges, the Regional Planning Commission, upon request of the concerned local governments and the Wisconsin Department of Transportation, would take action to amend the regional plan to recommend the construction of the interchange.

4. Sufficient right-of-way should be reserved along STH 158 from CTH H to STH 31 to accommodate its ultimate improvement to six travel lanes.

5. Sufficient right-of-ways should be reserved along CTH K from IH 94 to STH 31 to accommodate its ultimate improvement to six travel lanes.

THE FOLLOWING NOTES SUPPLEMENT THE RECOMMENDATIONS PORTRAYED ON THIS MAP:

1. Each proposed arterial street and highway improvement, expansion, or preservation project would need to undergo preliminary engineering and environmental studies by the responsible State, county, or municipal government prior to implementation. The preliminary engineering and environmental studies will consider alternatives and impacts, and final decisions as to whether and how a plan and project will proceed to implementation will be made by the responsible State, county, or municipal government (State for state highways, County for county highways, and municipal for municipal arterial streets) at the conclusion of preliminary engineering.

2. The 127 miles of freeway widening proposed in the plan, and in particular the 19 miles of widening in the City of Milwaukee (IH 94 between the Zoo and Marquette interchanges and IH 43 between the Mitchell and Silver Spring interchanges), will undergo preliminary engineering and environmental impact statement by the Wisconsin Department of Transportation. During preliminary engineering, alternatives will be considered, including rebuild as-is, various options of rebuild to modern design standards, compromises to rebuilding to modern design standards, rebuilding with additional lanes, and rebuilding with the existing number of lanes. Only at the conclusion of preliminary engineering would a determination be made as to how the freeway would be reconstructed.

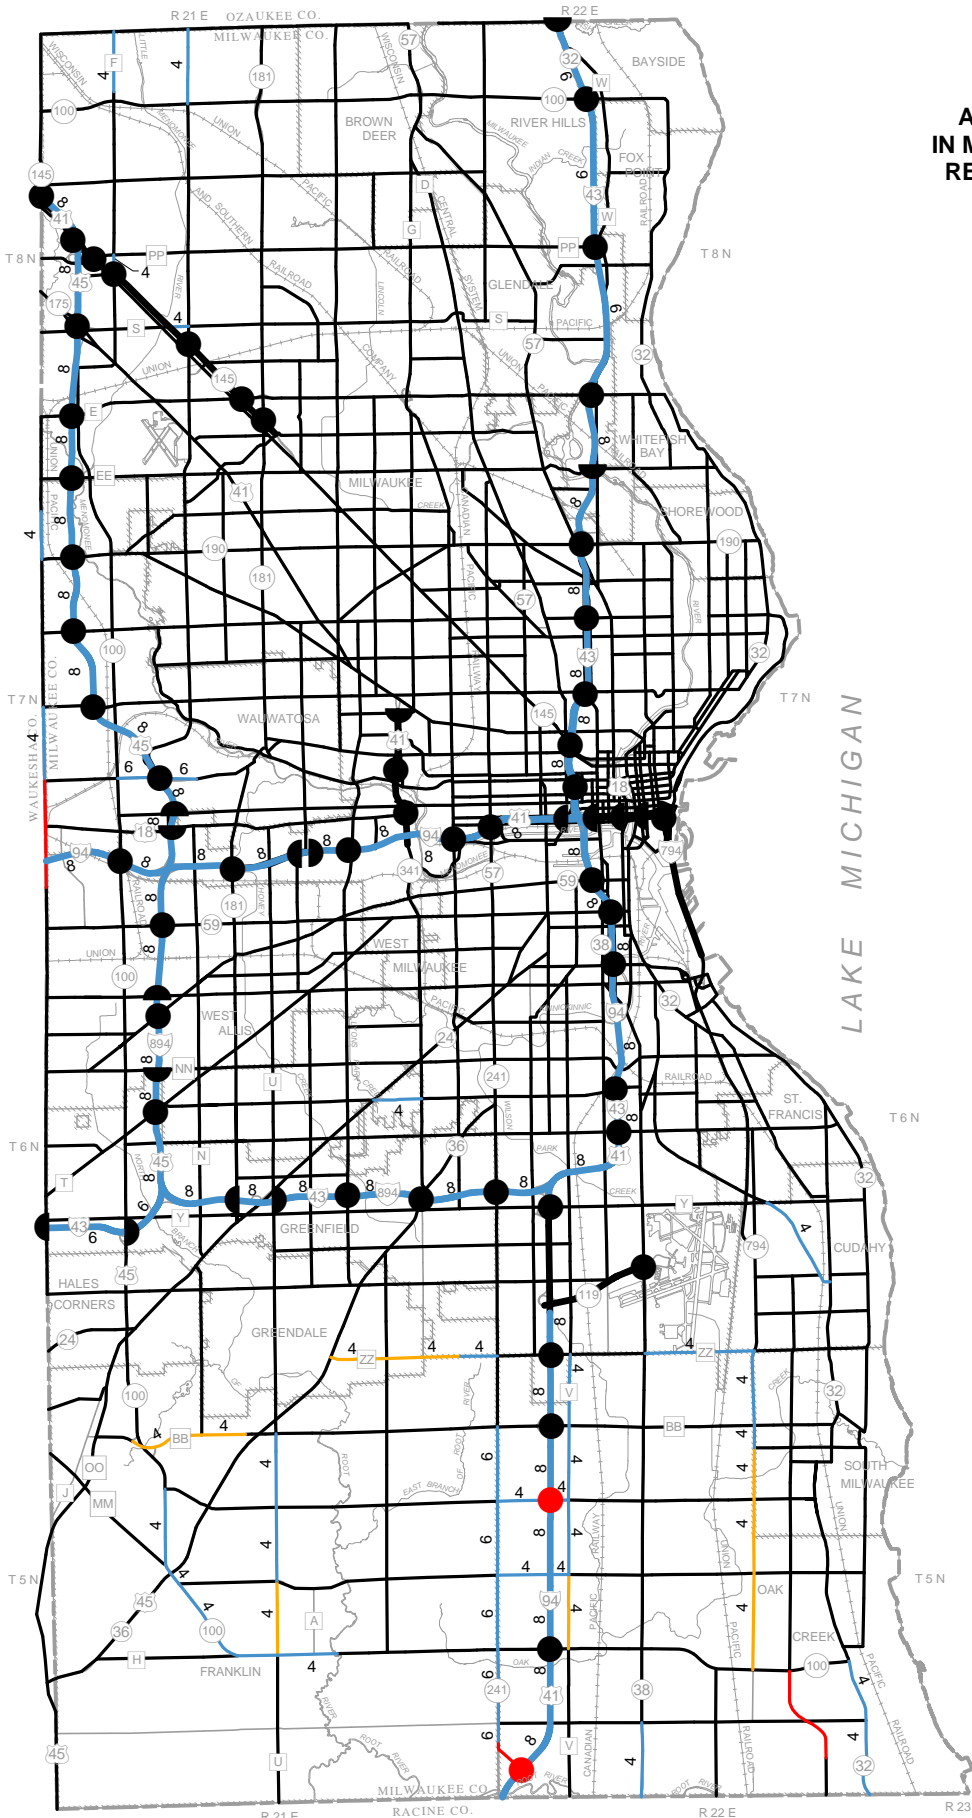

3. The plan also provides further recommendations with respect to freeway half-interchanges. The plan recommends that the Wisconsin Department of Transportation, during the reconstruction of the freeway system:

--Convert the S. 27th Street with IH 94 interchange to a full interchange;

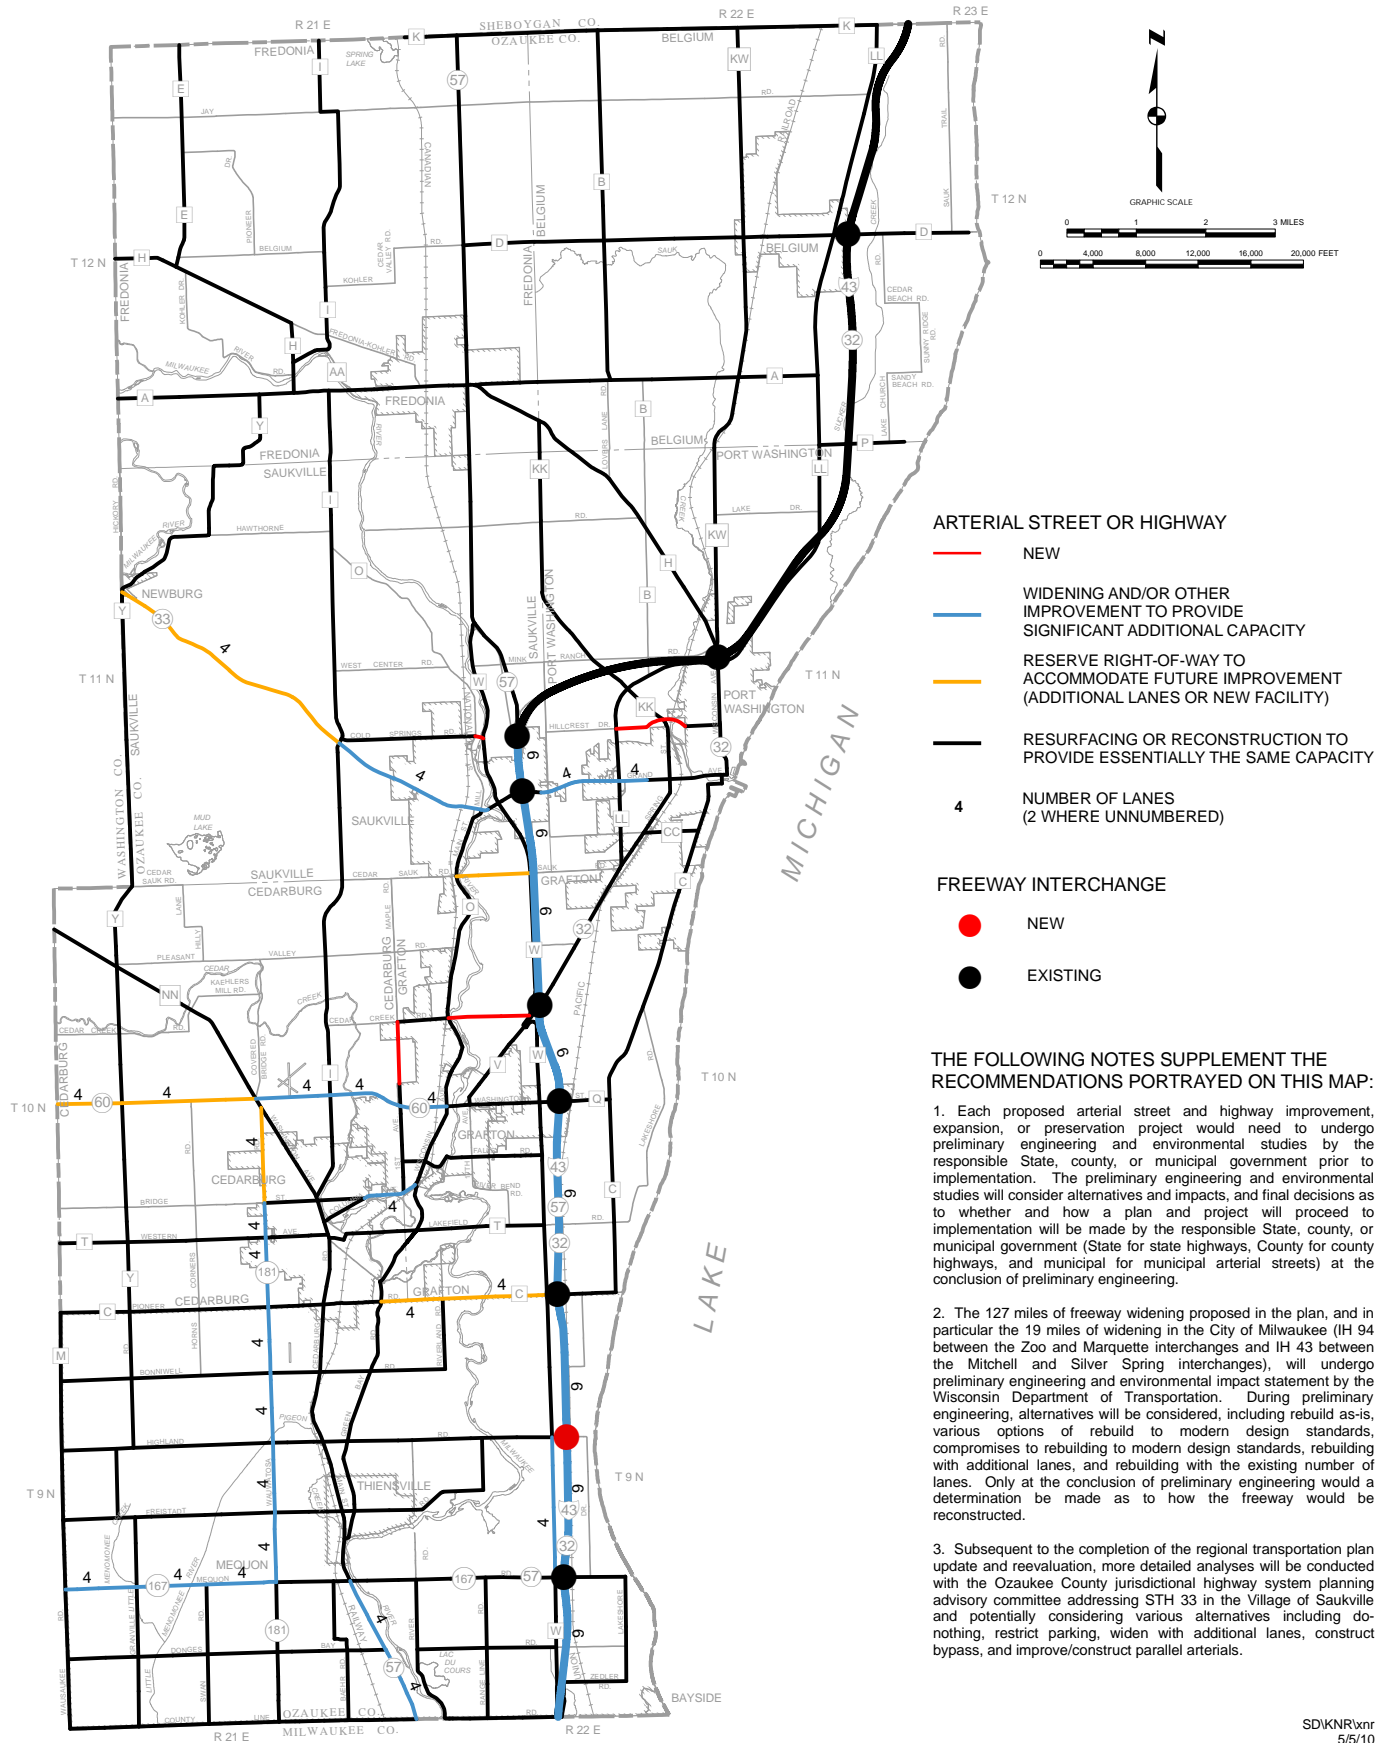

--Consider as an alternative (where conditions permit) combining selected half-interchanges into one full interchange. (For example, STH 100 and S. 124th Street with IH 43.)

--Retain all other existing half-interchanges and examine during preliminary engineering the improvement of connection between adjacent interchanges.

4. The plan also recommends that during preliminary engineering for the reconstruction of STH 100 from W. Forest Home Avenue to IH 43, consideration be given to alternatives without additional traffic lanes, alternatives with additional traffic lanes or auxiliary lanes, and alternatives with frontage roads.

**THE FOLLOWING NOTES SUPPLEMENT THE
RECOMMENDATIONS PORTRAYED ON THIS MAP:**

1. Each proposed arterial street and highway improvement, expansion, or preservation project would need to undergo preliminary engineering and environmental studies by the responsible State, county, or municipal government prior to implementation. The preliminary engineering and environmental studies will consider alternatives and impacts, and final decisions as to whether and how a plan and project will proceed to implementation will be made by the responsible State, county, or municipal government (State for state highways, County for county highways, and municipal for municipal arterial streets) at the conclusion of preliminary engineering.

2. The 127 miles of freeway widening proposed in the plan, and in particular the 19 miles of widening in the City of Milwaukee (I-94 between the Zoo and Marquette interchanges and I-43 between the Mitchell and Silver Spring interchanges), will undergo preliminary engineering and environmental impact statement by the Wisconsin Department of Transportation. During preliminary engineering, alternatives will be considered, including rebuild as-is, various options of rebuild to modern design standards, compromises to rebuilding to modern design standards, rebuilding with additional lanes, and rebuilding with the existing number of lanes. Only at the conclusion of preliminary engineering would a determination be made as to how the freeway would be reconstructed.

3. The plan also provides further recommendations with respect to freeway half-interchanges. The plan recommends that the Wisconsin Department of Transportation during the reconstruction of the freeway system:

- Convert the CTH P with I-94 interchange to a full interchange.
- Consider as an alternative (where conditions permit) the combination of selected half-interchanges into one full interchange; and
- Retain all other existing half-interchanges and examine during preliminary engineering the improvement of connection between adjacent interchanges.

4. Subsequent to the completion of the regional transportation plan update and reevaluation, more detailed analysis will be conducted with the Waukesha County jurisdictional highway system planning advisory committee addressing STH 164 in the Village of Big Bend and potentially considering various alternatives, including do-nothing, restrict parking, widen with additional lanes, construct bypass, and improve/construct parallel arterials.

highway capacity improvement and expansion recommended under the plan; more specifically, the planned capacity improvement and expansion to be open to traffic by the years 2012, 2020, 2030, and 2035 are identified. Table 5 summarizes the mileage of system improvement and expansion anticipated to be implemented by 2012, 2020, 2030, and 2035. Given the potential for individual projects to be deferred or advanced due to considerations such as right-of-way acquisition, the anticipated implementation schedule for the plan is considered to be the mileage of county and local arterial system improvement and expansion, and the mileage of state trunk highway improvement and expansion as set forth in Table 5.

2009 THROUGH 2012 TRANSPORTATION IMPROVEMENT PROGRAM (TIP) FOR SOUTHEASTERN WISCONSIN

The 2009 through 2012 transportation improvement program for Southeastern Wisconsin is documented in the SEWRPC report entitled, *A Transportation Improvement Program for Southeastern Wisconsin: 2009-2012*. The 2009 through 2012 transportation improvement program includes all Federally and otherwise funded arterial highway and public transit projects programmed within the seven-county Southeastern Wisconsin Region for the years 2009 through 2012. A listing of all projects in the transportation improvement program is referenced in Appendix B of this report.

The transportation improvement program includes projects for the entire seven-county Region both inside and outside the three urbanized areas within the Region of Milwaukee, Racine, Kenosha, and Round Lake Beach. The transportation improvement program also includes both arterial highway and public transit projects which receive Federal assistance and projects which are funded solely with State and/or local funds. The Commission's annual transportation improvement program has historically included both Federally funded and otherwise funded projects and has included projects for the entire Southeastern Wisconsin Region as well, not just the four urbanized areas within that Region. The annual transportation improvement program has included more than the Federally required listing of Federally assisted projects in the three urbanized areas in order to provide complete information on proposed arterial highway and public transit improvements. The continuation of the preparation of such a comprehensive transportation improvement program for Southeastern Wisconsin permits a comprehensive evaluation of transportation improvements with respect to air quality impacts.

Transportation Improvement Program Projects

The 2009 through 2012 transportation improvement program includes 852 projects. The transportation improvement program for the seven-county Southeastern Wisconsin Region for the years 2009, 2010, 2011, and 2012 represents a total programmed investment in transportation improvements of about \$3.97 billion. Of this total, about \$2.16 billion, or about 55 percent, is proposed to be provided in Federal aids; \$1.36 billion, or about 34 percent, in State aids; and \$444 million, or about 11 percent, in local funds. The first year of the transportation improvement program for the seven-county Southeastern Wisconsin Region represents a total programmed investment in transportation improvements of about \$1.29 billion. Of this total, about \$637 million, or about 50 percent, is proposed to be provided in Federal aids; \$515 million, or about 40 percent, in State aids; and \$135 million, or about 10 percent, in local funds.

Historically, the transportation improvement program for Southeastern Wisconsin has been structured to indicate the programmed projects in nine categories: highway system preservation, highway system improvement, highway system expansion, transit system preservation, transit system improvement, transit system expansion, highway safety, highway environmental enhancement, and off-system highway.² These nine categories are defined as follows:

²All transportation improvement program projects with potential impact on air quality, that is, "nonexempt" projects, are listed later in this report in Table 10.

Table 5

**IMPELMENTATION SCHEDULE FOR THE ARTERIAL STREET AND HIGHWAY ELEMENT
CAPACITY IMPROVEMENT AND EXPANSION: 2012, 2020, 2030, and 2035**

Southeastern Wisconsin Region	Proposed Incremental Arterial System Improvement and Expansion Route Miles				
	2012	2020	2030	2035	Total
State Trunk Highway	9	131	114	27	281
County and Local Trunk Highway	10	63	47	24	144
Total Regional Arterial System	19	194	161	51	425

Source: SEWRPC.

1. Highway Preservation
Projects which result in little or no increase in the traffic-carrying capacity of the existing arterial system, but which are necessary to maintain existing capacity and structural adequacy of the arterial facility for which the projects is proposed.
2. Highway Improvement
Projects which increase the capacity of existing arterial highways through addition of traffic lanes.
3. Highway Expansion
Projects which increase the capacity of the arterial highway system through development of new arterial streets of highways.
4. Transit Preservation
Projects which are necessary to maintain the current quality and level of service on the existing transit system.
5. Transit Improvement
Projects which improve the quality and level of service on the existing transit system.
6. Transit Expansion
Projects which either expand the existing transit system or create new transit systems or subsystems.
7. Highway Safety
Projects designed to improve or eliminate existing unsafe conditions on the Federal aid highway system as it currently exists, and are candidates for special Federal safety program funding.
8. Environmental Enhancement
Projects which, while materially reducing air, noise, or visual pollution, do not significantly affect highway system operation or capacity.
9. Highway Off-System
Projects on streets or highways which are not on the arterial street system, or a currently designated Federal aid system, and may be candidates for special Federal safety-off-system funding.

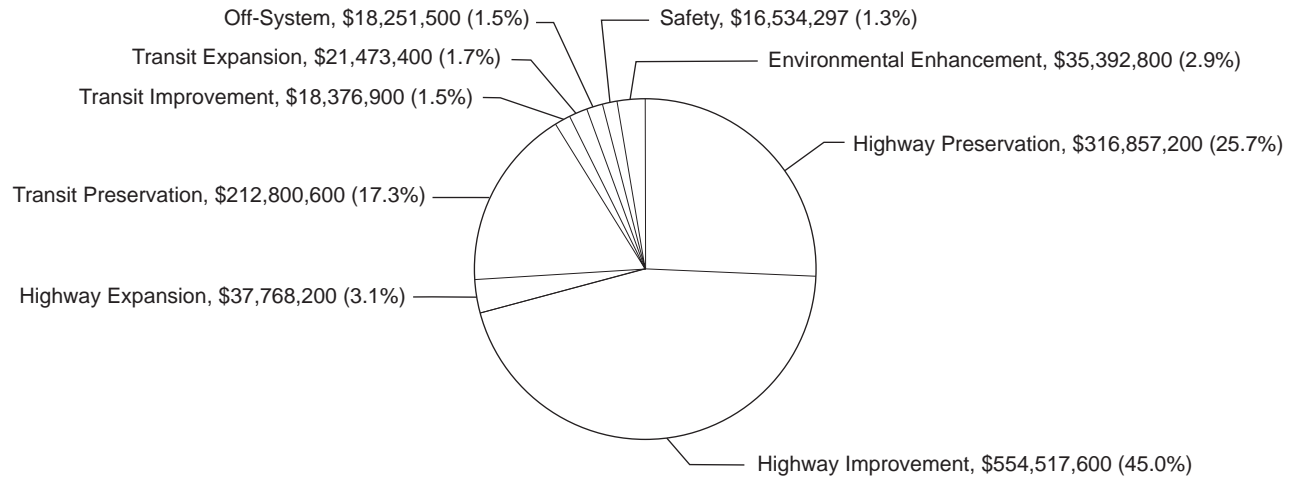

Figure 2 graphically presents the proposed expenditures for the current year (2010) of the TIP by each of the nine project categories for Walworth County and for Kenosha, Milwaukee, Ozaukee, Racine, Washington, and Waukesha Counties combined. Certain expenditure patterns are apparent from an examination of Figure 2. These include the following:

1. A significant proportion of financial resources are to be devoted to the preservation of the existing transportation facilities and services--about 44.5 percent in the Region. This allocation of resources is especially notable when it is considered that virtually none of the funding for routine highway maintenance activities--snowplowing, ice control, grass cutting, power for street lighting, and litter pickup--is included in the TIP.
2. The expenditure of funds for highway expansion is about \$38 million, or about 3.0 percent of total programmed expenditures in the Region. The expenditures for highway improvement are approximately \$555 million, or 43.7 percent of total expenditures. This compares to the \$352

Figure 2

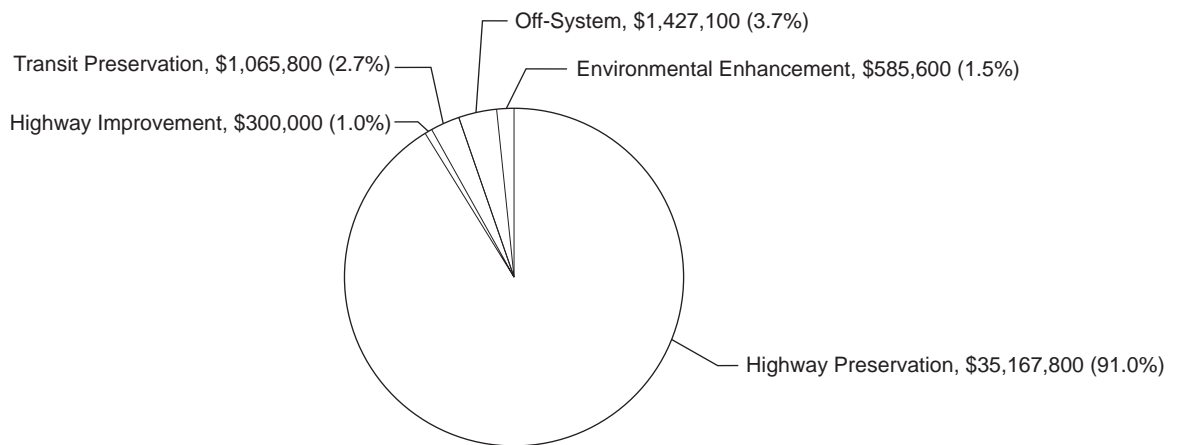

**DISTRIBUTION OF EXPENDITURES IN 2010 OF THE
2009 THROUGH 2012 TRANSPORTATION IMPROVEMENT PROGRAM BY PROJECT CATEGORY**

**Kenosha, Milwaukee, Ozaukee,
Racine, Washington and Waukesha Counties**

Total: \$1,231,972,497

Walworth County

Total: \$38,684,700

million programmed for expenditures on highway preservation, or about 27.7 percent of total programmed expenditures.

3. A significant proportion of total financial resources are devoted to public transit projects, which account for about 20.0 percent of the programmed resources. Of the total programmed resources for public transit, 84.3 percent is for preservation, and 7.2 percent and 8.5 percent for service improvement and service expansion, respectively.

The transportation improvement program has been developed to be fiscally constrained, pursuant to U. S. Department of Transportation metropolitan planning regulations (23CFR Part 450). The funding attendant to implementing the transportation improvement program has been determined to be consistent with existing available Federal, State, and local funding levels.

ASSESSMENT OF CONFORMITY OF THE YEAR 2035 REGIONAL TRANSPORTATION PLAN AND THE 2009 THROUGH 2012 TRANSPORTATION IMPROVEMENT PROGRAM

This section of the report demonstrates the conformity of the year 2035 regional transportation system plan and the year 2009 through 2012 transportation improvement program for Southeastern Wisconsin with respect to each of the conformity criteria, as well as with respect to the procedures to be used to demonstrate conformity as established by the U. S. Environmental Protection Agency for such conformity assessment. This conformity demonstration is for the six county ozone nonattainment area (eight hour moderate), including Kenosha, Milwaukee, Ozaukee, Racine, Washington, and Waukesha Counties, and the three county PM_{2.5} nonattainment area including Milwaukee, Racine, and Waukesha Counties.

Conformity Determination Procedural Requirements

The procedures to determine conformity set forth in the August 15, 1997, *Federal Register* (40CFR Parts 51 and 93); July 1, 2004, *Federal Register* (40 CFR Part 93); January 24, 2008 (40 CFR Parts 51 and 93); March 24, 2010, *Federal Register* (40 CFR Part 93); are: 1) use of latest planning assumptions, 2) use of latest emission model, 3) interagency and public consultation, 4) provision for timely implementation of transportation control measures, 5) transportation plan content, and 6) procedures for determining regional transportation plan related emissions.

Use of Latest Planning Assumptions

This conformity determination procedural requirement (40 CFR, Part 93.110) specifies that the conformity assessment must be based upon the official and most current planning assumptions, including current and future population levels, employment levels, travel demand, traffic volumes, and transit ridership.

The Southeastern Wisconsin Regional Planning Commission is the gubernatorially designated MPO for the Kenosha, Milwaukee, Racine, and the Wisconsin portion of the Round Lake Beach urbanized areas within Southeastern Wisconsin and also the statutory official areawide planning agency for the seven-county Southeastern Wisconsin Region, which contains these four urbanized areas. The Commission is the agency within Southeastern Wisconsin responsible under State law for the preparation of current population, household, employment, travel, and traffic estimates and also for the preparation of future household, employment, travel, and traffic forecasts. The Commission also maintains the travel and traffic simulation models which are used within Southeastern Wisconsin for transportation and air quality planning. The models used in this conformity analysis are the same as used by the Commission in its regional planning efforts, and as well in support of air quality planning by the Wisconsin Department of Natural Resources. The eight hour ozone attainment and maintenance plan submitted to USEPA in September 2009 includes a motor vehicle emissions budget (MVEB) considered adequate for the purposes of transportation conformity.

This MVEB was predicated on a high growth scenario from the Commission's year 2035 planning with attendant growth in vehicle-miles of travel of 1.6 percent per year for 2005-2012, and 1.1 percent per year for 2012-2020 and a 7.5 percent additional emissions to account for uncertainty in transportation emission forecasts. This conformity is based upon the Commission official intermediate growth year 2035 forecasts with attendant 1.5 percent annual increase in vehicles miles travel from the year 2000 1.1 percent annual increase from 2000-2012, 1.0 percent annual increase from 2012 to 2020, and 0.6 percent annual increase from 2020 to 2035.

The USEPA on October 9, 2009 designated a three-county (Milwaukee, Racine, and Waukesha) PM_{2.5} nonattainment area within southeastern Wisconsin. As there is no approved state implementation plan and attendant MVEB, this conformity analysis will be conducted using a build no greater than baseline test consistent with 40 CFR 93.119. The attendant emissions estimate for the baseline will be for the year 2008 and will be based on traffic count data published annually by the Wisconsin Department of Transportation.

The determination of conformity of the transportation system plan and transportation improvement program requires specific travel and emission forecasts for the years 2012, 2020, 2030, and 2035. The population, household, and employment data at regional and subregional levels for the years 2012, 2020, and 2030 have been projected by interpolation between existing regional and subregional estimates and the year 2035 regional forecasts and subregional planned forecast allocations based upon the regional land use plan. The regional level year 2035 forecasts for population, households, and employment are set forth in Table 6, along with the interpolated 2012, 2020, and 2030 population, household, and employment levels.

As part of regional transportation planning over the years, the implications of a range of different future development scenarios for Southeastern Wisconsin have historically been explored, including such scenarios with respect to vehicle-miles of travel. The different scenarios included intermediate- and high-growth scenarios for the Region as a whole, centralized and decentralized land use patterns, and alternative regional transportation systems ranging from a "no-build" option, to an alternative which would substantially increase the price of automobile transportation, to the recommended system plan. The results of analyses of these scenarios indicated that the future annual growth in vehicle-miles of travel within the Region may be expected to range from about 1.0 percent to 2.0 percent. The analyses indicated that alternative land use patterns and transit and highway improvements may be expected to have little impact on vehicle-miles of travel, accounting for less than 0.1 percent variation in annual growth. Variations in regional economic growth and substantial changes in the perceived cost of automobile use may be expected to account each for about 0.5 percent variation in growth annually.

The determination of conformity utilizes the travel simulation models which have been maintained, refined, and validated by the Commission since the 1960s, and utilized in the preparation of the regional transportation system plan and for the motor vehicle emissions forecasts for the State Implementation Plan. These models and their validation are described in Chapter VI, "Travel Simulation Models," of SEWRPC Planning Report No. 49, *A Regional Transportation Plan for Southeastern Wisconsin: 2035*. The Commission travel models were revalidated and recalibrated, using new data provided by a major origin and destination travel survey completed within the Region in 2001. The models were validated for the years 2000-2001 by applying the models with Census data and 2001 transportation network data and comparing model estimates of trip generation, trip distribution, highway traffic, and transit ridership to estimates derived from travel surveys and actual traffic and transit ridership counts. The validation indicated that the models were able to accurately replicate not only observed trip generation, travel pattern, modal choice, and vehicle-miles of travel data, but also model-estimated individual arterial street traffic volume within 10 percent of the actual average weekday vehicular traffic.

Table 6

**FORECAST POPULATION, HOUSEHOLD, AND EMPLOYMENT LEVELS
FOR SOUTHEASTERN WISCONSIN: 2012, 2020, 2030, AND 2035**

Southeastern Wisconsin				
Characteristics	Forecast Year			
	2012	2020	2030	2035
Population	2,054,200	2,140,800	2,239,200	2,276,000
Households	820,100	865,000	909,900	925,800
Employment	1,254,000	1,308,500	1,343,600	1,368,100

Six County Area: Kenosha, Milwaukee, Ozaukee, Racine, Washington, and Waukesha Counties				
Characteristics	Forecast Year			
	2012	2020	2030	2035
Population	1,946,100	2,021,400	2,105,900	2,136,000
Households	778,400	818,600	858,100	871,400
Employment	1,194,800	1,244,200	1,276,200	1,298,700

Three County Area: Milwaukee, Racine, and Waukesha Counties				
Characteristics	Forecast Year			
	2012	2020	2030	2035
Population	1,552,200	1,598,400	1,650,000	1,667,500
Households	626,100	652,400	667,200	685,600
Employment	992,300	1,027,200	1,051,600	1,069,100

Source: SEWRPC.

Under this procedural requirement, changes in the transit system with respect to service levels and fares since the last plan and improvement program conformity determination are to be described. The last conformity determination was completed in March 2009 on the year 2035 plan and the 2009-2012 improvement program. That conformity determination was the third determination completed on the regional transportation plan for the year 2035, with the first conformity determination completed in June, 2006. The year 2035 regional transportation plan proposed that transit service levels measured in vehicle-miles of service double by the year 2035, with the increase in service levels beginning in 2007 and increasing approximately 2.5 percent annually to the year 2035. The plan also proposed that transit fare increases be held to general price inflation. Since 2005, the base year of the year 2035 plan, transit service levels have declined approximately 4.5 percent. With respect to transit fares, the adult base fare on the Milwaukee County Transit System, which represents over 90 percent of the transit service provided in Southeastern Wisconsin, was \$1.75 in 2005, having last been increased in 2004. This adult base fare has been adjusted twice since 2005, an increase to \$2.00 in 2009, and an increase to \$2.25 in 2010, representing an increase of 29 percent. General price inflation is estimated to have experienced an increase of about 12 percent over the same period. The average fare per revenue passenger, which accounts for changes in the adult base fare and the price of passes and tickets, increased from \$0.81 in 2005 to \$1.05 in 2009, the last year revenue ridership and passenger revenue data are available, a 30 percent increase. Due to the lag in implementing the planned transit service expansion and the increase in average fare per revenue passenger, this conformity determination assumed the proposed 100 percent increase in transit service would begin in the year 2012, with 3.1 percent annual increases to the year 2035. Though fair increases have been greater than the inflation in recent years, it was also assumed that, with the creation of a regional transit authority, that the average increase in transit fares would be held to general price inflation to the year 2035.

The redesignation and maintenance State Implementation Plan for the eight hour ozone standard assumes within the six county nonattainment area emissions consistent with a 1.6 percent annual increase in vehicle-miles of travel to the year 2012, and 1.1 percent annually between 2012 and 2020. The official intermediate year 2035 transportation system plan forecast is for approximately a 1.1 percent annual increase in vehicle miles of travel from the year 2001 to the year 2012, 1.0 percent annual increase from the year 2012 to 2020, and 0.6 percent annual increase from 2020 to the year 2035. The vehicle-miles of travel forecasts in the State Implementation Plan, and the regional transportation plan are consistent, with the State Implementation Plan forecast being equal to, or greater than, the regional plan forecasts. The higher rate of growth assumed in the State Implementation Plan provides latitude for potential vehicle-miles of travel increases in a year or short-term period of years which may exceed long-term average increases, for example, during short-term periods of rapid economic growth and gasoline price decline. Lower rates of increase in vehicle-miles of travel are anticipated in the future due to anticipated slower growth in employment and labor force levels, stability in household size and slower growth in household levels, and modest increases in the fuel-related costs of operating a motor vehicle.

The Wisconsin Department of Transportation has prepared an estimate of the actual growth in vehicle-miles of travel for the years 1990 to 2008 in the Southeastern Wisconsin Region based upon traffic counts taken by the Department which represents the universe of Highway Performance Monitoring System (HPMS) data. Traffic counts are performed by the Department every three years in each County. Based upon these counts, the vehicle-miles of travel in Southeastern Wisconsin is estimated to have increased by about 1.1 percent annually from 1990 to 2008, or slightly less than incorporated in the redesignation and maintenance State Implementation Plan.³

³ The traffic counts as taken by the Wisconsin Department of Transportation are as follows: Kenosha County (9 percent of Region vehicle-miles of travel (VMT) in 1990), 1.59 percent annual growth from 1990 to 2008; Milwaukee County (46 percent of Region VMT in 1990) 0.23 percent annual growth from 1990 to 2008; Ozaukee County (5 percent of Region VMT in 1990) 1.08 percent annual growth in VMT from 1992 to 2007; Racine County

Use of Latest Emissions Model

A second procedural requirement for the plan and program conformity determination (40CFR Part 93.111) requires use of the latest air pollutant emissions estimation model. Accordingly, this determination of conformity utilizes the latest emission estimation model available, the U. S. Environmental Protection Agency MOBILE6 air pollutant emissions estimation model. The assumptions in the emissions estimation model for the years 2012, 2020, 2030, and 2035 and the specific emission factors used in this conformity analysis, are presented in Table 7. This emissions estimation model is the same model used by the State of Wisconsin Department of Natural Resources in its September 2009 submittal of six county southeastern Wisconsin eight hour ozone non-attainment area transportation conformity budgets for volatile organic compounds and nitrogen oxides. The specific emission factors used for each of the years of analysis in the conformity determination were provided to the Regional Planning Commission by the State of Wisconsin Department of Natural Resources to assure consistency between this conformity determination and the State plan. The emission factors for this conformity determination do assume implementation of, and assume credit for, Tier 2 motor vehicle standards and low sulfur gasoline regulations.

Interagency and Public Consultation

A third procedural requirement for plan and program conformity determination (40CFR Part 93.112) relates to interagency and public consultation. The development of the transportation system plan has involved interagency and public consultation, including, specifically, such consultations with respect to air quality impacts and the implications for conformity of the new plan and its alternatives. The 2009-2012 transportation improvement program directly implements the plan and is consistent with the plan schedule for implementation. In particular, the State of Wisconsin Department of Transportation, the State of Wisconsin Department of Natural Resources, the U. S. Department of Transportation, and the county and local units of government have all been extensively involved in the development of the regional plans, including with respect to the consideration and evaluation of alternatives. These Federal, State, county, and local units and agencies of government have also been consulted, and have, as members of the Commission Advisory Committee guiding the preparation of the regional plan, reviewed and approved the travel simulation models utilized in the regional plan preparation and as well the level of detail of the transportation system plan. It should be noted, with respect to the latter, that the transportation system plan incorporates all local, express, and rapid transit facilities and services and includes both geographic expansion of service and improvement of frequency of transit service. The plan also incorporates the entire arterial street and highway network of the Region, including all arterials in both urban and rural areas and major collectors in rural areas. The agencies concerned have also given consideration to the treatment in the travel simulation modeling and in the transportation system plan of transportation control measures. In addition, there has been public consultation with respect to the regional transportation system plan, including consultation on alternatives considered and evaluated. The consultation includes a series of public informational meetings and hearings, transmittal of a series of newsletters to over 2,500 individuals, extensive outreach activities, and a website including all study and plan materials. The public consultation

(10 percent of Region VMT in 1990) 0.1.06 percent annual growth in VMT from 1990 to 2008; Walworth County (6 percent of Region VMT in 1990) 1.39 percent annual growth in VMT from 1990 to 2008; Washington County (6 percent of Region VMT in 1990) 1.97 percent annual growth in VMT from 1992 to 2007, and; Waukesha County (19 percent of Region VMT in 1990) 1.70 percent annual growth in VMT from 1991 to 2006. (See Appendix C.)

The Regional Planning Commission also prepared an estimate of the growth in vehicle-miles of travel within the Southeastern Wisconsin Region. The Commission used annual traffic counts available on the Region's freeway system, traffic counts on the surface arterial system which are available every three years, and special surface arterial counts conducted every year to factor the counts which are only available every three years. The Commission's estimate of the growth in vehicle-miles of travel from 1990 to 2008 was 1.0 percent annually, or about the same as the Wisconsin Department of Transportation estimate of 1.1 percent annually.

^bNo anti-tampering program was assumed for the six-county area.

Source: Wisconsin Department of Natural Resources and SEWRPC.

on the 2035 plan is documented in a series of reports which document the comments received on the plan and its social, economic, and environmental impacts, and the consideration and response to the public comment. The public consultation on the quadrennial review, update, and reaffirmation of the year 2035 regional transportation plan includes the transmittal of a newsletter to approximately 2,000 individuals, and a public meeting and hearing. Comments received and the consideration and response are documented in Chapter 6 of SEWRPC Memorandum, *The Review, Update, and Reaffirmation of the Year 2035 Regional Transportation Plan*.

State and county and municipal governments have also been directly involved in the preparation of the 2009-2012 transportation improvement program through their submittal of projects for inclusion in the transportation improvement program and their consideration and approval of the transportation improvement program.

Provision for Timely Implementation of Transportation Control Measures

A fourth procedural requirement for plan and program conformity determination, (40CFR Part 93.113) is that the transportation plan and program must provide for timely implementation of all transportation control measures in the redesignation and maintenance State Implementation Plan for Air Quality, submitted in September 2009, and the transportation plan or program may not interfere with the implementation of any transportation control measure in the State Implementation Plan. There are no transportation control measures in the State Plan. The State plan submitted in November 1993 by the State of Wisconsin Department of Natural Resources did include implementation of the Federally mandated Employee Commute Options program. The Employee Commute Options Mandate was eliminated on December 23, 1995, and affected ozone nonattainment areas were allowed to substitute other emission reduction efforts for the reductions expected from the Employee Commute Options program. The Wisconsin Department of Natural Resources formally withdrew its Employee Commute Options program State Implementation Plan in May 1996 (after U. S. Environmental Protection Agency approval of the Wisconsin 15 percent State Implementation Plan in March 1996). The Wisconsin Department of Natural Resources indicated that it would be substituting the Wisconsin Partners for Clean Air program for the Employee Commute Options program. The Partners program requests that large employers and other interested parties continue with any previously mandated Employee Commute Options related trip reduction activities, sign a pledge to promote trip reduction and transit promotion activities, promote Ozone Action Day efforts, or make point and area source emission reductions beyond current federal and state requirements. The regional transportation system plan and transportation improvement program would in no way interfere with the implementation of the Partners program and would assist in its implementation. The transportation system plan recommends a number of measures which should serve to assist in the implementation of the trip reduction goals that are a key component of the Partners program, including the recommendation of an expansion of transit service which should make transit a more available and attractive option for commuters. The 2009-2012 transportation improvement program includes a number of measures which should serve to significantly assist in the implementation of the Partners program, including the provision of transit service as an option for commuters.

Transportation Plan Content

A fifth procedural requirement for plan and program conformity determination is the content, or level of detail, of the transportation plan. The transportation plan and the travel simulation modeling analysis of attendant plan emissions fully meet the requirements of transportation plan content (40CFR 93.106). The plan includes all additions to the transportation system with respect to both highway and public transit. All additions of arterial street system highway capacity, including widening of arterial streets to provide additional traffic lanes and construction of new arterial facilities, are included in the plan. This arterial street system includes 3,600 miles of streets within the seven-county Southeastern Wisconsin Region, or about one-third of the total street system, and includes all state, county, and municipal arterials within urban areas

and all arterials and major collectors within rural areas of the Region. The plan also includes the total transit system, including the local, express, and rapid transit system components, and includes all aspects of plan-recommended improvements including frequency of service and expansion of geographic system coverage.

The travel simulation modeling conducted under this conformity analysis is fully consistent with, indeed identical to, the travel simulation modeling conducted by the Commission for the preparation of the regional transportation system plan and for the preparation of the State Implementation Plan. The travel simulation modeling for the conformity determination is sensitive to the added capacity and service provided by each highway and transit plan proposal, accurately reflecting its potential effect through changes in travel time and attendant route choice, mode choice, travel patterns, and trip generation. The transportation system plan and its treatment in the travel simulation modeling analysis goes beyond the Federally required consideration of Federally defined regionally significant projects, that is, principal arterials and transit fixed guideways, in that it includes all arterial and public transit facilities. Also, the transportation system plan is consistent with the adopted regional land use plan since it was designed to serve and promote implementation of the land use plan. The consistency between the transportation system and land use plans was tested by comparing both the accessibility provided under the transportation plan, and the incremental accessibility provided by the transportation system plan relative to a "no-build" plan, to the land use plan.

Transportation Emissions and Travel Modeling Procedures

The procedures for estimating the regional transportation plan and program emissions also fully meet the emission and travel modeling requirements, (40CFR 93.122).⁴ Specifically, the travel simulation modeling analysis for this conformity determination incorporates in the analysis all planned highway capacity improvements and expansion, for all arterial facilities, including major collectors in rural areas, and for all transit improvements and expansion. The travel simulation modeling analysis does not assume emission reductions for any transportation control measures or control programs external to the transportation system, as, for example, changes in motor fuel volatility or vehicle inspection and maintenance programs, except with respect to such programs incorporated in the State Implementation Plan.

The Federal requirements for determination of conformity after January 1, 1997, (40 CFR 93.122(b)), have been met under this conformity determination. The travel and traffic simulation models used to estimate the transportation plan and improvement program air pollutant emissions are network-based models which forecast travel demand and traffic volume based upon economic and demographic forecasts, planned land use allocation patterns, and the characteristics of the transportation system. As already noted, the travel models are fully described in Chapter VI, "Travel Simulation Models," of SEWRPC Planning Report No. 49, *A Regional Transportation Plan for Southeastern Wisconsin: 2035*. The models were calibrated with 2001 large-scale travel survey data and represent state-of-the-art professional practice approved by the Commission Advisory Committee on Regional Transportation System Planning, which Committee includes representation from Federal, State, and local governments.

The models were validated for the years 2000-2001 using 2000 census data and land use inventory data, and 2001 travel survey data and transportation system inventory data with respect to simulation of both transit ridership and arterial street and highway traffic by comparing model estimates to actual counts.

⁴A U. S. Department of Transportation, Federal Highway Administration report issued May 21, 1997, on the Federal Review of the travel modeling conducted by the Commission, is documented in Appendix E of SEWRPC Memorandum Report No. 147, entitled, *Assessment of Conformity of the Amended Year 2000-2002 Transportation Improvement Program and Amended Year 2020 Regional Transportation Plan With Respect to the State of Wisconsin Air Quality Implementation Plan—Six County Severe Ozone Nonattainment Area and Walworth County Ozone Maintenance Area, along with a Commission report which cites how each requirement in 40CFR 93.122 is met.*

The future travel and traffic forecasts from the models have been compared to historic trends. The population, employment, land use, and other assumptions attendant to the travel and traffic forecast are documented.

The models incorporate sensitivity to peak-hour traffic congestion and travel time through a capacity restrained traffic assignment. A peak hour traffic assignment with forecast peak hour traffic volumes and speeds is prepared. The peak hour volumes and speeds are sensitive to the total travel volume on the facility and the potential for the spreading of peak hour traffic to adjacent hours of the day. The models incorporate the peak-hour congestion and travel times as determined in traffic assignment in the trip distribution model to determine travel patterns and mode choice model to determine transit ridership.

The models incorporate an iteration, or feedback, of model steps so that the travel times used to determine travel patterns, transit ridership, and route choice are consistent with the travel times established in capacity restraint traffic assignment.

The constrained peak hour, and the free flow, or off-peak, travel speeds incorporated in the models are based upon actual field surveyed speeds and travel times. The last such survey was completed in 2000. The models estimate peak and off-peak travel times and utilize peak-travel times in trip distribution and modal choice of peak travel (work and school travel). Off-peak travel times are used in trip distribution and mode choice for off-peak travel (shopping and other travel).

The model steps of trip distribution and mode choice are directly sensitive to the price of travel, as well as travel time, including public transit travel time.

The consistency of the transportation system plan and the underlying land use plan is directly established, tested, and documented. First, the transportation plan is designed to serve the regional land use plan, which is an agreed upon desirable pattern of future land use and not a projected pattern of likely future land use. The transportation plan only includes highway and transit improvements which address existing needs and travel demands and those future needs and travel demands which are generated by the regional land use plan. Second, to test this consistency of the regional land use and transportation plans, all transportation improvements are mapped and compared to areas of existing and planned development under the land use plan, and areas which are to be protected under the plan from development. Third, an additional test of the consistency of the regional land use and transportation plans was the preparation of forecasts of the accessibility provided by the transportation plan to each subarea of the region, as defined by traffic analysis zones. The total level of accessibility provided by the transportation plan, and, as well, the incremental level of accessibility compared to a "no-build" transportation plan was compared to areas of existing and planned development under the regional land use plan, and areas under the plan which are to be protected from development.

The vehicle-miles of travel estimated by the models in the base year of its validation (2000-2001) have been compared to estimates prepared with the Highway Performance Monitoring System (HPMS), and it has been determined that the 2000 model estimate is consistent with the 2000 inventory estimate. In addition, the Commission has maintained for over 15 years procedures to estimate off-network roadway travel. The procedures have been periodically reevaluated and validated. Such procedures were developed as part of the first Statewide implementation plan for air quality, prepared by the Regional Planning Commission in 1978, and provide estimates for use in regional transportation system plan and State Implementation Plan preparation and conformity determination. The method is based on analyses which estimate off-network travel by calculating total intrazonal travel and trip lengths, based upon zone size and development distribution. The analyses indicate off-network travel represents about 9 percent of total travel. This is

consistent with independent highway performance monitoring system estimates. Off-network travel is estimated for each alternative by factoring network travel forecasts by approximately 10 percent.

Also, for use in capacity restrained traffic assignment, as well as in trip distribution and mode choice, the simulation model estimates traffic speeds sensitive to the forecast traffic volume on each roadway segment for both peak-hour and average 24-hour conditions, the latter based upon the proportion of traffic traveling under peak-hour and congested conditions and the proportion of traffic traveling under off-peak conditions. The estimated congested traffic speeds are calculated on the basis of a model calibrated using inventoried speeds and congestion which relates reductions in speed to the ratio of traffic volume to design capacity. The model was validated through comparison of model-estimated speeds to actual arterial street and highway segment operating speeds.

Conformity Determination Criteria--Consistency with Motor Vehicle Emissions Budget

The test of transportation plan and program conformity requires that the transportation system emissions forecasts under the transportation plan and transportation improvement program must be consistent with, that is, equal to, or less than, the transportation systems emissions budget, or "motor vehicle emissions budget," in the redesignation and maintenance State Implementation Plan for the six-county nonattainment area for ozone standard. (The motor vehicle emissions budget must be determined to be adequate by the U.S. Environmental Protection Agency.)

With respect to the six county area, the State Implementation Plan for the eight hour ozone standard for this conformity analysis is the attainment demonstration submitted to USEPA in September 2009 with volatile organic compounds and nitrogen oxides emission budgets for 2012 and 2020. These budgets have been determined by USEPA to be adequate for the transportation plan and program test of conformity under the eight hour standard.

With regard to the three county PM_{2.5} nonattainment area, the test for transportation plan and program conformity is that forecast year emission estimates must be less than the baseline (year 2008) emission estimated for PM_{2.5}, NO_x, and VOC (40 CFR 93.119). The estimate of year 2008 emissions is based on traffic count data published annually by the Wisconsin Department of Transportation.

The transportation system emissions attendant to the regional transportation system plan through the year 2035 and 2009-2012 transportation improvement program were forecast through application of the Commission travel and traffic simulation models to the transportation system plan and improvement program under the year 2035 population, households, and employment forecasts and regional land use plan. Table 8 presents the forecast vehicle-miles of travel attendant to the forecast years of 2012, 2020, 2030, and 2035. The transportation plan projects incorporated in each forecast year were listed in Tables 2 (transit) and 4 (arterial street and highway).

The year 2009-2012 transportation improvement program is consistent with the year 2035 regional transportation system plan and the plan's implementation schedule. All year 2009-2012 transportation improvement program projects, that is, projects with air quality impacts, are included in the plan. Also, the year 2009-2012 transportation improvement program includes all projects essential to implement the plan on schedule. The satisfaction of these two tests are demonstrated in Tables 4 and 9.

Table 4 lists all projects with air quality impact proposed in the regional transportation plan, along with the plan-recommended implementation schedule, and identifies the plan projects which are included in the year 2009-2012 transportation improvement programs.

^a The vehicle miles of travel set forth in this table represent arterial vehicle miles of travel only. Nonarterial summer weekday vehicle miles of travel would increase the total summer weekday vehicle miles of travel by approximately 10 percent.

^b Summer average weekday traffic is estimated to 6 percent greater than average weekday traffic based upon analysis of 2001-2002 traffic count data from locations on freeways, other state trunk highways, and county and municipal arterials in Southeastern Wisconsin.

					STATE	0.0	0.0	0.0	0.0	0.0	
					FEDERAL	3,900.0	0.0	0.0	0.0	3,900.0	
					TOTAL	3,900.0	0.0	0.0	0.0	3,900.0	

Table 9 lists all projects with air quality impact, so-called “nonexempt” projects in the year 2009-2012 transportation improvement program and confirms that they are included in the regional transportation system plan and confirms that their schedule in the improvement program is consistent with their schedule for project completion proposed in the transportation plan.⁵

Table 10 presents for the years 2012, 2020, 2030, and 2035 forecast volatile organic compound and nitrogen oxide emissions from the transportation system within the six county ozone nonattainment area under the regional transportation plan and year 2009-2012 transportation improvement program, and compares those forecast emissions to the year 2012 and 2020 transportation system emission budgets included in the Wisconsin Department of Natural Resources redesignation and maintenance State Implementation Plan for the eight hour ozone standard submitted to USEPA in September 2009, which have been determined to be adequate for conformity determinations. In all cases, the transportation plan and program forecast emissions are less than the emissions budgets in the State Implementation Plan; thus, this conformity criteria is fully met for the eight hour ozone standards by the regional transportation plan and 2009-2012 transportation improvement program.

Table 11 presents for the year 2012, 2020, 2030, and 2035 forecast VOC, NO_x and PM_{2.5} emissions from the transportation system within the three county PM_{2.5} nonattainment area under the regional transportation plan and year 2009-2012 Transportation Improvement Program, and compares the forecast emissions to the base year 2008 estimated emissions. In all cases, the transportation plan and program forecast emissions are less than the estimated year 2008 emissions utilized in the build no greater than baseline emissions test (40 CFR 93.119); thus, this conformity criteria is fully met for the PM_{2.5} standard by the regional transportation plan and 2009-2012 transportation improvement program.

As described earlier in this report, the year 2009-2012 transportation improvement program is consistent with the regional transportation system plan and the plan’s implementation schedule. All year 2009-2012 transportation improvement program projects, that is, projects with air quality impacts, are included in the plan. Also, the year 2009-2012 transportation improvement program includes all projects essential to implement the regional transportation plan on schedule. The satisfaction of these two tests have been demonstrated in Tables 4 and 9.

* * *

⁵All 2009-2012 transportation improvement program projects are listed in Appendix B of this report.

Table 10

**COMPARISON OF FORECAST FUTURE AIR POLLUTANT EMISSIONS FROM THE
TRANSPORTATION SYSTEM OF SOUTHEASTERN WISCONSIN UNDER THE YEAR 2035 REGIONAL
TRANSPORTATION SYSTEM PLAN AND YEAR 2009-2012 TRANSPORTATION IMPROVEMENT
PROGRAM (TIP) TO THE AIR POLLUTANT TRANSPORTATION SYSTEM EMISSION
BUDGETS UNDER THE EIGHT HOUR OZONE MAINTENANCE
STATE IMPLEMENTATION PLAN FOR AIR QUALITY (SIP)**

Forecast Year	Six County Area ^a	
	Volatile Organic Compounds ^{b,c} (Tons per Hot Summer Weekday) Eight Hour SIP Budget (22.66 tons – 2012 14.91 tons – 2020) Year 2035 Plan and 2009-2012 TIP Emissions Forecast	Nitrogen Oxides ^{b,c} (Tons per Hot Summer Weekday) Eight Hour SIP Budget (47.27 tons – 2012 20.41 tons – 2020) Year 2035 Plan and 2009-2012 TIP Emissions Forecast
2012	20.15	42.09
2020	12.95	17.72
2030	12.62	12.48
2035	12.85	12.14

^a Kenosha, Milwaukee, Ozaukee, Racine, Washington, and Waukesha Counties.

^b The emissions forecasts under the plan are pursuant to Federal regulations to also assume implementation of the 2009-2012 transportation improvement program, which has been prepared to continue implementation of the plan. Since the plan and program are entirely consistent with respect to "non-exempt" projects, or projects of air quality impact, including highway and transit capacity improvement and expansion, the emissions forecast attendant to the plan are basically the same as the plan and program combined.

^c Estimated 1990 emissions are 145.6 tons of volatile organic compounds and 128.2 tons of nitrogen oxides. Estimated 1999 emissions are 56.4 tons of volatile organic compounds and 110.0 tons of nitrogen oxides. Estimated 2008 emissions are 28.77 tons of volatile organic compounds and 65.81 tons of nitrogen oxides.

APPENDICES

Appendix A

CONFORMITY ANALYSIS OF THE YEAR 2035 REGIONAL TRANSPORTATION PLAN AS AMENDED AND YEAR 2009-2012 TRANSPORTATION IMPROVEMENT PROGRAM

- Years for Analysis [Years For Which Projection of Emissions Will Be Made For The Regional Transportation Improvement Program (TIP)/Transportation Plan (RTP)], Planning Assumptions and Forecasts, and Travel Simulation Models
 - Proposed years are 2012, 2020, 2030, and 2035. Emission projections will be based on SEWRPC intermediate demographic and economic growth forecasts from year 2035 regional land use plan.
 - Emission projections will be based upon travel and traffic forecasts prepared from the Commission's current travel simulation models—developed with 2000-2001 data and have been validated to the years 2000-2001.
- Emission Budget Tests for Conformity
 - 2012, 2020, 2030, and 2035 TIP/RTP VOC and NO_x emission forecasts must not exceed the 2012 and 2020 VOC and NO_x Budgets
 - Emission estimates will be compared to the proposed NO_x and VOC budgets included in the 8-hour ozone nonattainment area attainment demonstration and redesignation request submitted to US EPA in September 2009. It is anticipated that the US EPA will be making a finding of adequacy of the following VOC and NO_x budgets during this analysis.
 - Nitrogen Oxides (NO_x) – 47.27 tons for 2012 and 20.41 tons for 2020
 - Volatile Organic Compounds (VOC) – 22.66 tons for 2012 and 14.91 for 2020
- Build No Greater than Baseline Year 2008 Tests for Conformity
 - Three county Fine Particle (PM_{2.5}) nonattainment area (Milwaukee, Racine, and Waukesha Counties)
 - PM_{2.5} – Year 2008 baseline estimate is 0.93 tons
 - NO_x – Year 2008 baseline estimate is 49.52 tons
 - VOC – Year 2008 baseline estimate is 22.34 tons
 - 2012, 2020, 2030, and 2035 TIP/RTP PM_{2.5}, NO_x, and VOC emission forecasts must not exceed the year 2008 PM_{2.5}, NO_x, and VOC baseline emission estimates
- The conformity analysis will include a comparison of the projected growth in vehicle-miles of travel (VMT) in the SIP to estimates of actual growth in VMT through 2008 in Southeastern Wisconsin prepared by WisDOT and based on actual traffic counts (HPMS universe counts)
- Emission model will be Mobile 6.2 and emission factors will be provided by WisDNR for years 2008, 2012, 2020, 2030, and 2035. (Provided 3/1/2010, and 3/26/2010)

APPENDIX B

2009 THROUGH 2012 TRANSPORTATION IMPROVEMENT PROGRAM FOR SOUTHEASTERN WISCONSIN

Appendix B is the list of projects constituting the transportation improvement program for the seven county Southeastern Wisconsin Region.

Table B-1: The TIP for the Milwaukee Transportation Management Area

Table B-2: The TIP for the Kenosha County, Racine County, and Walworth County Transportation Management Area

Table B-3: Projects Potentially Utilizing Federal American Recovery and Reinvestment Act of 2009 Funding not Currently Planned to Utilize Other Federal Funding Sources in 2009 through 2012

Within each table, projects are listed in order by implementing agency--The State of Wisconsin first, then the appropriate county in alphabetical order; and then by municipality in alphabetical order within county. The TIP projects of each implementing agency are arranged in order by the following project categories: highway preservation, highway improvement, highway expansion, transit preservation, transit improvement, transit expansion, highway safety, off-system highway improvement, and highway-related environmental enhancement.

An explanation of the abbreviations used in the Appendix follows:

Source of Funds (federal and state fund codes)

BRF	Bridge Replacement Funds
CMAQ	Congestion Mitigation and Air Quality Improvement Funds
COMB	Combination of FHWA and FTA Funds
FAI(4R)	Federal Aid Interstate Funds
FED REC	Federal American Recovery and Reinvestment Act of 2009 Funds
FRA	Federal Railroad Administration Funds
FTA 5303	FTA Section 5303 Funds--Metropolitan Planning Program
FTA 5309	FTA Section 5309 Funds--Capital Program
FTA 5307	FTA Section 5307 Funds--Urban Formula Program
FTA 5310	FTA Section 5310 Funds--Elderly and Persons with Disabilities Program
FTA 5311	FTA Section 5311 Funds--Nonurban Area Formula Program
FTA 5313/5314	FTA Section 5313/5314 Funds--State Planning and Research Program
FTA 5316	FTA Section 5316 Funds--Job Access and Reverse Commute
FTA 5317	FTA Section 5317 Funds--New Freedom Program
GCM	Gary, Chicago, Milwaukee Corridor Intelligent Transportation System Funds
IH-C/S	Interstate Highway - Completion or Substitution Funds
IH-M	Interstate Highway - Maintenance Funds
LRIP	Local Road Improvement Program
NHS	National Highway System Funds
OTHER FED	Federal funding programs not sponsored by FHWA or FTA (Economic Development Funds and Urban Development Action Grants are examples)
OTHER FHWA	FHWA funding program other than those listed (includes certain limited demonstration funds)
SIB	State Investment Bank Funds
SRTS	Safe Routes to School Funds
STP-E	Surface Transportation Program - Enhancement Funds
STP-M	Surface Transportation Program - Milwaukee Urbanized Area Funds
STP-O	Surface Transportation Program - Other Funds (Rural, other urban and urbanized areas, discretionary)

STP-S Surface Transportation Program - Safety Funds
 TEA Transportation Economic Assistance

Project No.

1 Project number for project in 2009-2012 TIP
 (1) 2007-2010 TIP project number for project contained in 2007-2010 TIP

Project Description

CTH County trunk highway
 IH Interstate highway
 STH State trunk highway
 M or MI Miles

"C/" represents "City of"

"V/" represents "Village of"

"T/" represents "Town of"

Project Type

HP Highway Preservation
 HI Highway Improvement
 HE Highway Expansion
 TP Transit Preservation
 TI Transit Improvement
 TE Transit Expansion
 EE Environmental Enhancement
 HS Highway Safety
 OH Off Arterial Highway System

Cost

PE Preliminary engineering
 ROW Right-of-way
 CONST Construction
 OTHER Purchase and/or installation of equipment

Air Quality Status

EXEMPT Project implementation is exempt from air quality conformity assessment. Such projects are considered to have no impact on air quality.

NON-EXEMPT Project implementation requires air quality conformity assessment. However, project is considered to have a minimal impact on air quality and does not need to be included in a regional emissions analysis supporting an air quality conformity assessment.

NON-EXEMPT Project implementation requires air quality conformity assessment. Project is considered to have an impact on air quality and must be included in a regional emissions analysis supporting an air quality conformity assessment.

Economic Recovery Act

R Project indicated by the project sponsor as potentially being funded by the American Recovery and Reinvestment Act of 2009.

TABLE B

ENDNOTES

- 28^a Preliminary engineering for the reconstruction of South 108th Street between 550 feet north of West Edgerton Avenue and West Forest Home Avenue will consider alternatives with and without widening to provide additional capacity. South 108th Street between West Forest Home Avenue and West College Avenue will be reconstructed to its existing capacity.
- 68^b USH 45/STH 100 between College Avenue and West Drexel Avenue will be reconstructed to its existing capacity. USH 45/STH 100 between West Drexel Avenue and West Loomis Road will be widened to provide additional capacity.
- 76^c
432^c
516^c
517^c Projects are to be funded with Federal Railroad Administration funds and are included for informational purposes.
- 99^d The Southeastern Wisconsin Regional Planning Commission is acting as staff to the Southeastern Wisconsin Regional Transit Authority (RTA) and an intergovernmental partnership of the Cities and Counties of Kenosha, Milwaukee, and Racine, the Wisconsin Department of Transportation and the Commission. The Commission has been the applicant on their behalf for Federal Administration (FTA) grants of \$3,200,000 in 2004 and \$6,922,258 in 2007. Planning is underway for the project including alternatives analysis and draft environmental impact statement. Planning will be continued through 2009 with preliminary and final engineering to proceed upon FTA approval. At the request of the FTA, this project shows the FTA 5309 funds are anticipated to be encumbered in 2009. The Commission anticipates an annual expenditure of approximately \$250,000 each in local and state funds and approximately \$2,000,000 in federal funds for the years 2009 through 2012. Project also shows \$6,000,000 of Congestion Mitigation and Air Quality program funds in 2010, with the necessary state and local shares. These funds may be used to assist in funding preliminary engineering and construction when needed following FTA approval.
- 120^e
121^e The year 2035 regional transportation system plan recommends that right-of-way along West College Avenue (CTH ZZ) between South 27th Street and West Loomis Road (STH 36) be reserved to provide for potential future widening. The preliminary engineering programmed for this segment will consider alternatives with and without widening to provide additional capacity.
- 152^f The Federal funds for this project are provided through the annual allocation of FTA Section 5307 urbanized area formula transit assistance funds apportioned to the public transit operators in the

TABLE B-1

ENDNOTES (continued)

Milwaukee urbanized area. Each transit operator contributes a portion of its allocation—amounting to less than one percent in 2008—to provide funds for this project. Milwaukee County has agreed to be the applicant on behalf of SEWRPC.

- 155^g Initiation of preliminary engineering may not proceed until a locally preferred alternative has been adopted by the project sponsor; the project sponsor has requested that SEWRPC amend the regional transportation system plan to include the locally preferred alternative; the regional transportation system plan has been amended; and the approval of the Federal Transit Administration has been obtained. The Federal funding sources include \$5,100,000 of Interstate Cost Estimate funds.
- 916^h Project is to be funded with \$1,500,600 in Federal Highway Administration American Recovery and Reinvestment Act funds, and the remainder of the project is to be funded with Federal Highway Administration Surface Transportation Program - Milwaukee Urbanized Area and local funds.
- 875ⁱ Project is to be funded with \$331,250 in Federal Highway Administration American Recovery and Reinvestment Act funds, and the remainder of the project is to be funded with Federal Highway Administration Surface Transportation Program - Milwaukee Urbanized Area and local funds.
- 728^j Project is to be funded with \$782,300 in Federal Highway Administration American Recovery and Reinvestment Act funds, and the remainder of the project is to be funded with Federal Highway Administration Surface Transportation Program - Milwaukee Urbanized Area and local funds.
- 1002^k Project is to be funded with \$13,300,000 in Federal Highway Administration American Recovery and Reinvestment Act Transportation Investment Generating Economic Recovery (TIGER) funds and the remainder with local funds.
- 209^l Project is to be funded with \$3,425,000 in Federal Highway Administration American Recovery and Reinvestment Act funds, and the remainder of the project is to be funded with Federal Highway Administration Surface Transportation Program - Milwaukee Urbanized Area and local funds.

TABLE B-1

ENDNOTES (continued)

- 920^m Project is to be funded with \$799,900 in Federal Highway Administration American Recovery and Reinvestment Act funds, and the remainder of the project is to be funded with Federal Highway Administration Surface Transportation Program - Milwaukee Urbanized Area and local funds.
- 217ⁿ Project is to be funded with \$2,373,900 in Federal Highway Administration American Recovery and Reinvestment Act funds, and the remainder of the project is to be funded with Federal Highway Administration Surface Transportation Program - Milwaukee Urbanized Area and local funds.
- 1003^o Project is to be funded with \$960,000 in Federal Aid Bridge Replacement funds, \$8,200,000 in Federal Highway Administration American Recovery Reinvestment Act Transportation Investment Generating Economic Recovery (TIGER) funds, and the remainder with local funds.
- 924^p Project is to be funded with \$401,600 in Federal Highway Administration American Recovery and Reinvestment Act funds, and the remainder of the project is to be funded with Federal Highway Administration Surface Transportation Program - Milwaukee Urbanized Area and local funds.
- 231^q Project is to be funded with \$1,969,230 in Federal Highway Administration American Recovery and Reinvestment Act funds, and the remainder of the project is to be funded with Federal Highway Administration Surface Transportation Program – Milwaukee Urbanized Area and local funds.
- 905^r Initiation of preliminary engineering would not proceed until a locally preferred alternative has been adopted by the project sponsor (City of Milwaukee); the project sponsor has requested that SEWRPC amend the regional transportation system plan to include the locally preferred alternative; and the regional transportation system plan has been amended. The regional plan identifies the streetcar project as a potential express transit guideway improvement, and calls for the planning study underway to be completed and a locally preferred alternative be identified.
- 925^s Project is to be funded with \$364,100 in Federal Highway Administration American Recovery and Reinvestment Act funds, and the remainder of the project is to be funded with Federal Highway

TABLE B-1

ENDNOTES (continued)

Administration Surface Transportation Program - Milwaukee Urbanized Area and local funds.

- 926^t Project is to be funded with \$553,500 in Federal Highway Administration American Recovery and Reinvestment Act funds, and the remainder of the project is to be funded with Federal Highway Administration Surface Transportation Program - Milwaukee Urbanized Area and local funds.
- 927^u Project is to be funded with \$968,400 in Federal Highway Administration American Recovery and Reinvestment Act funds, and the remainder of the project is to be funded with Federal Highway Administration Surface Transportation Program - Enhancement and local funds.
- 862^v Project is to be funded with \$987,500 in Federal Highway Administration American Recovery and Reinvestment Act funds, and the remainder of the project is to be funded with Federal Highway Administration Surface Transportation Program - Milwaukee Urbanized Area and local funds.
- 863^w Project is to be funded with \$295,000 in Federal Highway Administration American Recovery and Reinvestment Act funds, and the remainder of the project is to be funded with Federal Highway Administration Surface Transportation Program – Milwaukee Urbanized Area and local funds.
- 882^x Project is included for informational purposes. The estimated project cost listed for this project includes portions outside of the Region. Thus, fiscal constraint for this project will be accounted for in the statewide transportation improvement program.
- 885^y Project is to be funded with \$512,500 in Federal Highway Administration American Recovery and Reinvestment Act funds, and the remainder of the project is to be funded with Federal Highway Administration Surface Transportation Program - Milwaukee Urbanized Area and local funds.
- 886^z Project is to be funded with \$275,000 in Federal Highway Administration American Recovery and Reinvestment Act funds, and the remainder of the project is to be funded with Federal Highway Administration Surface Transportation Program - Milwaukee Urbanized Area and local funds.

TABLE B-1

ENDNOTES (continued)

- 448^{aa} Project is to be funded with \$1,250,000 in Federal Highway Administration American Recovery and Reinvestment Act funds, and the remainder of the project is to be funded with Federal Highway Administration Surface Transportation Program - Milwaukee Urbanized Area and local funds.
- 457^{bb} The City of Waukesha is the administrator.
- 800^{cc} Project is to be funded with \$1,143,750 in Federal Highway Administration American Recovery and Reinvestment Act funds, and the remainder of the project is to be funded with Federal Highway Administration Surface Transportation Program - Milwaukee Urbanized Area and local funds.
- 689^{dd} Project is to be funded with \$1,011,180 in Federal Highway Administration American Recovery and Reinvestment Act funds, and the remainder of the project is to be funded with Federal Highway Administration Surface Transportation Program - Other and local funds.
- 537^{ee} The creation of an RTA with dedicated local funding that would address local public transit in Kenosha County would increase the funding available to the Kenosha Area Transit System and enable the system to expand service in the later years of the period covered in this TIP.
- 890^{ff} Project is to be funded with \$307,500 in Federal Highway Administration American Recovery and Reinvestment Act funds, and the remainder of the project is to be funded with Federal Highway Administration Surface Transportation Program - Other and local funds.
- 934^{gg} Project is to be funded with \$410,800 in Federal Highway Administration American Recovery and Reinvestment Act funds, and the remainder of the project is to be funded with Federal Highway Administration Surface Transportation Program - Other and local funds.
- 893^{hh} Project is to be funded with \$195,100 in Federal Highway Administration American Recovery and Reinvestment Act funds, and the remainder of the project is to be funded with Federal Highway Administration Surface Transportation Program - Other and local funds.

TABLE B-1

ENDNOTES (continued)

- 605ⁱⁱ Project is to be funded with \$442,070 in Federal Highway Administration American Recovery and Reinvestment Act funds, and the remainder of the project is to be funded with Federal Highway Administration Surface Transportation Program - Other and local funds.

Appendix C

Highlighting indicates year traffic counts taken. Milwaukee County an anomaly, with about one-third of county counted each year.

City of Milwaukee counts to state standards begun in 1993. HPMS revised in 1993.

Traffic counts for HPMS updated between actual count years by statewide growth factor.

1994 HPMS VMT for District 2, especially Milwaukee and Waukesha counties, probably low due to automation problems in getting count data to transfer between computer files.

Average Daily VMT estimates taken directly from HPMS master file, not adjusted to statewide control total (which includes local roads.) (Thus the county estimates will match final adjusted county estimates published on the WisDOT website.)

Most important annual growth rates for air quality purposes highlighted at bottom right.

APPENDIX D

REVIEW AGENCY CORRESPONDENCE REGARDING THE CONFORMITY OF THE YEAR 2009-2012 TRANSPORTATION IMPROVEMENT PROGRAM AND THE REGIONAL TRANSPORTATION PLAN AND WITH THE STATE IMPLEMENTATION PLAN FOR AIR QUALITY

Federal Highway Administration
 525 Junction Rd, Suite 8000
 Madison, WI 53717-2157

Federal Transit Administration
 200 W. Adams Street, Suite 320
 Chicago, IL 60606-5232

June 16, 2010

Mr. Kenneth R. Yunker, Executive Director
 Southeastern Wisconsin Regional Planning Commission
 W239 N1812 Rockwood Drive
 P.O. Box 1607
 Waukesha, WI 53187-1607

Dear Mr. Yunker:

The Federal Highway Administration and Federal Transit Administration have jointly reviewed the Southeastern Wisconsin Regional Planning Commission (SEWRPC) 2035 Regional Transportation Plan (RTP) as updated by SEWRPC Memorandum *Review, Update, and Reaffirmation of the Year 2035 Regional Transportation Plan* and the 2009-2012 Transportation Improvement Program (TIP) as amended and air quality conformity analysis submitted on May 12, 2010. The plan, program, and analysis apply to the six-county southeastern Wisconsin metropolitan planning area, which is designated as a moderate nonattainment area under the eight-hour ozone National Ambient Air Quality Standard and the three-county area (Milwaukee, Waukesha, and Racine Counties) designated nonattainment under the fine particulate (PM_{2.5}) NAAQS. The analysis addresses conformity requirements under the eight-hour ozone standard subject to the Wisconsin 8-Hour Ozone Redesignation Request and Maintenance Plan submitted to EPA in September 2009 and the 2006 PM_{2.5} standard subject to the interim emissions tests under 40 CFR 93.119. Our reviews compared the RTP and TIP with the requirements of Titles 23 and 49 of the United States Code, the 1990 Clean Air Act Amendments (CAAA), and related implementing regulations. The air quality conformity portions of the analysis and review were coordinated with the U.S. Environmental Protection Agency (EPA), the Wisconsin Department of Transportation (WisDOT), and the Wisconsin Department of Natural Resources (WDNR).

The analysis demonstrates that motor vehicle emissions based on the planned transportation system are projected to remain within the motor vehicle emissions budgets associated with Wisconsin 8-Hour Ozone Redesignation Request and Maintenance Plan determined to be adequate for conformity purposes by USEPA on May 21, 2010. Transportation emissions are also projected to remain below the 2008 baseline emissions associated with the PM_{2.5} standard.

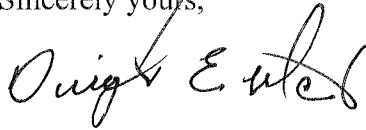

Accordingly, we jointly determine the SEWRPC RTP and TIP to be in conformance with the transportation planning requirements of Titles 23 and 49 U.S.C., the CAAA, and related regulations.

This conformity finding is valid for a period of four years. A new air quality conformity determination will be required if either the RTP or TIP is modified by adding, removing or changing the implementation schedule of a regionally significant or non-exempt project or if any other triggering events specified in 40 CFR 93.104 occur. Conformity can also lapse if the RTP or TIP is not updated within the required renewal period of four years.

Should you have any questions regarding this conformity finding, please contact me at (608) 829-7518.

Sincerely yours,

Dwight E. McComb
Systems Planning & Performance Engineer

SUBJECT: Draft "Assessment of Conformity of the Year 2035 Regional Transportation Plan and the year 2009-2012 Transportation Improvement Program with Respect to the State of Wisconsin Air Quality Implementation Plan - Six County Southeastern Wisconsin Ozone Nonattainment Area and Three County Fine Particulate (PM_{2.5}) Nonattainment Area" for Conformity Technical Work Group Review

Dear Mr. McComb:

The Wisconsin Department of Transportation (WisDOT) appreciates the opportunity to review the Southeastern Wisconsin Regional Planning Commission's (SEWRPC) draft Assessment of Conformity of the Year 2035 referenced above.

WisDOT has completed its review of SEWRPC's Assessment of Conformity of the Year 2035 RTP and the 2009 - 2012 TIP. The RTP and TIP conformance pertain to the eight hour ozone standard for the six-county (moderate) nonattainment area consisting of Kenosha, Milwaukee, Ozaukee, Racine, Washington, and Waukesha counties and the three county PM_{2.5} nonattainment area consisting of Milwaukee, Racine, and Waukesha counties.

WisDOT's review has focused on SEWRPC's demonstration that it had met the criteria and procedural requirements stipulated in the amended Transportation Conformity Rule issued in the Federal Register, January 24, 2008, 40 CFR, Parts 51 and 93. SEWRPC's planning assumptions, its travel and emissions modeling assumptions and results derived in part through collaboration with the Department of Natural Resources (WDNR) and WisDOT, and the results of the budget test, demonstrate that the anticipated emissions from the Year 2035 RTP and its implementing 2009 - 2012 TIP are consistent with motor vehicle emissions budgets included in the WDNR's redesignation and maintenance SIP submitted to USEPA in September 2009 which have been determined to be adequate for conformity determinations.

A comparison of the forecasted volatile organic compounds (VOCs) and nitrogen oxide (NO_x) emissions from the Plan with transportation system emissions budget in the redesignation and maintenance SIP show that for each forecast year (2012, 2020, 2030, and 2035) the emissions for both ozone precursors, NO_x and VOCs, are less than the transportation system emissions budget in the redesignation and maintenance SIP.

As for the three county PM_{2.5} nonattainment area, the forecast year emission estimates must be less than the baseline (year 2008) emission estimated for PM_{2.5}, NO_x, and VOC (40 CFR 93.119). The estimate of year

2008 emissions is based on traffic count data published annually by the WisDOT. The VOC, NOx and PM_{2.5} emissions forecasts (2012, 2020, 2030, and 2035) from the transportation system within the three county PM_{2.5} nonattainment area under the RTP and year 2009-2012 TIP are less than the estimated year 2008 emissions utilized in the build no greater than baseline emissions test (40 CFR 93.119).

Based on the results of these analyses, WisDOT concurs with SEWRPC's conclusion that the RTP and the 2009-2012 TIP are in conformance with the State of Wisconsin Air Quality Redesignation and Maintenance Plan for the 8-hour ozone standard and the 2008 Baseline year emissions for the PM_{2.5} standard.

Thank you for the opportunity to review the Assessment of Conformity. We recognize the public health benefits associated with reduced emissions from all sectors. These are important benefits and goals that we continue to work towards. If you have any questions, please contact Patricia Trainer of my staff at 608/264-7330.

Sincerely,

Eugene S. Johnson, Director

JUN 16 2010

REPLY TO THE ATTENTION OF:

AR-18J

George Poirier
Division Administrator
Federal Highway Administration
Wisconsin Division
525 Junction Road, Suite 8000
Madison, Wisconsin 53717

Dear Mr. Poirier:

The U.S. Environmental Protection Agency has completed its review of the conformity determinations for the amended 2009-2012 Transportation Improvement Program (TIP) and 2035 Regional System Plan (Plan) for the Milwaukee metropolitan area. The TIP and Plan were prepared by the Southeastern Wisconsin Regional Planning Commission (SEWRPC). This letter provides the results of our review of the conformity determinations.

The Milwaukee metropolitan area is currently designated nonattainment for the eight-hour ozone standard and for fine particulates (PM_{2.5}). This area has approved ozone Motor Vehicle Emissions Budgets (Budgets) for Volatile Organic Compounds (VOC) and Oxides of Nitrogen (NO_x) for 2012 and 2020. PM_{2.5} nonattainment areas that are not covered by a budget may demonstrate conformity by meeting either an Action/Baseline test, or an Action scenario less than 2008 mobile source emissions levels test.

The Wisconsin Department of Natural Resources provided SEWRPC with emissions factors (EF) generated by EPA's MOBILE6 model for the regional analyses. These EFs were developed using the latest transportation planning assumptions for this area. Emissions were calculated for the years 2012, 2020, 2030 and 2035. This area demonstrated consistency with the Budgets for VOC, and NO_x. The PM_{2.5} and NO_x emissions for the PM_{2.5} nonattainment area were less than 2008 levels. The conformity analyses were developed through the interagency consultation process which included representatives of the local, State, and Federal governments.

In summary, the SEWRPC TIP and the Plan conformity determinations for the Milwaukee area meet the requirements of the conformity regulations. EPA recommends that these conformity determinations be approved. If you have any questions, feel free to contact Michael Leslie, of my staff, at (312) 353-6680.

Sincerely yours,

SUBJECT: Review of Southeastern Wisconsin Regional Planning Commission's Transportation Conformity Findings for Year 2035 RTP and 2009 - 2012 TIP

Dear Mr. Bortzer:

We are writing to acknowledge the Wisconsin Department of Natural Resources-Bureau of Air Management's review of and approval of the Southeastern Wisconsin Regional Planning Commission's (SEWRPC) Transportation Conformity determination for the year 2035 Regional Transportation System Plan (RTP) and the 2009 - 2012 Transportation Improvement Program (TIP). The TIP and the RTP are considered to be in conformity with the State of Wisconsin Air Quality Redesignation and Maintenance Plan for the 8-hour ozone standard and the 2008 Baseline year emissions for the PM 2.5 standard.

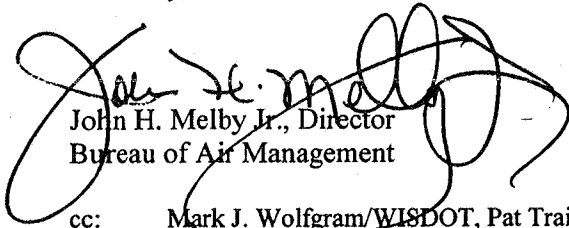

The results of SEWRPC's analysis indicate that the transportation plan and TIP for the region achieve mobile source emissions below those allowed for in the Ozone Redesignation and Maintenance SIP plan the DNR submitted for the southeastern Wisconsin ozone nonattainment area. The EPA determined that the motor vehicle budgets, derived from the MOBILE6 Model, were adequate for conformity purposes on May 21, 2010. The MOBILE6 based motor vehicle emission budgets were for Door, Kenosha, Manitowoc, Milwaukee, Ozaukee, Racine, Sheboygan, Washington, and Waukesha Counties. SEWRPC incorporates a Vehicle Miles Traveled (VMT) growth rate of approximately 1.1% per year to the year 2012, 1.0% VMT growth from 2012 to 2020, and 0.6% VMT growth from 2020 to 2035. The growth rate represents the official anticipated intermediate economic and demographic growth forecasts for the region and the implementation of various public transit and other Transportation Control Measure (TCM) activities. Our Eight Hour Ozone Redesignation and Maintenance plan incorporates the higher VMT growth rate of 1.6 % to year 2012 and 1.1% increase from 2012 to 2020 to reflect the high growth rates and the possibility that in the near term planning horizon southeastern Wisconsin could continue to experience economic and employment trends at higher than anticipated rates.

SEWRPC's analysis for the 2035 RTP and 2009-2012 TIP emissions remain within the mobile source emission budgets of 22.7 and 14.9 tons of volatile organic compounds (VOC) / summer weekday, for years 2012 and 2020 respectively, and 47.3 and 20.4 tons of nitrogen oxides (NOx) / summer weekday, for years 2012 and 2020 respectively. SEWRPC's analysis for the 2035 RTP and 200-2012 TIP emissions are also below the 2008 baseline emissions established for the interim conformity test for the PM 2.5 standard.

Despite the relative ease by which SEWRPC demonstrated conformity with both the ozone and PM 2.5 standards, we have concerns with current and future support of the Southeast Wisconsin Transit. Since 2005, transit levels have decreased 4.5% while transit fare prices have increased 29%. While local governments must make tough financial decisions with respects to operating budgets, we maintain that dedicated transit funding is not only good for Wisconsin's economic development, but plays an important role in improving our air quality. With newer ozone standards looming, a PM 2.5 State Implementation Plan due in 2013 and mobile source emissions increases from the MOVES model, we are very interested in working with our transportation stakeholders to develop an effective strategy for implementing the transit component of the SEWRPC Transportation Plan

Should you have any questions or comments concerning our review and concurrence with the assessment of conformity document, please call Mike Friedlander of my staff at (608) 267-0806.

Sincerely,

John H. Melby Jr., Director
Bureau of Air Management
